# Microsoft's Infringing Goods and Services

In 2001, Microsoft introduced a technology that it calls Background Intelligent Transfer Service (BITS). BITS transfers files in the foreground or background, throttles the transfers to preserve the responsiveness of other network applications, and automatically resumes file transfers after network disconnects and machine restarts. In 2007, Microsoft began the commercial distribution of version 3.0 of BITS, that adds the capability of transfering files in a peer to peer networking fashion. Microsoft manufactures, uses and sells products that infringe the three Transparent Update Patents. With the introduction of BITS Ver. 3.0, Microsoft has also infringed BackWeb's '289 Patent.

Microsoft has committed these acts with knowledge that the goods and services it provides are specially made for use in a manner that directly infringes the Transparent Update Patents. This conduct constitutes infringement under 35 U.S.C. § 271(c).

Microsoft has committed these acts with knowledge that the goods and services it provides are specially made for use in a manner that directly infringes the '289 Patent. This conduct constitutes infringement under 35 U.S.C. § 271(c).
