**UNITED STATES DISTRICT COURT
CENTRAL DISTRICT OF CALIFORNIA**

JAVIER A. G.,¹

Plaintiff,

v.

ANDREW M. SAUL, Commissioner of
Social Security,

Defendant.

Case No. SACV 19-2341 PVC

**MEMORANDUM DECISION AND
ORDER**

Javier A. G. (“Plaintiff”) appeals from the final decision of the Commissioner of Social Security (“Commissioner” or “Agency”) denying his application for Disability Insurance Benefits (“DIB”). The parties consented pursuant to 28 U.S.C. § 636(c) to the jurisdiction of the undersigned United States Magistrate Judge. (Dkt. Nos. 12-14). On September 11, 2020, the parties filed a Joint Stipulation outlining their respective positions. (Dkt. No. 22). For the reasons stated below, the decision of the Commissioner is REVERSED, and this case is REMANDED for further administrative proceedings consistent with this decision.

¹ The Court partially redacts Plaintiff’s name in compliance with Federal Rule of Civil Procedure 5.2(c)(2)(B) and the recommendation of the Committee on Court Administration and Case Management of the Judicial Conference of the United States.

I.
PROCEDURAL HISTORY

On June 9, 2016, Plaintiff filed an application for period of disability and disability insurance benefits pursuant to Title II of the Social Security Act (the “Act”), alleging a disability onset date of March 11, 2016. (AR 85, 87, 194-210). The Commissioner denied the application initially on August 17, 2016, (AR 23, 98-102), and upon reconsideration on October 11, 2016. (AR 23, 108-13). On August 14, 2018, Plaintiff, represented by counsel, appeared and testified at a hearing. (AR 43-72). The Administrative Law Judge (“ALJ”) issued an adverse decision on October 11, 2018, (AR 23-42), finding that Plaintiff was not disabled because he is capable of performing his past relevant work and, in the alternative, because there are jobs that exist in significant numbers in the national economy that he is capable of performing. (AR 37-38). On October 16, 2019, the Appeals Council denied Plaintiff’s request for review. (AR 1–8). This action followed on December 4, 2019. (Dkt. No. 1).

II.
ISSUE PRESENTED

On appeal, Plaintiff raises a single issue: whether the ALJ’s residual functional capacity assessment is supported by substantial evidence. (Joint Stip. at 4).

III.
DISCUSSION

A. Standard of Review

Under 42 U.S.C. § 405(g), a district court may review the Commissioner’s decision to deny benefits. “[The] court may set aside the Commissioner’s denial of benefits when the ALJ’s findings are based on legal error or are not supported by substantial evidence in the record as a whole.” *Aukland v. Massanari*, 257 F.3d 1033, 1035 (9th Cir. 2001); *see also Stout v. Comm’r, Soc. Sec. Admin.*, 454 F.3d 1050, 1052 (9th Cir. 2006); 42 U.S.C. §§ 405(g), 1383(c)(3). “Substantial evidence is more than a mere scintilla but less than a preponderance.” *Bayliss v. Barnhart*, 427 F.3d 1211, 1214 n.1 (9th Cir. 2005) (internal quotation marks and citation omitted). It is “such relevant evidence as a reasonable mind might accept as adequate to support a conclusion.” *Burch v. Barnhart*, 400 F.3d 676, 679 (9th Cir. 2005) (internal quotation marks and citation omitted); *accord Orn v. Astrue*, 495 F.3d 625, 630 (9th Cir. 2007). To determine whether substantial evidence supports a finding, the court must “consider the record as a whole, weighing both evidence that supports and evidence that detracts from the [Commissioner’s] conclusion.” *Aukland*, 257 F.3d at 1035 (citation omitted). If the evidence can reasonably support either affirming or reversing that conclusion, the court may not substitute its judgment for that of the Commissioner. *Reddick v. Chater*, 157 F.3d 715, 720-21 (9th Cir. 1998). “Although the ALJ’s analysis need not be extensive, the ALJ must provide some reasoning in order for [the court] to meaningfully determine whether the ALJ’s conclusions were supported by substantial evidence.” *Treichler v. Comm’r of Soc. Sec. Admin.*, 775 F.3d 1090, 1103 (9th Cir. 2014).

1 **B. The ALJ's Decision**

2
3 The ALJ employed the five-step sequential evaluation process and concluded that
4 Plaintiff was not disabled within the meaning of the Act. (AR 23-42). At step one, the
5 ALJ found that Plaintiff did not engage in substantial gainful activity from his alleged
6 onset date of March 11, 2016 through September 30, 2018, his last date insured. (AR 25).
7 At step two, the ALJ determined that through the last date insured, Plaintiff suffered from
8 the severe impairments of obesity; bilateral plantar fasciitis; lumbar spine degenerative
9 disc disease; tendinitis of the bilateral elbows; bilateral carpal tunnel syndrome;
10 impingement syndrome of the right shoulder; and osteoarthritis of the bilateral knees.²
11 (AR 26). At step three, the ALJ determined that through the date last insured, Plaintiff did
12 not have an impairment or combination of impairments that met or medically equaled the
13 severity of any of the listings enumerated in the regulations. (AR 27).

14
15 The ALJ then assessed Plaintiff's RFC and concluded that through the date last
16 insured, he could have performed medium work³ as defined in 20 C.F.R. § 404.1567(c),
17 with the following limitations:

18
19 [Plaintiff] can lift and carry 50 pounds occasionally and 25 pounds
20 frequently, stand and walk 6 hours in an 8-hour day, and sit 6 hours in an 8-
21 hour day; can occasionally climb ladders, ropes, scaffolds, ramps, and
22 stairs; can occasionally balance, kneel and crawl; can frequently stoop and
23 crouch; can frequently walk on uneven terrain and work at heights; can

24
25 ² The ALJ also found that Plaintiff's chronic cervical spine sprain; warts; hyperlipidemia;
26 elevated PSA; gastritis/abdominal pain; allergic rhinitis; benign prostatic hyperplasia with
27 urinary symptoms; presbyopia; left vitreous floaters; obstructive sleep apnea; umbilical
hernia; and left shoulder condition status post arthroscopy with distal clavicle resection
are non-severe impairments. (AR 26-27).

28 ³ "Medium work involves lifting no more than 50 pounds at a time with frequent lifting or
carrying of objects weight up to 25 pounds." 20 C.F.R. § 404.1567(c).

1 occasionally reach overhead with the bilateral arms; can frequently use feet
2 to operate foot controls; and can frequently handle and finger.

3
4 (AR 29). At step four, the ALJ concluded that through the last date insured, Plaintiff was
5 capable of performing his past relevant work as a Mental Retardation Aide (job coach) as
6 this work did not require the performance of work-related activities precluded by the
7 claimant's residual functional capacity. (AR 36). Although the ALJ found that Plaintiff
8 was capable of performing his past relevant work, she found in the alternative at step five
9 that given Plaintiff's RFC, age, education, work experience, and the VE's testimony,
10 through the date last insured there were jobs that existed in significant numbers in the
11 national economy that Plaintiff could have performed, including a stores laborer and
12 insulation packer. (AR 36-38). Accordingly, the ALJ found that Plaintiff was not under a
13 disability as defined in the Act from March 11, 2016, the alleged onset date, through
14 September 30, 2018, the date last insured. (AR 38).

15
16 **C. Discussion**

17
18 Plaintiff contends that the ALJ's RFC assessment was not supported by substantial
19 evidence because none of the examining and non-examining physicians upon whose
20 opinions the ALJ relied considered "significant medical evidence" that Plaintiff's
21 condition severely degenerated over the relevant period. (Jt. Stip. at 7). Plaintiff argues
22 that this unconsidered evidence "belies the finding that [Plaintiff] can perform medium
23 work." (*Id.*). While Plaintiff acknowledges that the ALJ referred to some of that evidence
24 in her decision, he argues that an ALJ is "simply not qualified to interpret raw medical
25 data in functional terms." (*Id.* at 9) (quoting *Padilla v. Astrue*, 541 F. Supp. 2d 1102,
26 1008 (C.D. Cal. 2008) (internal quotation marks omitted)). For the reasons stated below,
27 the Court agrees that a remand is necessary for the ALJ to obtain expert opinion on
28 whether the unconsidered imaging evidence warrants modification of Plaintiff's RFC.

1 **1. Medical Opinions**

2
3 In determining Plaintiff’s RFC, the ALJ gave “great weight” to the expert opinions
4 of two non-examining physicians, Dr. B. Vaghaiwalla, M.D. and Dr. H. Han, M.D., and
5 one examining physician, Dr. David H. Payne, M.D.

6
7 **a. Dr. B. Vaghaiwalla, M.D. (Exh. 1A)**

8
9 On August 2, 2016, (AR 82), non-examining physician Dr. B. Vaghaiwalla, M.D.
10 conducted a review of Plaintiff’s medical file and completed a Disability Determination
11 Explanation. (AR 73-84). Dr. Vaghaiwalla concluded that Plaintiff’s primary impairment
12 was dysfunction of major joints, which he categorized as “severe.” (AR 79). According
13 to Dr. Vaghaiwalla, Plaintiff’s symptoms could reasonably be expected to produce his
14 symptoms and pain, but the objective evidence was not sufficient to substantiate
15 Plaintiff’s statements about the intensity, persistence and functionally limiting effects of
16 his symptoms. Accordingly, Dr. Vaghaiwalla found Plaintiff’s complaints about the
17 severity of his condition to be only “partially credible.” (AR 79-80).

18
19 Dr. Vaghaiwalla assessed the following RFC: can occasionally lift or carry 50
20 pounds, and frequently lift or carry 25 pounds; can stand or walk for about 6 hours in an
21 8-hour workday, and sit for the same period; and has an unlimited ability to push and/or
22 pull, apart from the aforementioned lift and carry limitations. (AR 80). Dr. Vaghaiwalla
23 also determined that Plaintiff can climb ramps, stairs, ladders, ropes and scaffolds
24 occasionally; balance occasionally; stoop at the waist frequently; kneel occasionally;
25 crouch frequently; and crawl frequently. (AR 81). Dr. Vaghaiwalla based these
26 conclusions on medical records from April and May 2016 showing that: (1) for Plaintiff’s
27 cervical spine, “[c]ervical vertebral bodies are normal in height,” their “alignment is
28 normal,” the “heights of the disc spaces are well preserved,” and no fractures or

1 significant degenerative changes were noted; (2) for his lumbar region, although there was
2 “moderate disk space narrowing at L5-S1 with moderate neural foramina narrowing” and
3 “[m]inimal anterior osteophyte formation at L3 and L5,” the “[v]ertebral bodies are
4 normal in height and alignment,” “[n]o significant degenerative changes [were] noted,”
5 and the remainder of the disc spaces were “within normal limits”; and, finally,
6 (3) Plaintiff’s feet showed no acute fracture, their alignment was normal, no significant
7 joint disease was noted, and no significant soft tissue abnormality could be identified.
8 (AR 81). Dr. Vaghaiwalla further determined that Plaintiff presented with “no significant
9 shoulder finds.” (AR 81). Ultimately, Dr. Vaghaiwalla concluded that Plaintiff was
10 capable of engaging in “medium” maximum sustained work and was “not disabled.” (AR
11 83).

12
13 ***b. Dr. H. Han, M.D. (Exh. 3A)***
14

15 Approximately two months later, on October 10, 2016, (AR 94), Dr. H. Han, M.D.
16 also completed a Disability Determination Explanation. (AR 86-96). Dr. Han observed
17 that since Dr. Vaghaiwalla’s review in August 2016, Plaintiff was diagnosed with an
18 umbilical hernia in September 2016. (AR 87). Like Dr. Vaghaiwalla, Dr. Han found that
19 Plaintiff suffered from a primary “severe” impairment of major joint dysfunction, and that
20 Plaintiff’s statements about the intensity, persistence and functionally limiting effects of
21 his symptoms were only “partially credible.” (AR 91-92). Dr. Han ascribed an RFC
22 identical to Dr. Vaghaiwalla’s, and for the same reasons. (AR 92-94). Also like
23 Dr. Vaghaiwalla, Dr. Han concluded that Plaintiff was capable of performing “medium”
24 work and was not disabled. (AR 95).

1 Based on his physical examination of Plaintiff and his review of Plaintiff's medical
2 history, Dr. Payne determined that Plaintiff can: lift and carry up to 50 pounds
3 occasionally, and up to 20 pound frequently, (AR 1141); sit, stand and walk up to 6 hours
4 in an 8-hour workday and does not require the use of a cane, (AR 1142); handle, finger,
5 feel and push/pull with his right and left hands frequently; reach overhead with his right
6 hand frequently, but with his hand only occasionally, (AR 1143); operate foot controls
7 with his right and left foot frequently, (AR 1143); climb stairs, ramps, ladders and
8 scaffolds frequently (AR 1144); and balance, stoop, kneel, crouch and crawl frequently.
9 (AR 1144). Dr. Payne further found that Plaintiff can tolerate exposure to all of the
10 following frequently: unprotected heights, moving mechanical parts, operating a motor
11 vehicle, humidity and wetness, dust, odors, fumes and pulmonary irritants, extreme cold
12 and heat, and vibrations. (AR 1145). Plaintiff can also tolerate loud (heavy traffic)
13 noises. (AR 1145). Finally, Dr. Payne concluded that Plaintiff can shop; travel without
14 assistance; ambulate without a wheelchair, walker, canes or crutches; walk a block at a
15 reasonable pace on uneven surfaces; use standard public transportation; climb a few steps
16 at a reasonable pace with the use of a single handrail; prepare a meal and feed himself;
17 take care for his personal hygiene; and sort, handle and use paper files. (AR 1146).

18
19 Dr. Payne reported that Plaintiff: is “[w]ell-developed, well-nourished . . . in no
20 apparent distress”; walks at a normal gait and speed without a limp; does not present with
21 scoliosis and has a full “pain-free range of motion” in his neck, thoracolumbar spine,
22 shoulders, wrist and fingers, elbows and forearms, hip, knees, ankles; had negative results
23 in both legs on the straight leg raise test both sitting and supine; and had negative results
24 on the Neer, Hawkins, Jobe, Cross-Body, Lift-Off, O’Brien’s, and Apprehension tests on
25 both his shoulders. (AR 1150-52). Plaintiff’s upper and lower extremities tested 5/5 for

26 ⁸ Proscar is prescribed for men with a benign enlarged prostate. *See Hill v. Bowles*, 2003
27 WL 21448045, at *2 n.3 (N.D. Tex. June 18, 2003).

28 ⁹ Diclofenac cream is “applied to the skin to treat arthritis pain.” *See* <https://medlineplus.gov/druginfo/meds/a611041.html>.

1 strength, 2+ for “deep tendon reflexes,” and 2+ for pulses. Dr. Payne diagnosed Plaintiff
2 with “[m]ultiple body part pain in the shoulders, elbows and heels with minimally positive
3 examination,” plantar fasciitis, cervical spine sprain/strain, and lumbar spine sprain/strain.
4 (AR 1153). Dr. Payne concluded:

5
6 The cervical spine and lumbar spine examinations are negative. The
7 bilateral knee examination is negative except for a mild crepitus in the
8 knees. Neurovascularly intact in the upper and lower extremities. The
9 findings are not that strong. He does have a lot of pain and discomfort
10 along with high blood pressure. He is seen at Kaiser Permanente. He also
11 has gas and hyperlipidemia as well as chronic back pain and epicondylitis.
12 There is no motor or sensory deficit. There is no significant loss of the
13 range of motion.

14
15 (AR 1153).

16
17 ***d. The ALJ’s Reliance on Medical Opinions***

18
19 In determining Plaintiff’s ability to work, the ALJ assigned “great weight” to the
20 2016 conclusions of the DDS medical consultants, Dr. Vaghaiwalla, (AR 80-82), and
21 Dr. Han, (AR 92-94). (*See* AR 31). The ALJ also assigned “great weight” to Dr. Payne’s
22 orthopedic consultative examination dated May 9, 2018, (AR 1140-53). (*See* AR 31).
23 Because Dr. Payne’s RFC assessment was the most recent, and was obtained by a physical
24 examination and review of the records, it is the most probative. *See Stone v. Heckler*, 761
25 F.2d 530, 532 (1985) (“Because Stone’s condition was progressively deteriorating, the
26 most recent medical report is the most probative.”).

1 The ALJ concluded:

2
3 In light of the medical evidence record as a whole, the opinions of the
4 consultative examiner and DDS medical consultants are all reasonable,
5 although they vary slightly.¹⁰ Overall, a finding of a full range of medium
6 is well-supported and reasonable, despite the many normal and mild
7 clinical exam findings. There is little, if any, discussion of CTS [carpal
8 tunnel syndrome] in these opinions so I added handling/fingering
9 limitation, and I reduced overhead reaching to occasionally bilaterally to
10 accommodate his shoulder condition.

11
12 (AR 32).

13 14 **2. Evidence of Plaintiff's Alleged Degenerative Condition**

15
16 Plaintiff specifically puts at issue four “objective tests” that he contends no
17 physician considered, even though they demonstrate “far more significant problems th[a]n
18 identified by the consultative examiner and State agency physicians.” (Jt. Stip. 17). All
19 of these tests were conducted after Dr. Vaghaiwalla and Dr. Han completed their reviews
20 of Plaintiff’s medical records in 2016 and therefore could not have informed their RFC
21 assessments. Although all of the tests were completed before examining physician
22 Dr. Payne prepared his opinion, and were therefore presumably part of the medical files
23 presented to him in the “stack” of Kaiser Permanente records submitted for his review,
24 Dr. Payne did not specifically mention them in his summary of the records that he

25
26 ¹⁰ The primary differences between the RFCs proposed by Drs. Vaghaiwalla and Han, on
27 the one hand, and Dr. Payne, on the other, appear to be that Drs. Vaghaiwalla and Han
28 concluded that Plaintiff could kneel, climb, and balance “occasionally,” (AR 81, 93),
while Dr. Payne found that Plaintiff could engage in those activities “frequently.” (AR
1153). Dr. Payne also determined that Plaintiff could lift overhead with his left shoulder
“occasionally” and his right should “frequently,” which Drs. Vaghaiwalla and Han did not
address. (*Id.*).

1 reviewed. (AR 1148-49). Plaintiff asserts that “the fact that no physician considered the
2 additional evidence . . . in assessing [Plaintiff’s] ability to work renders their opinions
3 incomplete and not substantial evidence.” (Jt. Stip. at 9)

4
5 The tests are:

6
7 A **June 29, 2017** x-ray of the bilateral knees “consistent with end-stage
8 degenerative changes in the valgus knee,¹¹ [with] significant osteophytes¹² present, [and]
9 the lateral joint line narrowed compared to the medial joint line.” (AR 1471). While there
10 was “minimal effusion”¹³ in the left knee, there was no instability in either knee, and the
11 results of Lachman’s¹⁴ and posterior drawer¹⁵ tests on both knees were negative. (AR
12 1471). Nonetheless, Plaintiff was counseled on “the possibility of future total knee
13 replacement.” (AR 1471).¹⁶

14
15 ¹¹ “Valgus deformity (genu valgum) causes the knees to bow inward, giving a knock-
16 kneed appearance and putting extra pressure on the outer (lateral) compartment of the
knee joint.” See [https://www.tsaog.com/connect-learn-interact/blog/2014/06/20/dr-casey-
taber-on-knee-malalignment-varus-vs-valgus-deformity/](https://www.tsaog.com/connect-learn-interact/blog/2014/06/20/dr-casey-taber-on-knee-malalignment-varus-vs-valgus-deformity/).

17 ¹² Osteophytes, commonly known as “bone spurs,” are an enlargement of the normal bony
18 structure. See “Bone Spurs (Osteophytes) and Back Pain,” at [http://www.spine-
health.com/conditions/arthritis/bone-spurs-osteophytes-and-back-pain](http://www.spine-health.com/conditions/arthritis/bone-spurs-osteophytes-and-back-pain).

19 ¹³ “Knee effusion, or water on the knee, occurs when excess fluid accumulates in or
20 around the knee joint. There are many common causes for the swelling, including arthritis
and injury to the ligaments or meniscus (cartilage in the knee).” See
21 <https://www.medicalnewstoday.com/articles/187908>.

22 ¹⁴ “The Lachman test is a passive accessory movement test of the knee performed to
23 identify the integrity of the anterior cruciate ligament (ACL). The test is designed to
assess single and sagittal plane instability.” See https://physio-pedia.com/Lachman_Test.

24 ¹⁵ The “posterior drawer test” of the knees tests “the integrity of the posterior cruciate
ligament (PCL).” See [https://www.physio-pedia.com/Posterior_Drawer_Test_\(Knee\)](https://www.physio-pedia.com/Posterior_Drawer_Test_(Knee)).

25 ¹⁶ On July 5, 2017, Plaintiff met with his physician to further discuss his knee condition,
26 including the results of the June 29, 2017 x-ray. (AR 1488). The physician’s
“independent review of xray’s [sic] show: Right knee films show valgus alignment,
27 moderate degenerative changes with joint space narrowing and oste[o]phyte formation
worse lateral compartment.” (AR 1488). The physician discussed “conservative and
28 surgical” treatment options with Plaintiff, including “use of moist heat, ice, NSAIDs
[nonsteroidal anti-inflammatory drugs], Physical Therapy and injections. We also
discussed that when the time is right and the pain is significant enough that the long term

1 A November 14, 2017 MRI of Plaintiff's spine showing:

2
3 FINDINGS:

4 Mild Disk bulges, spondylosis¹⁷ and facet degeneration identified. L5-S1
5 row based 2 to 3 mm AP central and right paracentral disc protrusion. Mild
6 impingement on the right nerve root and right lateral recess. Mild neural
7 foramen narrowing. L4-5 minimal disc bulge and spondylosis. Mild
8 subarticular recess narrowing. Right neural foramen disc bulge and
9 minimal foramen narrowing. Subtle mild bone marrow edema in the
10 sacrum. Bone scan may be considered if there is any suspicion of stress
11 fracture or neoplastic process. Posterior subcutaneous dependent lumbar
12 edema -- questionable significance. No other soft tissue mass is seen.
13 Other disk space levels are unremarkable if not discussed above. Question
14 left kidney cyst. Tortuous iliac arteries.

15
16 IMPRESSION:

17 Mild Disk bulges, spondylosis and facet degeneration identified. L5-S1
18 row based 2 to 3 mm AP central and right paracentral disc protrusion. Mild
19 impingement on the right nerve root and right lateral recess. Mild neural
20 foramen narrowing. L4-5 minimal disc bulge and spondylosis. Mild

21
22 solution for this problem is a total knee replacement.” (AR 1488). The physician
23 recommended “low impact exercise,” weight loss, and “lower extremity strengthening.”
24 (AR 1488).

24 ¹⁷ “Cervical spondylosis is a general term for age-related wear and tear affecting the spinal
25 disks in your neck. As the disks dehydrate and shrink, signs of osteoarthritis develop,
26 including bony projections along the edges of bones (bone spurs). Cervical spondylosis is
27 very common and worsens with age. More than 85 percent of people older than age 60
28 are affected by cervical spondylosis. Most people experience no symptoms from these
29 problems.” See www.mayoclinic.org. “Lumbar spondylosis is a spine condition that
30 describes the natural deterioration of the lower spine due to age and compression. . . .
31 Most patients over the age of 50 have some form of mild to progressive spondylosis in the
32 lumbar spine. However, most cases of spondylosis do not result in any symptoms.” See
33 www.laserspineinstitute.com.

1 subarticular recess narrowing. Right neural foramen disc bulge and
2 minimal foramen narrowing. Subtle mild bone marrow edema in the
3 sacrum. Bone scan may be considered if there is any suspicion of stress
4 fracture or neoplastic process.

5
6 (AR 1634).¹⁸
7

8 A **November 28, 2017** bone scan revealing:

9
10 FINDINGS:

11 There is mild symmetric uptake at bilateral sacroiliac joints. There is
12 uptake at the acromio clavicular joints, right greater than left. There is also
13 moderate uptake at the right knee. There is mild uptake at bilateral feet and
14 the right first toe. There is otherwise normal distribution of uptake
15 throughout the skeleton. No Physiologic renal and bladder accumulation is
16 seen.
17

18 IMPRESSION:

19 Nonspecific symmetric uptake at bilateral sacral iliac joints, possibly
20 degenerative. Degenerative uptake at the shoulders, right knee, and feet.
21

22 (AR 1698).
23

24 And finally, a **March 15, 2018** MRI of Plaintiff's right shoulder demonstrating:
25

26 _____
27 ¹⁸ The ALJ's review of the medical records included a reference to the November 14,
28 2017 MRI, noting: "A November 14, 2017 image of the lumbar spine shows mild disk
bulges, spondylosis, and fact degeneration, with mild impingement on the L5-S1 right
nerve root and right lateral recess." (AR 34).

1 FINDING:

2 Bone marrow signal intensity is unremarkable without marrow edema or
3 contusion or focal bony lesion. There is increase [sic] proton-density signal
4 within the fibers of the supra and infraspinatus tendon¹⁹ over the region of
5 the footplate suspect for tendinosis/inner fiber tear. Subscapularis tendon is
6 intact. Biceps tendon is in the biceps groove and appear [sic]
7 unremarkable. There is moderate to severe degenerative changes of the
8 acromioclavicular joint. There is hypertrophic changes along the inferior
9 margin of the AC joint indenting the myotendinous junction of the
10 supraspinatus tendon. There is no evidence of labral tear. There is no focal
11 cartilage defect. There is no joint effusion or loose body. There is mild
12 thickening of the inferior glenohumeral ligament. Superior and middle
13 glenohumeral ligaments are intact. There is fluid within the subcoracoid
14 bursa.

15
16 IMPRESSION:

- 17 1. There is increase proton-density signal with the fibers of the supra
18 and infraspinatus tendon over the region of the footplate suspect for
19 tendinosis/inner fiber tear.
- 20 2. There is moderate to severe degenerative changes of the
21 acromioclavicular joint. There is hypertrophic changes along the
22 inferior margin of the AC joint indenting the myotendinous junction
23 of the supraspinatus tendon.
- 24 3. There is fluid within the subcoracoid bursa.
- 25
26

27 ¹⁹ “A supraspinatus tear is a tear or rupture of the tendon of the supraspinatus muscle. The
28 supraspinatus is part of the rotator cuff of the shoulder.” See
https://www.physio-pedia.com/Supraspinatus_tear.

1 (AR 1738-39).²⁰

2
3 **3. Analysis**
4

5 Plaintiff argues that the ALJ’s RFC is not supported by substantial evidence
6 because she gave “great weight” to incomplete opinions that did not reflect consideration
7 of his deteriorating condition. (Jt. Stip. at 7). The Commissioner counters that the ALJ
8 reasonably relied on the physicians’ opinions and in fact discussed in her decision the
9 “objective imaging evidence in 2017 and 2018” that Plaintiff claims shows that his
10 condition deteriorated. (*Id.* at 14). The Commissioner further contends that even if
11 Dr. Payne did not review that evidence, it showed only mild degenerative changes, and no
12 doctor prescribed a “more aggressive form of treatment.” (*Id.* at 15). According to the
13 Commissioner, “[w]ithout more, Plaintiff fails to demonstrate that his condition
14 deteriorated so much that the ALJ was required to include additional restrictions in the
15 RFC or develop the record further.” (*Id.* at 15-16). As such, the Commissioner maintains
16 that the record reviewed by the ALJ was “neither inadequate [n]or incomplete.” (*Id.* at
17 16).

18
19 “Social Security proceedings are inquisitorial rather than adversarial. It is the
20 ALJ’s duty to investigate the facts and develop the arguments both for and against
21 granting benefits[.]” *Sims v. Apfel*, 530 U.S. 103, 110-11 (2000). The ALJ has an
22 affirmative duty to assist the claimant in developing the record “when there is ambiguous
23 evidence or when the record is inadequate to allow for proper evaluation of the evidence.”
24 *Mayes v. Massanari*, 276 F.3d 453, 459-60 (9th Cir. 2001); *see also Brown v. Heckler*,
25 713 F.2d 441, 443 (9th Cir. 1983) (per curiam) (“In Social Security cases the ALJ has a
26 special duty to fully and fairly develop the record and to assure that the claimant's

27
28

²⁰ The ALJ’s decision also refers to the March 15, 2018 MRI, stating: “A March 15, 2018 MRI of the right shoulder reports moderate to severe degenerative changes of the acromioclavicular joint, but no indication of any tears.” (AR 34).

1 interests are considered. This duty exists even when the claimant is represented by
2 counsel.”) (citation omitted). At the same time, “the ALJ is the final arbiter with respect
3 to resolving ambiguities in the medical evidence.” *Tommasetti v. Astrue*, 533 F.3d 1035,
4 1041 (9th Cir. 2008). In reaching a conclusion, the ALJ must consider “conflicting
5 evidence and opinion testimony” in the record. *Magallanes v. Bowen*, 881 F.2d 747, 753
6 (9th Cir. 1989) However, “[i]t is not necessary to agree with everything an expert
7 witness says in order to hold that his testimony contains ‘substantial evidence.’” *Id.*
8 (quoting *Russell v. Bowen*, 856 F.2d 81, 83 (9th Cir. 1988)).

9
10 An expert’s opinion may be of limited value and fail to provide substantial
11 evidence where it fails to take into account key record evidence. In *Hayes v. Astrue*, 270
12 F. App’x 502 (9th Cir. 2008), for example, the Ninth Circuit concluded that the ALJ’s
13 heavy reliance on an examining physician’s opinion was not supported by substantial
14 evidence where the physician’s opinion did not consider readily-available results of the
15 claimant’s nerve conduction study. *Id.* at 504. Similarly, in *Catalano v. Astrue*, 2013 WL
16 12100705 (S.D. Cal. Sept. 10, 2013), the court emphasized the “limited value” of medical
17 opinions rendered by reviewing physicians who did not consider claimant’s complaints of
18 pain. *Id.* at *3.

19
20 Furthermore, where a medical expert fails to opine on potentially critical data, the
21 omission may not as a general matter be rectified by the ALJ’s independent consideration
22 of raw medical data. It is widely acknowledged, as Plaintiff argues, that an ALJ may not
23 substitute his or her lay interpretation of raw medical data in making an RFC assessment
24 in lieu of a qualified expert’s medical opinion. *See, e.g., See Penny v. Sullivan*, 2 F.3d
25 953, 958 (9th Cir. 1993) (“Without a personal medical evaluation it is almost impossible
26 to assess the residual functional capacity of any individual.”); *Banks v. Barnhart*, 434 F.
27 Supp. 2d 800, 805 (C.D. Cal. 2006) (“An ALJ cannot arbitrarily substitute his own
28 judgment for competent medical opinion . . . and . . . must not succumb to the temptation

1 to play doctor and make . . . independent medical findings.”) (quotations omitted); *Tagger*
2 *v. Astrue*, 536 F. Supp. 2d 1170, 1181 (C.D. Cal. 2008) (“[An] ALJ’s determination or
3 finding must be supported by medical evidence, particularly the opinion of a treating or an
4 examining physician.”) (citations and internal quotation marks omitted); *Brawders v.*
5 *Astrue*, 793 F. Supp. 2d 485, 493 (D. Mass. 2011) (“[W]here an ALJ reaches conclusions
6 about [a] claimant’s physical exertional capacity without any assessment of residual
7 functional capacity by a physician, the ALJ’s conclusions are not supported by substantial
8 evidence and it is necessary to remand for the taking of further functional evidence.”)
9 (quoting *Perez v. Sec. of Health and Human Servs.*, 958 F.2d 445, 446 (1st Cir. 1999)).
10 While some courts have found that “where the medical evidence shows relatively little
11 physical impairment, an ALJ permissibly can render a commonsense judgment about
12 functional capacity even without a physician’s assessment,” where “a claimant has
13 sufficiently put her functional inability to perform her prior work in issue . . . ‘an expert’s
14 RFC evaluation is ordinarily essential unless the extent of functional loss, and its effect on
15 job performance, would be apparent even to a lay person.”” *Manso-Pizarro v. Sec. of*
16 *Health and Human Servs.*, 76 F.3d 15, 17 (1st Cir. 1996) (quoting *Santiago v. Sec. of*
17 *Health and Human Servs.*, 944 F.2d 1, 5 (1st Cir. 1991)).

18
19 For example, in *Flores v. Colvin*, 2017 WL 367408 (C.D. Cal. Jan. 24, 2017),
20 objective evidence suggesting that the plaintiff’s degenerative disc disease had worsened
21 emerged after the examining and non-examining physicians issued their assessments and
22 therefore could not have been considered by them. The tests included two CT scans,
23 radiographic imaging, and an MRI. *Id.* at *4. The ALJ adjusted the RFCs assessed by the
24 examining and non-examining physicians to reflect the ALJ’s interpretation of the new
25 evidence. *Id.* at *5. The court concluded that the ALJ’s adjustment of the RFC based on
26 raw medical data that was not considered by any medical expert was an improper
27 substitution of the ALJ’s lay opinion for a medical opinion, and remanded for further
28 consideration of the evidence developed after the prior RFC assessments issued. *Id.* at *6.

1 Here, the x-ray, bone scan and MRIs of Plaintiff's spine, shoulders and feet that
2 Plaintiff contends show his condition deteriorated²¹ were taken in 2017 and 2018, after
3 Dr. Vaghaiwalla and Dr. Han completed their reviews. Although the images were taken
4 before Dr. Payne conducted his examination of Plaintiff, it is not at all clear from
5 Dr. Payne's opinion that he considered them because the *only* objective imaging evidence
6 that he specifically refers to is a 2016 x-ray of Plaintiff's feet. (AR 1148). As such, the
7 Court cannot say with confidence that Dr. Payne's RFC provided the ALJ with substantial
8 evidence of Plaintiff's actual capabilities because it does not appear to have taken into
9 account objective imaging evidence that could potentially confirm or refute Plaintiff's
10 complaints.

11
12 While the ALJ attempted to incorporate some of the imaging evidence into her
13 decision and adjusted Plaintiff's RFC accordingly, the ALJ is not a trained physician and
14 is not qualified to opine on the meaning of raw medical data.²² As Plaintiff argues, the
15 ALJ could have developed expert opinion on the import of the imaging evidence -- or lack
16 thereof -- by ordering an updated consultative examination, *see* 20 C.F.R. § 404.1517, by
17 calling a medical expert to testify at the hearing, 20 C.F.R. §§ 404.1519, 404.1519a, or by
18 remanding the matter back to the "appropriate component" of the agency to make a new
19 determination based on the subsequent medical evidence. 20 C.F.R. § 416.1448(c)(1). It

20
21 ²¹ Plaintiff stated at the August 14, 2018 hearing that he suffers from constant low back
22 pain (AR 57-58); a left knee ACL injury (AR 58); elbow tendinitis with hand numbness
23 (AR 61); and shoulder problems, including surgery in 2010 on his left shoulder and right
24 shoulder pain for which he required treatment. (AR 63-64). Plaintiff stated that his back
25 gets stiff and he has to wait to get out of the car. (AR 60). He can grip things for only
26 four to five minutes before his hands get stuck in a fist, (AR 60-61), and he uses wrist
braces for carpal tunnel syndrome. (AR 63). He claimed that he can carry ten to twenty
pounds, (AR 64-65), but not anything heavy in front of him (AR 62); he has trouble
reaching overhead, (AR 64); can walk for ten to fifteen minutes at a time (AR 58, 65); and
can sit for five to ten minutes at a time. (AR 65). His doctor told him to use a cane, but
he does not want to. (AR 66). His doctor also told him in 2017 that he needs a knee
replacement. (AR 58).

27 ²² The ALJ's RFC differs from Dr. Payne's in that the ALJ concluded that Plaintiff could
28 kneel, crawl, climb, balance, and lift overhead with his right shoulder only occasionally,
(AR 29), whereas Dr. Payne concluded that Plaintiff could perform these tasks frequently.
(AR 1153).

1 may well be that the Commissioner is correct that the imaging evidence does not show
2 deterioration of Plaintiff's condition severe enough to alter the ALJ's RFC. However, in
3 the absence of a medical opinion explaining the meaning of the imaging evidence, the
4 current record is not sufficiently developed for the Court to find that the ALJ's decision
5 was supported by substantial evidence.

6
7 The matter is remanded for further proceedings. On remand, the ALJ shall
8 reevaluate Plaintiff's RFC, taking into account the full range of medical evidence,
9 including the 2017 and 2018 objective imaging evidence, as informed by medical opinion.

10
11 **IV.**
12 **CONCLUSION**

13
14 Accordingly, IT IS ORDERED that Judgment be entered REVERSING the
15 decision of the Commissioner and REMANDING this matter for further proceedings
16 consistent with this decision. IT IS FURTHER ORDERED that the Clerk of the Court
17 serve copies of this Order and the Judgment on counsel for both parties.
