FEATURED INFORMATION

Q&A with Third Generation Ocean Explorer and Environmental Advocate Fabien Cousteau

Growing up on the salt-stained decks of his famous Grandfather's ships, Calypso and Alcyone, Fabien Cousteau was destined to follow in the family footsteps of exploring and tirelessly working to protect our planet's immense and endangered marine habitats...

LEARN MORE

Hurricanes and the Oil Spill

What will the hurricane do to the oil slick in the Gulf?

- The high winds and seas will mix and "weather" the oil which can help accelerate the biodegradation process.
- The high winds may distribute oil over a wider area, but it is difficult to model exactly where the oil may be transported.
- Movement of oil would depend greatly on the track of the hurricane.
- Storms' surges may carry oil into the coastline and inland as far as the surge reaches. Debris resulting from the hurricane may be contaminated by oil from the Deepwater Horizon incident, but also from other oil releases that may occur during the storm.
