

EXHIBIT 3

SourceForge allowed Internet users to “register” a “project” (including source code, text files, images, etc.) and upload it to a remote server.

The screenshot shows a web browser window displaying the SourceForge website as it appeared in August 2000. The browser's address bar shows the URL <http://web.archive.org/web/20000815053853/http://sourceforge.net/>. The page features a navigation menu on the left with categories like Software, SourceForge, and Sourceforge Foundries. The main content area is titled "Breaking Down The Barriers to Open Source Development." and includes a description of SourceForge as a free service for developers, a "Site Feedback and Participation" section, and a "Set Up Your Own Project" section with a highlighted "Register Your Project" link. A "News" section lists recent releases such as "latd 0.9 released" and "Version 1.0 released w IMDB". On the right side, there are statistics for hosted projects and registered users, a list of top project downloads, newest projects, and most active projects for the week.

"Breaking Down The Barriers to Open Source Development."

SourceForge is a **free service to Open Source developers** offering easy access to the best in CVS, mailing lists, bug tracking, message boards/forums, task management, site hosting, permanent file archival, full backups, and total web-based administration. [more] [FAQ]

Site Feedback and Participation

In order to get the most out of SourceForge, you'll need to **register as a site user**. This will allow you to participate fully in all we have to offer. You may of course browse the site without registering, but will not have access to participate fully.

Set Up Your Own Project

Register as a site user, then Login and finally, [Register Your Project](#).

Thanks... and enjoy the site.

News

latd 0.9 released
patrick - 2000-Aug-14 11:41 - *DECnet for Linux*
This is a bugfix release. Mainly for users having two or more reverse-LAT connections to the same terminal server

Version 1.0 released w IMDB
flurin - 2000-Aug-14 11:39 - *The DVD Database Project*
Enough off all the beta stuff. It works !

SOURCEFORGE: New look & more
dbressler - 2000-Aug-13 15:10 - *SourceForge*
As you've probably noticed, we just went live with a new site design. Please pardon our dust as Largo and the development team polish any rough edges.

Astute visitors will also note that we have an updated Terms of Service and Privacy Policy online. (See page footer for links.)

Screenshot from the Internet Archive, available at <http://web.archive.org/web/20000815053853/http://sourceforge.net/>

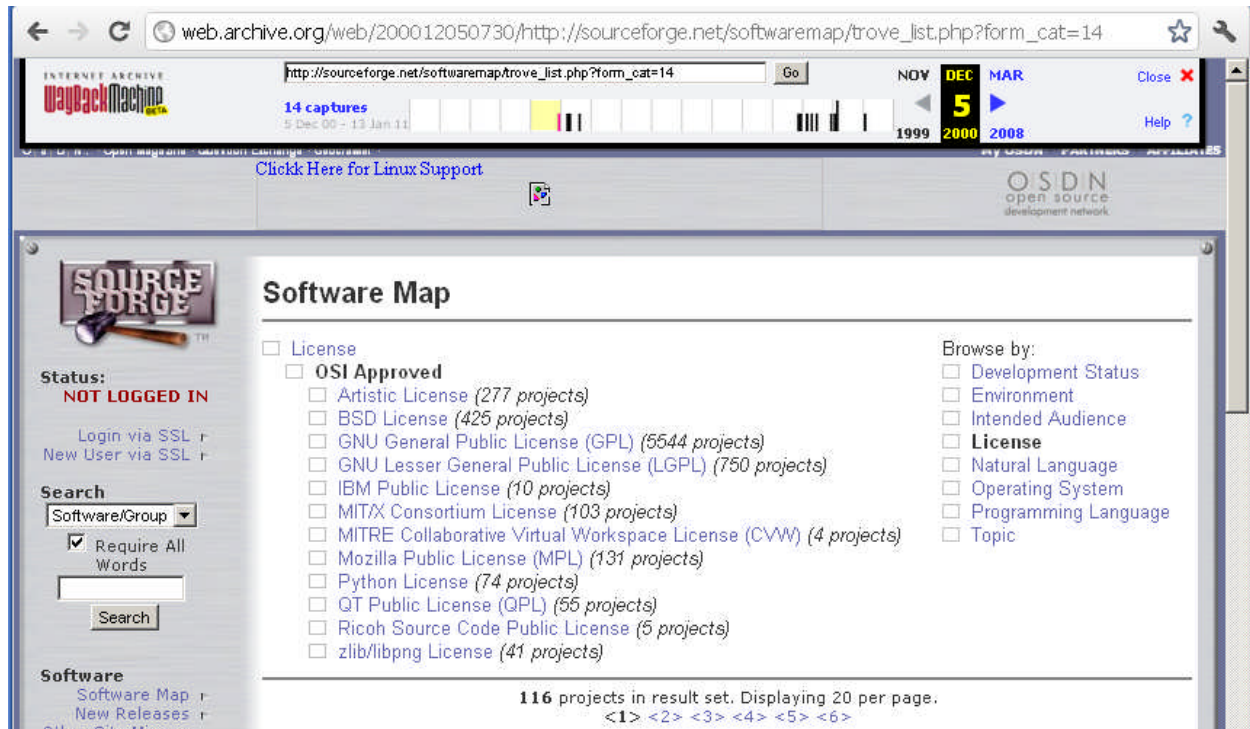

After uploading the project, the user would choose the appropriate subject matter (“Topic”) for his or her work.

The screenshot shows a web browser window displaying the SourceForge Software Map page. The browser's address bar shows the URL: http://web.archive.org/web/20000620165022/http://sourceforge.net/softwaremap/trove_list.php?form_cat=18. The page header includes the SourceForge logo and the tagline "Breaking Down The Barriers to Open Source Development". The user is not logged in, and the page is in English. The main content area is titled "Topic" and lists various software categories with the number of projects in each. The categories and their project counts are: Communications (426 projects), Database (148 projects), Desktop Environment (177 projects), Education (91 projects), Games/Entertainment (422 projects), Internet (557 projects), Multimedia (398 projects), Office/Business (111 projects), Other/Nonlisted Topic (101 projects), Printing (29 projects), Religion (11 projects), Scientific/Engineering (222 projects), Security (75 projects), Software Development (454 projects), System (457 projects), Terminals (23 projects), and Text Editors (74 projects). To the right of the list, there is a "Browse by:" section with a "Topic" radio button selected. Below the list, it says "0 projects in result set." The footer of the page contains a copyright notice: "All trademarks and copyrights on this page are properties of their respective owners. Forum comments are owned by the poster. The rest is copyright ©1999-2000 VA Linux Systems, Inc."

http://web.archive.org/web/20000620165022/http://sourceforge.net/softwaremap/trove_list.php?form_cat=18

Next, the user would choose the appropriate license for his or her project.

Screenshot from the Internet Archive, available at

http://web.archive.org/web/200012050730/http://sourceforge.net/softwaremap/trove_list.php?form_cat=14

After the user finished uploading the project, it would be displayed on a page on the SourceForge website that displayed the License (in this example the GNU General Public License), the Topic (in this example, Internet, Security) and the ability to download the software via a Download button.

The screenshot shows a web browser window displaying the SourceForge project page for Freenet. The browser's address bar shows the URL: <http://web.archive.org/web/20000815064907/http://sourceforge.net/projects/freenet/>. The page features a navigation menu with links for Main, Homepage, Forums, Bugs, Support, Patches, Lists, Tasks, Docs, Surveys, News, CVS, and Files. The main content area is titled "The Freenet Project - Summary" and includes a description: "Development of a Java application designed to allow the free flow of information and ideas on the Internet without fear of censorship of any kind." Below this, a list of project details is provided, with "License: GNU General Public License (GPL)" and "Topic: Internet, Security" highlighted in red. A "Latest File Releases" table shows a single release for the "freenet" package, version 0.2, with a "Download" button also highlighted in red. The page also includes a "Public Areas" section with links to Project Homepage, Public Forums (48 messages in 2 forums), Bug Tracking (9 open bugs, 14 total), Tech Support Manager (1 open requests, 1 total), and DocManager: Project Documentation. A "Latest News" section features two news items: "Freenet 0.1beta Released" and "Freenet approaches first public trial". The left sidebar contains navigation links for Status (NOT LOGGED IN), Software, SourceForge, Project: The Freenet Project, and Sourceforge Foundries.
