1   **MS. WALLACE:** Well, maybe I can address that, Your

2   Honor.

3   I think it may well turn out to be that all we need

4   Oracle to do is for each derivative work identify each prior

5   version on which it's based, identify the modules and the

6   module level, which modules from each prior version were

7   incorporated, and, if necessary, if an entire module was not

8   incorporated, at the feature or function level.

9   I don't think we are going to need to go to,

10   certainly not in all instances, and probably not even in most

11   instances, lines of code. I think where we may get to lines of

12   code is that Oracle has focused a lot of its discovery, so far

13   in the case, on not alleged copying of entire works, but

14   alleged copying of individual objects or fixes or features, and

15   appears to be hinging its damages theory on that.

16   We may, at some point, get to the point where what

17   we're talking about are experts comparing lines of code, but we

18   are certainly not there yet. We are looking for a starting

19   point, the starting point being tell us which preexisting works

20   each version is based on, tell us which modules, which

21   features, which enhancements you included in the derivative

22   work. And then, if we need to get to lines of code, we can

23   address that at that point, but we are certainly not asking for

24   that now.

25   **THE COURT:** Could that be done -- I mean, what's the

CERTIFICATE OF REPORTER

I, Sahar McVickar, Official Court Reporter for the United States Court, Northern District of California, hereby certify that the foregoing proceedings were reported by me, a certified shorthand reporter, and were thereafter transcribed under my direction into typewriting; that the foregoing is a full, complete and true record of said proceedings as bound by me at the time of filing.
