java.io

Class FileReader

```

java.lang.Object
├── java.io.Reader
│   └── java.io.InputStreamReader
│       └── java.io.FileReader

```

All Implemented Interfaces:[Closeable](#), [Readable](#)

```

public class FileReader
extends InputStreamReader

```

Convenience class for reading character files. The constructors of this class assume that the default character encoding and the default byte-buffer size are appropriate. To specify these values yourself, construct an `InputStreamReader` on a `FileInputStream`.

`FileReader` is meant for reading streams of characters. For reading streams of raw bytes, consider using a `FileInputStream`.

Since:

JDK1.1

Constructor Detail

FileReader

```
public FileReader(String fileName)
    throws FileNotFoundException
```

Creates a new `FileReader`, given the name of the file to read from.

Parameters:

`fileName` - the name of the file to read from

Throws:

[FileNotFoundException](#) - if the named file does not exist, is a directory rather than a regular file, or for some other reason cannot be opened for reading.

FileReader

```
public FileReader(File file)
    throws FileNotFoundException
```

Creates a new `FileReader`, given the `File` to read from.

Parameters:

`file` - the `File` to read from

Throws:

[FileNotFoundException](#) - if the file does not exist, is a directory rather than a regular file, or for some other reason cannot be opened for reading.

FileReader

```
public FileReader(FileDescriptor fd)
```

Creates a new `FileReader`, given the `FileDescriptor` to read from.

Parameters:

`fd` - the `FileDescriptor` to read from
