## Forwarding or Masking Your Domain Name

Date submitted: 5-18-2011

Domain name forwarding lets you automatically direct your domain name's visitors to a different website.

Masking prevents visitors from seeing your domain name forwarding by keeping your domain name in the Web browser's address bar.

Let's look at this example of how you can configure forwarding.

Forwarding coolexample.COM tocoolexample.NET			
Forwarding Option	Visitor Goes To	Site Visitor Sees	Address Bar Displays
Forwarding Disabled	coolexample .COM	coolexample .COM	coolexample .COM
Forwarding w/o Masking	coolexample .COM	coolexample .NET	coolexample .NET
Forwarding w/ Masking	coolexample .COM	coolexample .NET	coolexample .COM

To forward or mask your domain name, you must use our nameservers. For more information, see [Setting Nameservers for Your Domain Names](#).

For your domain name to forward, its A record must be 64.202.189.170. For more information, see [Updating Your Domain Name's IP Address for Forwarding](#).

### To Forward or Mask Your Domain Name

1. Log in to your [Account Manager](#).
2. In the My Products section, click [Domain Manager](#).
3. Select the domain name you want to forward.

**NOTE:** You cannot forward or mask .tk domain names.

4. Click [Forward](#), and then select [Forward Domain](#).
5. Select [http://](#) or [https://](#) depending on your server settings. For more information, see [HTTP vs. HTTPS](#).
6. In the [Forward to](#) field, enter the URL you want to forward your domain name to.
7. To automatically update your nameservers to accommodate your forwarding changes, select [Update my DNS setting to support this change](#).

### How Do I Get Started?

Our online product advisor will recommend ideal products and solutions for you.

**NOTE:** Activating this setting updates your domain name's nameservers and IP address. If you are currently hosting a website for a domain name and you forward it, visitors can no longer access your website. Instead, forwarding redirects your website's visitors to the URL you enter.

8. To view additional options, including masking, click **Advanced Options**.
9. Select one of the following:
  - **Forward Only** — Specifies the length of time for this forwarding setting. Select one of the following Redirect types:
    - **I am permanently forwarding my domain** — Redirects to the site you specified in the Forward To field using a "301 Moved Permanently" HTTP response. The HTTP 301 response code tells user-agents (including search engines) that the location has permanently moved.
    - **I am only temporarily forwarding my domain** — Redirects to the site you specified in the Forward To field using a "302 Found" HTTP response. The HTTP 302 response code tells user-agents (including search engines) that the location has temporarily moved.
  - **Forward with Masking** — Prevents the forwarded domain name URL from displaying in the browser's address bar, and lets you enter Meta Tags for search engine crawlers in the following fields:
    - **Title** — Displays at the top of the browser window and in search results.
    - **Description** — A short description of your website to display in search engine results.
    - **Keyword** — A list of comma-separated keywords that describes the content and purpose of your website.
10. Click **OK**.

**NOTE:** Forwarded domain names can take up to 24-48 hours to activate.

When posting about a technical issue, please be sure to include as many details as possible, such as your domain name, related URLs and other pertinent information. This consideration will allow us to better understand the situation and quickly assist you.
