IN THE UNITED STATES DISTRICT COURT
FOR THE NORTHERN DISTRICT OF CALIFORNIA

KRYSTAL LOPEZ,
Plaintiff,
v.
ZARBEE’S, INC.,
Defendant.

Case No. [22-cv-04465-CRB](#)

**ORDER GRANTING IN PART AND
DENYING IN PART MOTION TO
DISMISS**

Plaintiff Krystal Lopez brings this putative class action against Defendant Zarbee’s, Inc. in connection with Zarbee’s melatonin supplements.¹ Lopez alleges that Zarbee’s products include significantly more melatonin than the label asserts, and therefore violate state consumer protection laws. Zarbee’s moves to dismiss, arguing that all of the claims are completely preempted, and that Lopez lacks standing as to some claims. See MTD (dkt. 26). The Court found this matter suitable for resolution without oral argument, and therefore vacated the motion hearing. See Civil Local R. 7-1(b). Because Zarbee’s arguments largely fail at this stage, the Court grants in part and denies in part the motion.

I. BACKGROUND²

A. The Parties

Zarbee’s, a Delaware corporation, sells melatonin supplements nationwide at retailers like Walmart and Target. FAC (dkt. 24) ¶¶ 3, 8. Lopez lives in California, and purchased a Zarbee’s melatonin product in California. Id. ¶ 6.

¹ This is one of several melatonin suits brought by this law firm. Murphy v. Olly Public Benefit Corp., 22-cv-3760-CRB, is also before this Court.

² These background facts are drawn from the complaint and accepted as true for the purposes of this motion.

B. FDA Regulations for Dietary Supplements

1
2
3
4
5
6
7
8
9
10
11
12
Melatonin is a neurohormone that regulates sleep. Id. ¶ 1. Millions of consumers take over-the-counter melatonin supplements to help them sleep. Id. ¶ 14. Federal law imposes a comprehensive regulatory scheme for dietary supplements, including melatonin supplements. See generally FDCA, 21 U.S.C. § 301 et seq.; 21 C.F.R. Part 100 et seq. Under applicable FDA regulations, melatonin qualifies as an “other dietary ingredient,” meaning that the quantity of melatonin in a supplement must be listed on the product label. 21 C.F.R. § 101.36(b)(3)(i). The declared quantity of melatonin must be established by a specific FDA-mandated test “consisting of 12 subsamples (consumer units), taken 1 from each of 12 different randomly chosen shipping cases, to be representative of a lot.” See 21 C.F.R. § 101.9(g)(2); 21 C.F.R. § 101.36(f)(1) (applying this testing method to “other dietary ingredients”).

13
14
15
16
17
The FDA forbids supplement labels that overstate quantities. FDA regulations require that the quantity of melatonin “be at least equal to the value . . . declared on the label” for the product’s full shelf life. See 21 C.F.R. § 101.9(g)(4)(i). A product that has less melatonin than is listed on the label is “misbranded.” See 62 Fed. Reg. 49826-01 at 49839 (Sept. 23, 1997).

18
19
20
21
22
23
24
25
26
27
28
The FDA treats supplement labels that understate quantities differently. The FDA recognizes that some supplements, like melatonin, degrade over time, “such that a product that contains a certain amount of a supplement when it gets put on the shelves might have less of that supplement at expiration.” FAC ¶ 22. The FDA further recognizes that some manufacturers formulate their supplements with overages to ensure “that the finished product can meet the label declaration for that dietary ingredient throughout the product’s shelf life.” 68 Fed. Reg. 12158, 12203 (Mar. 13, 2003). Accordingly, there is a safe harbor: “[r]easonable excesses over labeled amounts are acceptable within current good manufacturing practice.” 21 C.F.R. § 101.36(f)(1). Current good manufacturing practice requires manufacturers to keep track of “any intentional overage amount of a dietary

1 ingredient.” 21 C.F.R. § 111.210(e).³

2 Although the FDA allows for overages, it does not intend “to allow a manufacturer
3 to add excess dietary ingredients in unspecified amounts that would be in excess of the
4 amount actually needed to meet the label declaration.” 68 Fed. Reg. 12158, 12203; see
5 also 72 Fed. Reg. at 34884 (“the amount of overage should be limited to the amount
6 needed to meet the amounts listed in accordance with final § 111.210(d).”). The FDA has
7 declined to adopt a specific cap on overages. See, e.g., 60 Fed. Reg. 67194-01 at 67207
8 (Dec. 28, 1995) (declining proposed 20% overage cap).

9 **C. This Litigation**

10 In June of 2022, Lopez purchased a bottle of Zarbee’s Children’s Sleep with
11 Melatonin Gummies from a Walmart store in Salinas, California. FAC ¶ 50. The
12 gummies were for her 8-year-old child. Id. Lopez “relied on the fact that Zarbee’s
13 dosages were well-controlled” and “read and relied on the accuracy of the melatonin
14 content on the label.” Id. She chose the 1mg dose per gummy “because she did not want
15 to give her child more melatonin, due to increased concerns about side effects and safety.”
16 Id. She gave him the gummies and noticed that they sometimes “would have a very strong
17 tranquilizing effect that concerned her, and then the next day he would be unusually
18 subdued.” Id.

19 Lopez did a liquid chromatograph-mass spectrometry analysis on three gummies
20 from each of two bottles of gummies, including the bottle she purchased. Id. ¶ 36. The
21 gummy from Lopez’s bottle had more than twice the amount of melatonin than what
22 Zarbee’s stated on the label (2.16mg instead of 1mg). Id. A gummy from a bottle that was
23 one month away from expiring still had 222% of the claimed melatonin content (2.23mg
24 instead of 1mg). Id.

25 Lopez initially brought suit in August of 2022, arguing that the product “was not
26 accurately dosed or labeled.” See Compl. (dkt. 1) ¶ 33. Zarbee’s moved to dismiss the
27

28 ³ Manufacturers need not report those overages on their labels. 62 Fed. Reg. at 49831.

1 original complaint, arguing that the FDA allows for overages and that Lopez’s testing
 2 methodology was inadequate. See First MTD (dkt. 21) at 7–11. Lopez amended. FAC.
 3 The FAC now alleges that “[b]ecause the excess is materially more than reasonably
 4 necessary to ensure that the melatonin meets the amount specified on the product label
 5 throughout the product’s shelf life, Zarbee’s Melatonin is unreasonably overdosed.” Id. ¶
 6 38. It includes claims for violation of: (1) California, Connecticut, Illinois, Maryland,
 7 Missouri, and New York consumer protection acts; (2) California’s Unfair Competition
 8 Law (UCL); (3) California’s False Advertising Law (FAL); (4) California’s Consumers
 9 Legal Remedies Act (CLRA); as well as: (5) breach of express warranty; and (6) unjust
 10 enrichment/quasi-contract. Id. ¶¶ 67–110. Zarbee’s again moves to dismiss. See MTD.

11 II. LEGAL STANDARD

12 Under Rule 12(b)(6) of the Federal Rules of Civil Procedure, the Court may dismiss
 13 a complaint for failure to state a claim upon which relief may be granted. The Court may
 14 base dismissal on either “the lack of a cognizable legal theory or the absence of sufficient
 15 facts alleged under a cognizable legal theory.” Godecke v. Kinetic Concepts, Inc., 937
 16 F.3d 1201, 1208 (9th Cir. 2019) (cleaned up).

17 A complaint must plead “sufficient factual matter, accepted as true, to state a claim
 18 to relief that is plausible on its face.” Ashcroft v. Iqbal, 556 U.S. 662, 678 (2009) (cleaned
 19 up). A claim is plausible “when the plaintiff pleads factual content that allows the court to
 20 draw the reasonable inference that the defendant is liable for the misconduct alleged.” Id.
 21 “Threadbare recitals of the elements of a cause of action, supported by mere conclusory
 22 statements, do not suffice” to survive a 12(b)(6) motion. Id. (citing Bell Atlantic v.
 23 Twombly, 550 U.S. 544, 555 (2007)). When evaluating a motion to dismiss, the Court
 24 “must presume all factual allegations of the complaint to be true and draw all reasonable
 25 inferences in favor of the nonmoving party.” Usher v. City of Los Angeles, 828 F.2d 556,
 26 561 (9th Cir. 1987). “Courts must consider the complaint in its entirety, as well as other
 27 sources courts ordinarily examine when ruling on Rule 12(b)(6) motions to dismiss, in
 28 particular, documents incorporated into the complaint by reference, and matters of which a

1 court may take judicial notice.” Tellabs, Inc. v. Makor Issues & Rights, Ltd., 551 U.S.
2 308, 322 (2007).

3 If a court dismisses a complaint for failure to state a claim, it should “freely give
4 leave” to amend “when justice so requires.” Fed. R. Civ. P. 15(a)(2). A court may deny
5 leave to amend due to “undue delay, bad faith or dilatory motive on the part of the movant,
6 repeated failure to cure deficiencies by amendment previously allowed, undue prejudice to
7 the opposing party by virtue of allowance of the amendment, [and] futility of amendment.”
8 Leadsinger, Inc. v. BMG Music Pub., 512 F.3d 522, 532 (9th Cir. 2008).

9 **III. DISCUSSION**

10 Zarbee’s argues that the FAC should be dismissed with prejudice because (A) all of
11 the claims are completely preempted by the FDA, and (B) Lopez lacks standing.

12 **A. Express Preemption**

13 The FDA expressly preempts state law claims that seek to impose manufacturing
14 and labeling requirements for dietary supplements that are “not identical to” federal
15 requirements of the same type. 21 U.S.C. § 343-1(a)(1); see also 21 C.F.R. § 100.1(c)(4)
16 (“not identical to” means “that the State requirement directly or indirectly imposes
17 obligations . . . concerning the composition or labeling of food” that are “not imposed by
18 or contained in the applicable [federal statute or regulation]” or “[d]iffer from those
19 specifically imposed by or contained in the applicable [federal statute or regulation]”); 21
20 U.S.C. § 321(ff) (dietary supplements are “a food” within the meaning of the FDCA).
21 Zarbee’s argues that the FDA expressly preempts Lopez’s claims because (1) she is
22 complaining about FDA-permitted overages; and (2) the testing method Lopez uses to
23 support her claims deviates from the FDA-mandated testing method. MTD at 8–14.
24 “Preemption is an affirmative defense,” so the burden is on Zarbee’s to prove it. See
25 Cohen v. ConAgra Brands, Inc., 16 F.4th 1283, 1289 (9th Cir. 2021).

26 **1. Overages**

27 Stressing that the FDA allows manufacturers to include overages in nutritional
28 supplements, Zarbee’s contends that Lopez’s claims, all based on overages in Zarbee’s

1 melatonin products, are preempted. MTD at 9–12. Zarbee’s cites to Ochoa v Church &
2 Dwight Co., Inc., No. 5:17-cv-2019-ODW (SP), 2018 WL 4998293 (C.D. Cal. Jan. 30,
3 2018), as an example of courts “dismiss[ing] as preempted state-law claims that a
4 supplement is mislabeled because it includes more than the declared amount of a dietary
5 ingredient.” Id. at 10. But Ochoa does not help Zarbee’s.

6 In Ochoa, the plaintiff alleged based on independent laboratory testing that the
7 defendant understated the amount of folic acid in its prenatal gummies. 2018 WL
8 4998293, at *1. She alleged that the label on defendant’s gummies denotes 800 mcg of
9 folic acid per serving, but that the lab found amounts of 1,100 mcg and 2,047 mcg in the
10 tested gummies, and that the upper tolerable intake limit for folic acid is 1,000 mcg. Id.
11 The court discussed the same authority cited herein about overages, and then turned to the
12 defendant’s argument that the plaintiff “seeks to impose a labeling requirement that is not
13 ‘identical’ to the FDA supplement label regulations.” Id. at *4. The court concluded that
14 the plaintiff’s claims were preempted because “she has not pled that the excess (or
15 overage) is unreasonable and not consistent with good manufacturing practices for insuring
16 that the folate level does not fall below the label amount during the product’s shelf life.”
17 Id. at *5 (emphasis added). Instead, she had alleged that the gummies had “‘a materially
18 significant amount in excess’ that ‘significantly exceeds the tolerable upper limit for folic
19 acid.’” Id. Because the regulations did not include those standards, the plaintiff was
20 “seek[ing] to impose requirements that plainly are not in the regulations.” Id.⁴ However,
21 the court concluded that the plaintiff could amend her complaint to correct this deficiency,
22 and granted her leave to amend. Id.

23 Zarbee’s argues that “likewise, Plaintiff fails to plausibly allege that the amount of
24 excess melatonin present in her Gummies was unreasonable and inconsistent with good
25 manufacturing practices.” MTD at 10. That may have been the problem with the original
26

27 _____
28 ⁴ The court also held that the plaintiff failed to allege that she had used the FDA’s testing
methods. Id. The Court addresses that issue next but notes that Ochoa (filed 1/30/18) pre-
dates Durnford v. MusclePharm Corp., 907 F.3d 595 (9th Cir. 2018) (filed 10/12/18).

1 complaint. But in the FAC, Lopez’s allegation is precisely what was missing in Ochoa.
2 See FAC ¶ 38 (Zarbee’s dosage is “materially more than reasonably necessary to ensure
3 that the melatonin meets the amount specified on the product label throughout the
4 product’s shelf life”).

5 Zarbee’s focuses on the FAC’s reference to a 10–15% overage as reasonable,
6 arguing that Lopez has “invent[ed] an overage threshold from thin air that she unilaterally
7 deems ‘reasonable.’” MTD at 10. But Lopez’s point about the 10–15% overage is that
8 “other U.S. manufacturers” who sell melatonin supplements put their products on the shelf
9 with a 10–15% overage, which is “reasonable because, by the time the shelf life ends, the
10 product has approximately the amount of melatonin that is declared on the label.” FAC ¶
11 25. Lopez does not argue that only a 10–15% overage would be reasonable, but that
12 Zarbee’s overages are so excessive by comparison that they could not possibly be
13 necessary to ensure “that the [melatonin] level does not fall below the label amount during
14 the product’s shelf life.” See Ochoa, 2018 WL 4998293, at *5. This might or might not be
15 true: discovery can show how long it takes melatonin to degrade during a given product’s
16 shelf life. In the meantime, Lopez has pointed to the correct standard. She has not alleged
17 that Zarbee’s did something wrong by doing something “specifically approved by the
18 FDA.” See Carter v. Novartis Consumer Health, Inc., 582 F. Supp. 2d 1271, 1285 (C.D.
19 Cal. 2008). She has not alleged that there is too much of something based on the “upper
20 tolerable intake limit” or some other metric. Instead, she alleges that there is more than
21 what is required to “meet the label declaration for that dietary ingredient throughout the
22 product’s shelf life.” See 68 Fed. Reg. 12158, 12203; see also 68 Fed. Reg. 12158, 12203
23 (not intended to allow “excess dietary ingredients in unspecified amounts that would be in
24 excess of the amount actually needed to meet the label declaration.”).⁵

25
26 ⁵ Zarbee’s also argues that Lopez’s arguments in support of this standard are “speculative
27 and conclusory”—that based on her inadequate testing methods, she suspects that the
28 gummies would have an unreasonable amount of melatonin in them after they expire. See
MTD at 10–11. This argument, which overlaps somewhat with the next section, is not
persuasive. The FAC describes laboratory testing that supports its claim of an
unreasonable overage. See FAC ¶¶ 34–39.

1 Because Lopez’s claims would not impose requirements on manufacturers that are
 2 different from what the FDA requires, they are not preempted. See Chavez v. Church &
 3 Dwight Co., Inc., No. 17 C 1948, 2018 WL 2238191, at *5, 6 (N.D. Ill. May 16, 2018) (no
 4 preemption where plaintiff alleged that “Church added more folic acid to Vitafusion than
 5 was necessary to ensure that the level of folic acid meets the labeled amount over the
 6 course of the supplement’s shelf life” because that “plausibly alleges that Vitafusion is
 7 misbranded within the confines of the FDCA”).

8 2. Testing Method

9 Zarbee’s next argues that Lopez’s claims are preempted because the FDA requires a
 10 specific testing method, and the FAC admits that Lopez did not follow it. See MTD at 12–
 11 14; see also FAC ¶¶ 34–38 (describing a testing method that is indisputably not the FDA
 12 method). Zarbee’s continues: “[f]orcing manufacturers to ensure that they meet not only
 13 FDA’s rigorous testing requirements, but also Plaintiff’s bespoke approach, would impose
 14 obligations on manufacturers that differ from those imposed by federal law.” Id. at 12.
 15 Zarbee’s position—that a complaint must allege compliance with the FDA testing
 16 method—was the law at one point. See, e.g., Mee v. I A Nutrition, Inc., No. C-14-5006
 17 MMC, 2015 WL 2251303, at *4 (N.D. Cal. May 13, 2015) (“As each district court to have
 18 considered the matter has found, where, as here, an FDA regulation provides that the
 19 question of compliance must be determined using the method specified therein, a state law
 20 claim that seeks to establish a violation of such regulation by a different methodology is
 21 preempted.”).

22 But Durnford v. MusclePharm Corp., 907 F.3d 595 (2018), might represent a
 23 change in the law. In Durnford, the plaintiff brought a misbranding claim about the
 24 composition of protein in a particular supplement. 907 F.3d at 603. Although the issue of
 25 “whether or not there was compliance with the FDA’s 12-sample testing protocol [did] not
 26 matter” in that case, the court took the opportunity to comment:

27 We need not address whether plaintiffs are ever required to
 28 allege, at the pleading stage, that there are tests contradicting
 the nutrition panel that comply with the FDA’s testing

1 protocols. We note, however, that plaintiffs are generally not
 2 expected to provide evidence in support of their claims at the
 3 pleading stage . . . nor are they required to plead the
 4 ‘probability’ of their entitlement to relief[.] In addition, FDCA
 5 preemption, like all federal preemption, is an affirmative
 6 defense. . . . ‘Only when the plaintiff pleads itself out of
 7 court—that is, admits all the ingredients of an impenetrable
 8 defense—may a complaint that otherwise states a claim be
 9 dismissed under Rule 12(b)(6).’

10 Id. at 603 n.8.

11 Some district court cases have taken note of this dicta from Durnford and departed
 12 from the long-held practice noted in Mee. Thus, in Amavizca v. Nutra Manufacturing,
 13 LLC, No. 08-cv-1324-RGK-MAA, 2020 WL 8837145, at *5 (C.D. Cal. Oct. 20, 2020), the
 14 court held that, where the plaintiff had not alleged that he followed the FDA 12-sample
 15 testing method but instead tested three bottles, none of which contained glucosamine
 16 sulfate, such allegations were “sufficient to survive Defendants’ assertion of federal
 17 preemption.” The court noted that to require the plaintiff “to specifically allege testing in
 18 conformance with [the FDA method] would be tantamount to requiring [p]laintiff ‘to
 19 provide evidence in support of [his] claims at the pleading stage.’” Id. (citing Durnford,
 20 907 F.3d at 603 n.8 and Diamos v. Walmart Inc., No. 2:19-cv-5526-SVW (GJS), 2020 WL
 21 1942322, at *3 (C.D. Cal. Jan. 9, 2020) (holding, where plaintiff alleged a complete
 22 absence of an advertised supplement, supported by allegations of independent testing, that
 23 plaintiff stated a claim for relief that was not preempted)); see also Carrol v. S.C. Johnsons
 24 & Son, Inc., No. 17-cv-5828, 2018 WL 1695421, at *3 (N.D. Ill. March 29, 2018) (“Courts
 25 in this district have held that plaintiffs can sufficiently allege mislabeling claims based on
 26 preliminary testing that was not completed in compliance with FDA standards.”).

27 Lozano v. Bowmar Nutrition LLC, No. 2:21-cv-4296-MCS-KS, 2021 WL 4459660
 28 (C.D. Cal. Aug. 19, 2021) is somewhat different and represents a line of cases the Court
 must acknowledge. In Lozano, the court cited Durnford in holding that “[f]ederal pleading
 standards do not require Plaintiff to affirmatively allege that her laboratory testing
 comports with the FDA sampling regulation.” 2021 WL 4459660, at *6 (citing Durnford,
 907 F.3d at 603 n.8). The court noted that preemption would not be an issue if the plaintiff

1 had “stood solely on allegations that the products contain less protein than Defendant
2 represented.” Id. However, Lozano also stated that “the reports [that the plaintiff relied
3 upon] do not admit noncompliance with FDA sampling methodology” and so it was not as
4 if the plaintiff had pleaded itself out of court. Id.; see also Rubio v. Orgain, Inc., No.
5 EDCV 18-2237-MWF (SHKx), 2019 WL 1578379, at *3–4 (C.D. Cal. March 5, 2019)
6 (finding claim preempted where plaintiff attached testing that was not FDA-compliant);
7 Forouzes v. CVS Pharmacy, Inc., No. 2:18-cv-4090-ODW (AFMx), 2019 WL 652887, at
8 *5 (C.D. Cal. Feb. 15, 2019) (holding that “requiring at least some facts to support a
9 plausible inference of FDA-compliant testing is proper” and stating that “[e]ven courts that
10 do not require factual support for FDA-compliant testing agree that a claim seeking to use
11 a methodology other than that required by the FDA would be preempted.”).

12 Here, unlike in Lozano, the FAC does make clear that Lopez did not test 12 samples
13 according to the FDA’s method. See FAC ¶¶ 34–48 (Lopez tested three samples, and three
14 gummies from each sample). However, this Court does not agree with the authority that
15 would therefore conclude that Lopez had pleaded herself out of court. Pleading that one
16 has conducted independent, non-FDA compliant testing that suggests an unreasonable
17 overage does not suggest that one could not support allegations of unreasonable overage
18 with FDA-compliant testing. It is a reasonable inference at this stage that “[i]f less-
19 exhaustive test results indicate that a supplement is overdosed, it is plausible . . . that the
20 supplement is in fact overdosed.” Opp’n (dkt. 31) at 8; see also Warren v. Whole Foods
21 Market California, Inc., No. 21-cv-4577-EMC, 2022 WL 2644103, at *6 (N.D. Cal. July 8,
22 2022) (“The alleged inadequacies in methodology or interpretation of scientific testing do
23 not warrant dismissal under Rule 12(b)(6) so long as the court can still reasonably infer
24 from the testing result and other alleged facts, taken as true, that the defendant is liable for
25 the misconduct alleged.”). Requiring plaintiffs to allege that they complied with the FDA
26 testing method would be requiring them to “provide evidence in support of [their] claims at
27 the pleading stage.” See Durnford, 907 F.3d at 603 n.8. That is not required in notice
28 pleading, see Iqbal, 556 U.S. at 678 (requiring sufficient factual matter, accepted as true, to

1 ‘state a claim to relief that is plausible on its face,’”), and might be difficult to do, see Muir
2 v. NBTY, Inc., No. 15 C 9835, 2016 WL 5234596, at *5 (N.D. Ill. Sept. 22, 2016) (“the
3 court is uncertain how a plaintiff, prior to discovery, would have access to ‘randomly
4 chosen shipping cases’ from which he could have selected 12 consumer samples that he
5 could be sure had come ‘from a single lot.’”); see also Opp’n at 9–10 (arguing that facts
6 about overages are peculiarly within Zarbee’s knowledge); FAC ¶ 39 (FDA requires
7 Zarbee’s to retain internal testing re overages so “it is reasonable to infer that Zarbee’s
8 own testing (using FDA protocols) will confirm that the products are substantially (and
9 unreasonably) overdosed.”).

10 Like the plaintiff in Amavizca who tested just three samples, 2020 WL 8837145, at
11 *5, Lopez has alleged enough to plausibly claim that Zarbee’s violates the FDA standard
12 for overages. Put another way, Zarbee’s has not met its burden to establish that Lopez
13 pleaded herself out of court by pleading facts that establish Zarbee’s compliance with FDA
14 regulations.

15 Lopez will eventually have to prove that Zarbee’s failed to comply with the FDA
16 overage regulations. See Chavez, 2018 WL 2238191, at *5 (“To be sure, it remains to be
17 seen whether the predicate for Chavez’s argument bears up under scrutiny. But his claim
18 that including harmful levels of folic acid falls outside the bounds of reasonableness . . . is
19 by no means implausible.”); Clay v. Cytosport, Inc., No. 15-cv-165 L(DHB), 2015 WL
20 5007884, at *4 (S.D. Cal. Aug. 19, 2015) (“Of course, in order to ultimately prevail on
21 these claims, Plaintiffs will have to prove that Defendant did not comply with the FDCA
22 provisions listed above. However, to state a claim, Plaintiffs only need to allege a
23 plausible violation of the FDCA.”). In addition, Zarbee’s may re-raise the issue of
24 preemption at a later point if appropriate. See Lozano, 2021 WL 4459660, at *7 (“the
25 Court declines to dismiss the claims on this motion because the SAC does not squarely
26 present a preemption problem, but Defendant may renew its preemption challenge if
27 Plaintiff’s claims prove inconsistent with the FDCA.”).

28 The Court does not dismiss the FAC based on express preemption.

B. Standing

Zarbee’s argues that Lopez lacks standing to bring claims based on (1) products she did not purchase, (2) the Zarbee’s website, which she did not visit, and (3) other states’ laws. MTD at 14–17.

1. Unpurchased Products

A plaintiff may bring claims for products she did not purchase, so long as her injury from a product is “‘substantially similar’ to the injuries suffered by [the other] class members.” McKinney v. Corsair Gaming, Inc., No. 22-CV-00312-CRB, 2022 WL 2820097, at *13 (N.D. Cal. July 19, 2022) (quoting Garnica v. HomeTeam Pest Def., Inc., 14-cv-5243, 2015 WL 13066140, at *1–2 (N.D. Cal. Dec. 21, 2015)). Products are “‘substantially similar” if “‘the resolution of the asserted claims will be identical between the purchased and unpurchased products.” Ang v. Bimbo Bakeries USA, Inc., No. 13-cv-01196-WHO, 2014 WL 1024182, at *8 (N.D. Cal. Mar. 13, 2014). Thus, in the labelling context, if each label is “‘false in the same way,” then the “‘unpurchased products . . . do ‘not implicate a significantly different set of concerns than’ those purchased by the named plaintiffs” and thus, “[b]y establishing that any of the labels were misleading, the [p]laintiffs would necessarily establish that they all were.” McKinney, 2022 WL 2820097, at *13 (quoting Garrison v. Whole Foods Market Group, Inc., No. 13-cv-5222-VC, 2014 WL 2451290, at *4 (N.D. Cal. June 2, 2014)).

Lopez alleges that she bought and tested only one Zarbee’s product—the children’s gummies—but she brings claims concerning other Zarbee’s melatonin products that she neither bought nor tested, including an oral suspension and tablets. See FAC ¶ 29 & Ex. 1. Lopez alleges that Zarbee’s dosing claims “‘are substantially similar for all accused Zarbee’s Melatonin products.” Id. ¶ 31. She alleges that the samples of the Zarbee’s children’s gummies that she tested were overdosed, and so “‘it is reasonable to infer that Zarbee’s own testing (using FDA protocols) will confirm that [all] the products are substantially (and unreasonably) overdosed.” Id. ¶ 39; see also id. ¶ 40 (“the dosing is unreasonably excessive. . . . For all accused Zarbee’s Melatonin, the label is false in the

1 same way.”).

2 Lopez has not plausibly alleged that the non-purchased, non-tested Zarbee’s
3 melatonin products are overdosed. Her allegations on that point are speculative and
4 conclusory. See Iqbal, 556 U.S. at 678 (conclusory statements insufficient); see also
5 Forouzes, 2019 WL 652887, at *5 (dismissing complaint where plaintiff’s “vague
6 allegations broadly encompass the entire CVS Sport 100+ product line without identifying
7 any factual similarities across those products beyond the SPF value.”); Opp’n at 11 (“To
8 be sure, there are differences among the products”). It is not a reasonable inference that
9 the gummies, tablets, and liquid products at issue all “come from the same, systematic
10 manufacturing practice, with similar overages.” See id. at 12.

11 That products all contain the same key ingredient can sometimes satisfy the
12 pleading standard. See, e.g., Lanovaz v. Twinings N. Am., Inc., No. C-12-2646-RMW,
13 2013 WL 2285221, at *3 (N.D. Cal. May 23, 2013) (where plaintiff claimed that plant
14 ingredient was not a “natural source of antioxidants” and 51 products were made from that
15 same plant ingredient, there was a substantial similarity between the products). But here,
16 the issue is not the presence of a particular ingredient, it is the quantity of that ingredient.
17 See Ang, 2014 WL 1024182, at *8 (“where the actual composition or appearance of the
18 product is legally significant to the claim at issue, the consumer may only be allowed to
19 pursue claims for products with identical product composition and/or appearance.”).
20 Showing that melatonin was overdosed in the children’s gummies does not “necessarily
21 establish” that it was overdosed in the other challenged products. See McKinney, 2022
22 WL 2820097, at *13 (quoting Garrison, 2014 WL 2451290, at *4).

23 Accordingly, Lopez has not adequately alleged that melatonin products are
24 “substantially similar” such that “the resolution of the asserted claims will be identical
25 between the purchased and unpurchased products.” See Ang, 2014 WL 1024182, at *8.
26 Her claims based on unpurchased products are dismissed, with leave to amend.

27 2. Website

28 Claims based on websites that plaintiffs fail to allege having actually “viewed and

1 relied on” are subject to dismissal. See Rugg v. Johnson & Johnson, No. 17-cv-5010-BLF,
2 2018 WL 3023493, at *7 (N.D. Cal. June 18, 2018). According to the FAC, the Zarbee’s
3 website claims that “Each gummy contains 1 mg melatonin, which is safe” and can “help
4 your little one.” FAC ¶ 42. The FAC argues that this representation demonstrates that
5 Zarbee’s “admits that accurate dosing and labelling is material to reasonable consumers.”
6 Id. The FAC specifically explains: “The point is not that all [consumers] read the
7 website—the point is that Zarbee’s itself admits that accurate dosing and labelling is
8 material to reasonable consumers.” Id.

9 Zarbee’s nonetheless moves to dismiss any claims based on its website, as Lopez
10 “does not allege that she read, let alone relied on, any of these website statements when
11 deciding to purchase her Gummies.” MTD at 16. Lopez responds that she is not claiming
12 to have relied on any website statements, and cites the website only as proof “that accurate
13 dosing and labelling matters to consumers.” Opp’n at 12. Zarbee’s insists that “the
14 allegations in her pleading concerning Zarbee’s website should be disregarded, and
15 Plaintiff should be prohibited from seeking discovery or basing any claim or argument on
16 any website content.” Reply (dkt. 32) at 11.

17 No misrepresentations on Zarbee’s website form the basis for any of Lopez’s
18 claims, and so there is nothing for the Court to dismiss.

19 3. Other States’ Laws

20 Finally, there is the question of whether Lopez can bring claims under other states’
21 laws. In Count 1, she “brings individual and subclass claims based on California law,” and
22 “[f]or the Multi-State Consumer Protection Subclass,⁶” she brings claims for violations of
23 “state consumer protection laws that are materially-similar to the laws of California,”
24 including California, Connecticut, Illinois, Maryland, Missouri, and New York. FAC ¶ 68.
25 Zarbee’s moves to dismiss the other-state part of Count 1, arguing that Lopez resides in
26 California and purchased the gummies in California, and therefore lacks standing to assert
27

28 ⁶ Lopez defines this as “All persons who purchased Zarbee’s Melatonin in the identified
states (see Count 1) during the applicable statute of limitations.” FAC ¶ 58.

1 claims under any state but California. MTD at 16. Zarbee’s quotes Jones v. Micron
2 Technology, Inc., 400 F. Supp. 3d 897, 908 (N.D. Cal. 2019), for the proposition that
3 “[c]ourts in the Ninth Circuit have consistently held that a plaintiff in a putative class
4 action lacks standing to assert claims under the laws of states other than those where the
5 plaintiff resides or was injured.” MTD at 16. Lopez responds that Zarbee’s has failed to
6 show that the California law is materially different from other states’ laws on the facts of
7 the case, and that this Court should defer the issue until class certification. See Opp’n at
8 13 (citing McKinney, 2022 WL 2820097).

9 There have been a flurry of recent cases on this issue, generally either concluding
10 that this is a standing issue or that it is a Rule 23 issue. Judge Chen summarized some of
11 the recent history in Sultanis v. Champion Petfoods USA Inc., No. 21-cv-162-EMC, 2021
12 WL 3373934, at *5 (N.D. Cal. Aug. 3, 2021), noting that “[c]ourts in the Ninth Circuit
13 have been split on whether a named plaintiff in a putative class action has standing to
14 assert claims under the laws of states where the named plaintiff does not reside or was
15 injured.” He cited Jones as representing what “most courts have held,” then discussed
16 approvingly Judge Chhabria’s holding in Patterson v. RW Direct, Inc., No. 18-cv-55-VC,
17 2018 WL 6106379, at *1 (N.D. Cal. Nov. 21, 2018), that “whether a named plaintiff can
18 represent class members whose claims arise under the laws of different states does not
19 appear to be a question of standing [because] Patterson does not himself seek to raise a
20 claim under the laws of a different state; rather, he seeks to represent a class member who
21 can raise such a claim.” Sultanis, 2021 WL 3373934, at *5. Judge Chen concluded “in
22 line with Judge[] Chhabria . . . that whether a plaintiff can bring claims on behalf of
23 unnamed plaintiffs under the laws of states in which the named plaintiff does not reside or
24 was injured is a matter of typicality, adequacy, and predominance under Rule 23, not
25 Article III standing.” Id. at *6. Judge Chen nevertheless concluded that he had the
26 discretion to decide at the pleadings stage that the plaintiff did not satisfy Rule 23, and did
27 so in that case largely as a matter of case management because there were so many out-of-
28 state putative class members. Id. at *7. Judge Chen’s reasoning is persuasive.

1 In McKinney, the plaintiff had alleged that the defendant’s packaging and
 2 advertisements contained deceptive and misleading statements in violation of the common
 3 law and consumer protection laws of California and 43 other states. 2022 WL 2820097, at
 4 *1. This Court agreed that district courts have discretion to address this issue in either a
 5 motion to dismiss or a motion for class certification. Id. at *11–12.⁷ And this Court
 6 concluded that the defendant had not “provided a sufficient description of other state laws
 7 to meet its burden of showing that Plaintiffs lack standing to bring claims under those
 8 other states’ laws,” noting that defendants “presented essentially one page of argument in
 9 its motion” with no detail. Id. at *13. More recently in McKinney, see Order on MTD
 10 (dkt. 53) in Case No. 3:22-cv-312-CRB at 12, the Court concluded that the defendant,
 11 having made a new showing, had “met its burden to show that the states’ consumer
 12 protection regimes are different.”

13 Here, Zarbee’s has not even tried to make a showing about other states’ laws. And
 14 because the FAC only asserts state claims for five additional states (none as populous as
 15 California), there is not the same case management concern Judge Chen encountered in
 16 Sultanis. The Court therefore denies Zarbee’s motion to dismiss on this basis, but will
 17 allow Zarbee’s to re-raise this issue at a later date, likely framed as whether, per Rule 23,
 18 Lopez can represent class members with claims based on other states’ laws.

19 **IV. CONCLUSION**

20 For the foregoing reasons, the Court GRANTS the motion to dismiss only as to the
 21 unpurchased products, and DENIES it in all other respects. Lopez may amend her
 22 complaint as to the unpurchased products, if she wishes to do so, within thirty days of this

23 //

24 //

25
 26 ⁷ Zarbee’s tries to distinguish McKinney, saying that “McKinney addressed whether a
 27 nationwide class could be maintained under California’s consumer protection laws.”
 28 Reply at 10. But McKinney addressed other states’ laws in the context of the defendant’s
 argument that “Plaintiffs cannot represent a class of out-of-state consumers bringing
 claims under other states’ laws because those other laws do not apply to Plaintiffs.” 2022
 WL 2820097, at *11.

1 order.

2 **IT IS SO ORDERED.**

3 Dated: January 17, 2023
