Jeff,

Thank you for your email. The bates numbers you identify below correspond to the ISO files from which Mr. Pinto accessed and analyzed the source code using a standard Personal Computer and text editor. For your reference, the following table identifies the code base pulled from each ISO file. Please note that with regard to PeopleSoft, a significant component of the source code was written in PeopleCode, which resided as objects within the database. For the purpose of Mr. Pinto's analysis, Mr. Pinto was provided with the set of PeopleCode as text files. These text files were produced to Defendants at ORCLX-PIN-000024 to ORCLX-PIN-000062.

ISO File	Code Base
ORCL00485750	JDE EnterpriseOne 8.12 Standalone Base Components - Windows
ORCL00485778	JDE EnterpriseOne 8.12
ORCL00264053	JDE EnterpriseOne 8.12 Update 1 Windows
ORCL00264039	PeopleSoft Student Admin 8.0
ORCL00264023	PeopleSoft EPM 8.8
ORCL00264027	PeopleSoft CRM 8.8
ORCL00264021	PeopleSoft HRMS 8.8
ORCL00264037	PeopleSoft FSCM 8.4
ORCL00264024 and 25	PeopleSoft Peopletools 8.4

Thus, to confirm, Defendants have all of the materials Mr. Pinto relied upon to conduct his analysis. In order to replicate Mr. Pinto's analysis, Defendants can utilize the cited ISO files containing the germane JDE and PeopleSoft source code files (as per the table above), the text files containing the PeopleCode source code (produced as ORCLX-PIN-000024 to ORCL-PIN000062), and the SLOC counting utilities which were specifically developed to count the number of Logical Source Lines of Code for each different code base within each module (produced as ORCLX-PIN-000066 to ORCLX-PIN-000085).

I hope this resolves your question.

Kind Regards,

Amy
