C139 8.8.17 TracFone

So I was in walmart the other day and saw this phone for \$11. I figured I'd pick it up and mess with it. I built a quick serial cable and got it working, but then started reading threads about how these phones can't be unlocked, except with a testpoint and the \$350 infinity box. I have done a lot of work with the iPhone and have good reversing skills. I'll post what I've figured out so far; hopefully people can add to this.

@ 57600 baud, only two at commands appear to work
 at -- echos OK
 at+system=0 -- enter factory mode

The acer tool factory mode commands work, and I can read out the subsidy code, but the firmware is locked to TracFone.

@ 115200 baud, the phone prints "ftmtool" then one second later prints "error" I'm sure this is a flasher interface, but when I google "ftmtool", I get nothing at all.

Does anyone have docs on this phone, or more importantly a flash dump of a 8.8.17 TracFone?

Tracfone W175g Unlock

Just curious what people would pay for exclusive rights to this solution. Tracfone W175g unlocked and debranded. PM me.

blickmaniac,
 Motorola W175g Tracfone works on Gsm 800/1900. Does your T-Mobile network work at that frequencies?
 How did you unlock that Tracfone?
