1	MR. AMIRI: Amir Amiri on behalf of App		1	today is under oath subject to penalty of perjury?
2	MS. SWEENEY: Bonny Sweeney on behalf o	or the	2	A. I do.
3	plaintiffs.	-16 -6	3	Q. Okay. Is there any reason that you cannot
4	MS. CARINGAL: Jennifer Caringal on beh	all or	4	testify completely and truthfully today?
5	the plaintiffs.		5	A. No.
6	THE VIDEOGRAPHER: The court reporter m	ay now	6	Q. Any substance that you've taken that would
7	swear in the deponent.		7	impair your ability to testify completely and
8			8	truthfully?
9	JEFFREY M. WOOLDRIDGE,		9	A. No.
10	having been sworn, testified as follows:		10	Q. When were you first contacted to do work on
11			11	this case?
12	THE VIDEOGRAPHER: You may proceed, Cou	nsel.	12	A. December 5th I received an e-mail from Bonny
13	MR. KIERNAN: Okay.		13	Sweeney.
14			14	Q. December 5th, 2014 or 2013?
15	EXAMINATION		15	A. December 5th, 2013, yes.
16	BY MR. KIERNAN:		16	Q. Okay. And what is your assignment in this
17	Q. Good morning, Dr. Wooldridge.		17	case?
18	A. Good morning.		18	A. My assignment is to evaluate different claims
19	Q. Could you state your full name for the	record.	19	about how the proper standard error should be computed
20	A. Jeffrey M. Wooldridge.		20	in the Noll regression analysis
21	Q. Okay. Have you ever been deposed befor	re?	21	Q. Okay.
22	A. No.		22	A and whether cluttering is important or not
23	Q. Okay. Have you ever testified before?		23	or I should say whether it's valid or not.
24	A. No.		24	Q. And when did you start work in this matter?
25	Q. Okay. Do you understand that your test	imony	25	When did you start to do the work after being first

	Page 9		Page 10
1	contacted on December 5th?	1	A. No.
2	A. A week later, December 12th, 2013.	2	Q. Okay. It was just you?
3	Q. And about how many hours have you put in on	3	A. Just me.
4	this case?	4	Q. All right. And how are you being compensated
5	A. Up to writing the dec submitting the	5	for your work in this matter?
6	declaration or after that as well?	6	A. Hourly wage?
7	Q. That's a good time. Up through submitting	7	Q. Uh-huh.
8	your declaration.	8	A. \$500 an hour.
9	A. Five to six hours.	9	Q. And how much have you been paid?
10	Q. Okay. And then, after submitting your	10	A. Nothing.
11	declaration, how much time have you spent, if any?	11	Q. Okay. And so when you submit an invoice it's
12	A. Probably another ten hours.	12	going to be between 15 and 16 hours plus whatever work
13	Q. Putting aside conversations that you've had	13	your deposition today time?
14	with counsel	14	A. Yes.
15	A. Yes.	15	Q. Have you submitted any invoices or any other
16	Q including Bonny or anyone else from Robbins	16	bill that reflects the hours spent and the amount you
17	Geller, have you discussed this case with anybody else?	17	are owed?
18	A. No.	18	A. I haven't submitted invoices yet.
19	Q. Have you discussed the case with Dr. Noll?	19	Q. Okay. Since submitting your declaration, what
20	A. No.	20	work have you done?
21	Q. Have you ever had a discussion with Dr. Noll	21	A. I've done some simulation work on on the
22	at any time in your life?	22	properties of clustered standard errors.
23	A. No, I don't believe we've met.	23	Q. Okay. Anything else?
24	Q. Okay. Did you have any support staff or any	24	A. And and working out some formulas that can
25	other person who assisted you?	25	explain the simulation findings.
	Page 11		Page 12
1	Q. Okay. Anything else?	1	titles were of those works?
2	A. No.	2	A. The main the the one was the paper I
3	Q. Did you prepare for the deposition?	3	published in the American Economic Review called the
4	A. Yes.	4	Cluster Cluster Sampling and Applied Econometrics.
5	Q. And, just briefly, describe what you did to	5	Q. The 2003 paper?
6	prepare for	6	A. Yes, uh-huh.
7	A. I read	7	Q. With respect to the let me just see what
8			
9	Q. And I don't want to hear any conversations	8	that is.
	that you had with counsel. You can tell me if you met	9	that is. MR. KIERNAN: Do I have to hit escape to go

	Page 13		Page 14
1	actually showed what I was claiming.	1	define a distribution such as a normal distribution or a
2	Q. And are you relying on those simulations for	2	quasi distribution or something like that and then you
3	any of the opinions that you're giving in this matter?	3	randomly sample from that from a random variable that
4	A. Not necessarily. I guess I didn't rely on	4	has that distribution. It's a very common method used
5	them in my declaration and so I'll be talking about	5	to evaluate any kind of estimator that somebody proposes
6	my the opinions in my declaration, which haven't	6	in econometrics or statistics.
7	changed.	7	MR. KIERNAN: How do I get this going again?
8	Q. Okay. So you're not relying on the	8	THE REPORTER: Hit the pause button.
9	simulations that you've done after submitting your	9	MR. KIERNAN: Pause break? Say again?
10	declaration as a basis for any	10	THE REPORTER: Use your mouse and
11	A. NO.	11	MR. KIERNAN: Oh, I see it.
12	Q of the opinions in your report?	12	THE REPORTER: And hit
13	A. No, I'm not.	13	MR. KIERNAN: Got it, got it. Thank you.
14	Q. Okay. In in the simulations, what was the	14	BY MR. KIERNAN:
15	dataset that you used?	15	Q. I notice in the declaration you note that
16	-	16	_
10		10	you've done some consulting work, like you worked for CRA and
17	some assumptions about what the population distribution	18	
	is and then draws randomly from using a standard	10 19	
19	program, such as Stata, to draw random samples from the		Q. Okay. Have you done any work, provided any
20	population.	20	opinions, in antitrust cases or any antitrust matters?
21	Q. And the when you're referring to the	21	A. Yes.
22	population, what's the dataset for that?	22	Q. Okay.
23	A. When	23	A. Back with the Charles River Associates work I
24	Q. That's part of the simulation program?	24	did some econometric work at the request of Frank Fisher
25	A. Yes. So when you define a population you	25	on the Kodak Polaroid patent infringement case. And at
	Page 15		Page 16
1	one point I also did work there was a case where the	1	consulting work that you're doing in connection with
2	NBA was suing, I believe, the the super station in	2	that?
3	Chicago, WGN, for showing Chicago Bulls games with	3	A. We're estimating damages from the oil spill
4	Michael Jordan nationwide.	4	based on consumer willingness to pay.
5	Q. Okay. Any others that you can think of?	5	Q. And you said "we." Are there other people
6	A. I wish my memory were better. I I did do	6	involved?
7	some more cases for Charles River Associates. There was	7	A. Yes.
8	a case having to do with airline reservation systems, I	8	Q. Okay.
9	believe. And that's as much as I can remember.	9	A. It's it's a large team.
10	Q. And have you ever been retained excuse	10	Q. And what is your role?
11		11	A. My role is mainly as the econometrician to
	me to estimate the impact of some conduct on the		
12	prices of consumer products?	12	think about sampling issues and model estimation issues
<b>12</b> 13	prices of consumer products? A. No.	13	think about sampling issues and model estimation issues and how to compute standard errors.
12 13 14	prices of consumer products?	13 <b>14</b>	think about sampling issues and model estimation issues

Page 18 Page 17 MS. SWEENEY: If it's confidential --1 Wooldridge 1. Can you identify as -- Wooldridge 1 as 1 THE WITNESS: It's confidential. 2 2 the declaration -- as your declaration that you 3 MS. SWEENEY: I'll just object to form. 3 submitted in this case? 4 THE WITNESS: Sorry. That is confidential 4 Α. Yes, it is. information. Okay. And is it -- does Wooldridge 1 contain 5 5 Q. 6 BY MR. KIERNAN: 6 all the opinions that you're offering in this matter? 7 Okay. And -- and just so I have it -- the 7 Α. Yes. Q. record clear, even the type of model that you are or not 8 8 0. And contains all the bases for those opinions? 9 using to estimate damages in the case, your testimony is 9 Α. Yes. 10 you cannot describe it for me because of a protective 10 Q. And does it list all the materials that you order --11 11 relied on? 12 12 Α. Yes. Α. Yes. 13 ο. -- in that matter? 13 ο. Okay. And did you draft Wooldridge 1? 14 Α. Yes. That's correct. 14 Α. Yes. 15 Other than that matter, have you been retained 15 Did anyone else assist you with drafting it? Q. Q. 16 to estimate or consult in estimating damages? 16 Α. Counsel read through and made small editorial 17 Α. 17 comments. No. 18 MR. KIERNAN: All right. Let me have his 18 Did you review any deposition transcripts? 0. 19 report. 19 Α. Yes, I did. I read the Noll report, both the 20 initial report and the rebuttal, and the Murphy and Can mark that as -- why don't we mark it as 20 21 Wooldridge 1 because I don't think we've been doing them Topel reports. 21 22 sequentially. 22 **0**. Okay. 23 23 (Exhibit 1 marked.) MS. SWEENEY: I -- I --24 BY MR. KIERNAN: 24 MR. KIERNAN: I'm going to -- I'll clarify. 25 Okay. I'm handing you what's been marked as 25 BY MR. KIERNAN: Q. Page 19 Page 20 What I mean by "deposition transcript" --1 ٥. Dr. Topel, they also listed a number of documents that 1 2 Oh, deposition --2 they considered? Α. 3 -- is --3 Yes. Q. Α. Oh, I'm sorry. Not --4 Q. And did you review any of those? 4 Α. 5 0. Like today we have a deposition and then --5 Α. No, I did not. I did not read any deposition transcripts. Did you review a supplemental report that was 6 6 Q. Α. 7 7 Okay. jointly signed by Drs. Murphy and Dr. Topel? 0. 8 I'm sorry. Yes. 8 Α. If it's the -- the recent one --Α. 9 Q. And did you review the -- any of the data --9 ο. Ves. 10 the datasets that Dr. Noll used in his regressions? 10 Α. -- yes, I did. No, I didn't see the datasets. Did you review the regression equations used 11 Α. 11 **0**. 12 Okay. Did you review the documents that Dr. 12 by Dr. Noll? 0. 13 Noll cites in his reports? 13 MS. SWEENEY: Objection. Vague and ambiguous. 14 Α. Um --14 THE WITNESS: I -- I looked at the equations 15 MS. SWEENEY: Objection. Overbroad. 15 and the reported standard errors, but I did not evaluate 16 THE WITNESS: Did I -- I was familiar with 16 the equations for content. 17 some of the econometrics works that he cited, but I did BY MR. KIERNAN: 17 18 not review -- he has previous dec- -- declarations 18 Okay. And did you evaluate the -- well, **0**. 19 listed there. I did not review those or any of the 19 strike that. 20 other -- there was a long list, I believe, of documents, On page 2 of Wooldridge 1 of your declaration, 20 21 and I did not look at them. 21 at the bottom, you state, "I restrict my comments to 22 BY MR. KIERNAN: 22 issues associated with computing proper standard errors 23 23 and do not discuss model specification." **0**. Okav. 24 Α. I had a limited amount of time. 24 Do you see that? 25 25 A. Yes. **0**. And do you recall that Dr. Murphy and

	Page 21		Page 22
1	Q. And what do you mean by "model specification"?	1	damages estimate?
2	A. Well, every regression analysis has a	2	A. I would need to study what he did in much more
3	dependent variable, which you're trying to explain, and	3	depth to to to comment on that. And I wasn't
4	a set of explanatory variables sometimes called	4	asked to do that and I I formed no opinion on that.
5	independent variables. And different people can have	5	Q. Fair enough. Fair enough. Okay. So you have
6	different opinions on what those variables should be.	6	not formed an opinion on whether Dr. Noll's regressions
7	And I was not asked to evaluate that part of Dr. Noll's	7	produces reliable damages estimates?
8	analysis and so I haven't formed an opinion. I didn't	8	A. That's correct.
9	look at the equations with an eye toward did I think	9	Q. And no opinion on whether the conduct at issue
10	this was proper or not.	10	in this litigation impacted iPod prices?
11	I was asked to do something fairly narrow,	11	A. Correct.
12	which was evaluate the clustering issue. And that's	12	Q. No opinion on the amount of damages?
13	what I spent my limited time on.	13	A. That's correct.
14	Q. Okay. Okay. So you're not offering an	14	Q. What is your understanding about of what
15	opinion on the model specification?	15	this case is about?
16	A. That's correct.	16	A. Oh, well, there were certain versions of iPods
17	Q. And not offering an opinion on whether he	17	that were installed with software that essentially
18	included the correct explanatory variables or what you	18	blocked a competitor's software that allowed downloading
19	called the independent variables?	19	music from competing sites other than the iTunes store.
20	A. That's correct.	20	But I I have to say I focused my attention on the
21	Q. Not offering an opinion on whether the	21	cluster sampling issue. I understood what the data
22	regression suffered from omitted-variable bias?	22	structure was and what the basic question was, and I
23	A. Correct.	23	didn't think in-depth about what the actual antitrust
24	Q. And no opinion on whether Dr. Noll's	24	issue is here.
25	regressions estimate or provide or produce a reliable	25	Q. Okay. And what is the basis for your
1	Page 23 understanding of what the data structure used by Dr.	1	Page 24 could have been many iPods.
2	Noll in his two regressions is?	2	Q. Okay. So ship when you used the term
3	A. He has transactions level data for shipments	3	"shipment" previously you're referring to transaction?
4	of various classes of iPods, along with information	4	A. Yes.
5	about the characteristics of the iPods and the prices at		11. 100.
6	÷		
ľ	which the transactions occurred in including when		
7	which the transactions occurred, in including when they occurred		
7	they occurred.		
8	they occurred. Q. And you understand Dr. Noll has two

And I when you say shipments of iPods, what are you referring to?</li> <li>A. Well, I call them transactions, I believe.</li> <li>But a shipment is for the the purposes of the data analysis what matters is that there's a transaction that</li> </ul>		

001	rey woolariage, Ph.D.		The Apple IPod ITunes Anti-Trust Litigation
	Page 25		Page 26
1	population"?	1	opinions in the case?
2	A. Well, my understanding is that Apple provided	2	A. Uh-huh.
3	every every transaction over this ten- or 11-year	3	Q. Okay. And with respect to the first,
4	period and except for a couple that were dropped due to	4	"Clustering is inappropriate where, as here, the
5	missing data issues and, I believe, some outlining	5	regressions use the entire population of transactions,"
6	observations, he has every transaction ever done.	6	is it your opinion that clustering is inappropriate
7	Alternatively, Apple could have said, "Here's	7	whenever the entire population is used?
8	a 10 percent random sample of our transaction," and then	8	A. It no. It it could be appropriate if,
9	it would have been a random sample from that population,	9	for example, you use information from other units, other
10	but instead he has all the transactions.	10	transactions in the data as part of an explanatory
11	Q. And all the transactions worldwide or just in	11	variable in a transaction for a particular transaction.
12	the United States?	12	So but Professor Noll did not do that.
13	A. I didn't read it that that closely. Sorry.	13	Each transaction was its own separate unit and
14	So if	14	each provides independent information on prices at which
15	Q. Okay.	15	these transactions occurred, given the given the
16	A if it's just in the United States, then	16	characteristics of the the different iPods and the
17	it's the pop then that defines the population.	17	different time periods when they were purchased.
18	Q. Okay. And so your understanding is that the	18	Q. Going back to the circumstance that you
19	transactional data for used for both regressions	19	described where clustering could be appropriate when
20	contain virtually every iPod sold in the U.S. during the	20	using the entire population of transactions, you say it
21	time period?	21	could be appropriate if, for example, you use
22	A. Yes.	22	information from other units other transactions in a
23	Q. If you go to page 13	23	transaction for a particular transaction.
24	A. Yes.	24	A. I better clarify that.
25	Q does paragraph 6 list the summary of your	25	Q. Please.

Frankly, I can't think of a reason you would do that. It it makes no sense to me to say that a transaction that happened someplace else, some other time period, would somehow have an effect on the price of this particular transaction when and and the point is Professor Noll didn't do it, so there's nothing to to be concerned about here. Q. So, in your opinion, there's no circumstance under which clustering could be a problem with respect to the data that Dr. Noll used to estimate his regressions? A. That's correct. Let's and let me let me expand on that a little bit. I mentioned that he has, essentially, the entire population of transactions. He he could have or Apple could have given him a 10 percent random sample. There're easy ways to generate a random sample from a large population like that. And then he would,

		-	
1	Page 29 have been been drawn to represent the population and	1	Page 30
2	independently.	2	Q are there circumstances under which
3	And so if you, then, say, well, what if he	3	clustering would be appropriate dealing with iPod
4	took an additional 10 percent of the sample, then he	4	transactions?
5	would have more data and that would be reflected in the	5	A. With iPod transactions? I don't see how
6	standard errors falling because you're getting more	6	not not the way it these were sampled
7	data. And, again, because it's a random sample, there's	7	transaction by transaction and so there can't be a
8	no reason to cluster and clustering, in fact, only could	8	cluster sampling problem if that's the way the the
9	inflate the standard errors in an artificial way. And	9	data had been sampled.
10	by the time you get up to the population having the	10	Q. Is it your opinion that the resid that the
11	whole population is not a problem. That's a that's a	11	error terms in Professor Noll's regressions are
12	good thing. You have more information. You want more	12	independent?
13	data to more precisely estimate the coefficients in the	13	A. They're not independent ex post after you
14	regression model.	14	choose the clusters, and it's very, very simple to see
15	So that's why I assumed that a 10 percent	15	that. The clustering of a either the entire
16	random sample wasn't taken because it's better to use	16	population in this case or a random sample create
17	more data than than less data.	17	artificially creates a problem that isn't there. So the
18	Q. Right. And so your opinion is that if	18	idea is and and let's take a simple example of
19	you have the entire population of iPod transactions	19	this.
20	there's no circumstance under which clustering would be	20	Suppose that we wanted to estimate and make
21	appropriate?	21	this simple we want to estimate the average, let's
22	A. That's correct.	22	say, hourly wage in the population of all hourly wage
23	Q. And you state, "There can be no cluster	23	workers. The way we would do that and, of course,
24	sampling problem because there is no sampling."	24	that's a that's a big population in the United
25	If there were sampling	25	States. And surveys do this, they go out and they
	Page 31		Page 32
1	collect a random sample of hourly wage workers and they	1	workers in the service industry, those, very likely,
2	compute the sample average.	2	will be negative on average because service workers
3	The sample average is the simplist example of	3	earn or, let's say, fast-food workers earn a lower
4	an OLS estimate, an ordinary least squares estimator.	4	hourly wage than the overall average.
5	It minimizes the sum of squared deviation. So it is	5	If you go to the computer programmers, you're
6	it is an example, essentially, of what Professor Noll is	6	
7	doing. Of course, regression analysis is a little more		going to find that that residual is positive because on
0	doing. Of course, regression analysis is a fittle more	7	going to find that that residual is positive because on average they earn more than the total average in the
8	complicated, but but let's stick with that.	7 8	average they earn more than the total average in the population. In fact, the difference is simply the
9			average they earn more than the total average in the
	complicated, but but let's stick with that. Suppose that so the proper thing to do would be to collect a random sample and you can look at	8	average they earn more than the total average in the population. In fact, the difference is simply the
9 10 11	complicated, but but let's stick with that. Suppose that so the proper thing to do would be to collect a random sample and you can look at any introductory statistics book and it will show you	8 9 10 11	average they earn more than the total average in the population. In fact, the difference is simply the average residual is just the average of the hourly wage for computer programmers minus the overall average. This is exactly what Murphy and Topel do.
9 10 11 12	complicated, but but let's stick with that. Suppose that so the proper thing to do would be to collect a random sample and you can look at any introductory statistics book and it will show you the formula for the standard error, which is the	8 9 10 11 12	average they earn more than the total average in the population. In fact, the difference is simply the average residual is just the average of the hourly wage for computer programmers minus the overall average. This is exactly what Murphy and Topel do. They, then, do this ex post clustering, and they they
9 10 11 12 13	<pre>complicated, but but let's stick with that. 	Page 33		Page 34
1	A. Yes, I do.	1	systematically changes by that feature you will find
2	Q. Okay. And what's the basis for that?	2	that there's been cluster correlation because you've
3	A. The the basis is that we know how to	3	induced it by this this clustering that wasn't
4	compute the proper standard errors, which is how	4	necessary.
5	Professor Noll does it, and the clustering only the	5	Q. You stated that there aren't tests because the
6	clustering ex post induces correlation. And so if	6	tests are going to give you the conclusion I just said.
7	you add the term that's at the end of the cluster, the	7	A. There there aren't
8	cluster robust standard errors, it's positive on average	8	Q. Sounds
9	for exactly the the reason I just explained, using	9	A useful tests. There aren't there aren't
10	the simple example of hourly wages, because you've	10	useful tests.
11	clustered workers, say, by their occupation and you know	11	Q. So there are no tests?
12	that workers in certain occupations are going to be	12	A. That's correct.
13	correlated with each other because they're in that	13	Q. Okay.
14	occupation, so they have either lower than average	14	<ul><li>A. There is theory and there is simulations.</li><li>Q. Are there any simulations that you could run</li></ul>
15 16	wages, they might have average wages or higher than average wages, but those averages move together within	15	Q. Are there any simulations that you could run to test your hypothesis that clustered robust errors
17	each cluster.	16 17	overstate the true standard errors in Professor Noll's
18		18	regressions?
19	Q. And are there procedures or any tests that one could perform to test your conclusion that the clustered	19	A. Yes.
20	errors overstate the true standard errors in this case?	20	0. And what are those?
21	A. There aren't tests because the tests are going	21	A. You can do the exercise that I basically just
22	to are going to give you the conclusion that I just	22	laid out. In fact, we should make this if we were to
23	said. You don't need to test it because you know what's	23	make this about iPods and simplify the setting you could
24	going to happen ahead of time, that if you cluster on	24	do the following: Suppose that there are five different
25	the basis of some feature where the average	25	kinds of iPods, what, classic, mini, nano, shuffle,
	-		
1	Page 35 touch, let's say, and suppose there's just a single	1	Page 36 Q. Okay. And define for me what "family" means
2	before-after period where harmony was blocked and when	2	with respect to iPods.
3	it wasn't. So in this situation what would the right	3	MS. SWEENEY: Objection. Vague and ambiguous.
4	analysis be? If you just wanted an estimate of the	4	Are you asking him well, I I just don't understand

1	Page 37		Page 38
1 2	on average. Q. Are there any is an alternative simulation	1 2	defined more clusters, but that's because there's more time periods and more family the the family the
3	from the one you described well, strike that.	3	number of families is larger in that case.
4	So the simulation that you just proposed would	4	Q. Well, the simple structure that you described
5	be to simplify it by going to the model level rather	5	does not exist; correct?
6	than the family level?	6	A. Oh
7	A. Yes.	7	Q. That doesn't define the data structure?
8	Q. Am I okay.	8	A. It doesn't exist for this
9	A. Uh-huh.	9	Q. In reality.
10	Q. Could you also run simulations using the	10	A particular application
11	family level?	11	Q. Correct.
12	A. You could, yes.	12	A but it defines lots of data structures
13	Q. Okay.	13	that that have been used for intervention analysis,
14	A. Uh-huh.	14	sure.
15	Q. And is one preferable to the other or would	15	Q. Right. But not in this case?
16	you run them both?	16	A. It has the features, though, because, for
17	A. Well, if one had the time, you would want to	17	example, once you have several thousand observations per
18	run a simulation that reflects the particular	18	cluster, then the simpler setting at least helps you
19	application, yes.	19	learn something about how clustering can give you very
20	Q. Okay.	20	overstated standard errors.
21	A. But the the if if the data structure	21	Q. Other than the simulations, are there any
22	had been the simple one that I had proposed, then the	22	other procedures that one could perform to verify or
23	only clustering that could have been done is by the	23	test your claim that clustered robust errors overstate
24	class of iPod. And this is the analogue of what Murphy	24	the true standard errors in Dr. Noll's regressions?
25	and Topel did in their more complicated situation. They	25	A. One could work out the theory, uh-huh.
	Page 39		Page 40
1	Q. And how would one work that out?	1	this. We already know that the original standard error

And so the issue is, really, how much are you going to be wrong by doing the clustering and how more to the point, how conservative will the clustering be. Q. And as you as one increases the number of observations using OLS standard errors, can the bias would the bias tend to increase or decrease? A. Oh, the bias will decrease. In fact, the as I said, in most applications, once you have a 1,000 or a couple thousand observations the standard error that you compute from OLS, even if they're the so-called heteroskedasticity robust standard records do quite well
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	Q. And how would one work that out? A. You start off with the presumption that first first, again, starting under the assumption that you have a random sample and then you see what happens after you cluster on a feature which could be family by quarter of of observation and and show that the what the bias in the clustered standard error is relative to the correct one. The simulation it's important also to understand the the point of the simulation is that you can actually figure out what the proper standard error is Q. Right.  A because you control the data and so you know which standard error is is the one that's close to the one you're trying to get. And the standard error that's going to win convincingly is the usual standard error that does not cluster.  Q. Well, isn't the point of the simulations to see which standard error is going to win?  A. That's correct.  Q. Okay.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	this. We already know that the original standard error is going to do well because in this situation there are many more than 2 million observations in your case, but it would work really well with 1,000 observations, for example, because there's a simple formula that has been derived from theory that has been known for a long time and so we know that that formula is going to work. The only issue is, is there any bias and what is the nature of the bias in doing the clustering when you don't have to? And so the issue is, really, how much are you going to be wrong by doing the clustering and how more to the point, how conservative will the clustering be. Q. And as you as one increases the number of observations using OLS standard errors, can the bias would the bias tend to increase or decrease? A. Oh, the bias will decrease. In fact, the as I said, in most applications, once you have a 1,000 or a couple thousand observations the standard error that you compute from OLS, even if they're the so-called heteroskedasticity robust standard records do quite well in those cases. That, actually, raises an interesting
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	Q. And how would one work that out? A. You start off with the presumption that first first, again, starting under the assumption that you have a random sample and then you see what happens after you cluster on a feature which could be family by quarter of of observation and and show that the what the bias in the clustered standard error is relative to the correct one. The simulation it's important also to understand the the point of the simulation is that you can actually figure out what the proper standard error is Q. Right.  A because you control the data and so you know which standard error is is the one that's close to the one you're trying to get. And the standard error that does not cluster.  Q. Well, isn't the point of the simulations to see which standard error is going to win?  A. That's correct.  Q. Okay.  A. Uh-huh.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	this. We already know that the original standard error is going to do well because in this situation there are many more than 2 million observations in your case, but it would work really well with 1,000 observations, for example, because there's a simple formula that has been derived from theory that has been known for a long time and so we know that that formula is going to work. 1	Page 41 the family quarter level, which does raise the question,	1	Page 42 A the number of groups constant?
2	why not at the month family level or the week family	2	Q. Right.
3	level or the year family level? So how they came up	3	A. Yes.
4	with that clustering, I'm not sure. I don't think	4	Q. Let's call it G.
5	it's it's ever described. But once you've chosen the	5	A. Uh-huh.
6	clustering scheme, the clustered standard errors will	6	Q. So G, using your example, equals ten.
7	never get smaller. They depend only on the number of	7	A. Yes.
8	clusters you've chosen, not on the number of overall	8	Q. Okay. If you increase the number of
9	observations, which is peculiar because if you think of	9	observations per group
10	standard we should think that information is	10	A. Yes.
11	accumulating in a random sample as we get more and more	11	Q per cluster
12	data and that is what happens.	12	A. Uh-huh. And the data have have come from a
13	That's why you see the usual OLS standard	13	random sample.
14	errors heading to zero at the rate one over the square	14	Q. Oh, okay. Well, what if the data comes from
15	to the sample size and the clustered standard errors	15	the entire population?
16	will just stay constant, given the number of groups that	16	A. Well
17	you have. So you're left in the odd situation that	17	Q. What's the impact of using clustered robust
18	having lots of transactions data is viewed as being the	18	standard errors
19	same as having not very much transactions data. And	19	A. Well
20	that's because you're inappropriately clustering the	20	Q as the number of observations per cluster
21	standard errors.	21	increase?
22	Q. And just so I understand your opinion, if	22	A. Well, the traditional standard error, if
23	you keep group size constant	23	you don't if you actually act as if you have the
24	A. If you keep	24	entire population is zero because you have no you
25	Q. It's the G	25	have no sampling error in the in the estimation.
	Page 43		Page 44
1	That's why you have to use a different kind of thought	1	ex post structure that you've imposed on the data after
2	experiment, which is one of which I laid out in	2	you've collected it. So the clustering that you use has
3	section 5 of my declaration that shows you that,	3	no effect on the traditional OLS standard errors as it
4	essentially, with the whole population you can argue	4	should be.
5	that the usual standard errors are the are the right	5	Again, let me give you an example. I mention
6	ones to use and, if anything, they're actually	6	the the hourly wage occupation example. Suppose that
7	conservative because when you have the whole population,	7	in addition to occupation you collected information on
8	there's a a population correction that always reduces	8	highest grade completed, so schooling. Now, if you did
9	the standard errors.	9	exactly the same exercise, if you collect the data
10	So the as you get more and more data,	10	and, remember, the goal here is to just estimate the
11	again, if you fix the number of clusters using the	11	average wage in the population, but you say, I have
12	entire population is operationally the same as getting	12	information on schooling, now I'm going to put people
13	more data in the perspective that I laid out in in	13	into clusters based on the highest grade they've
14	section 5.	14	completed, which might be five, ten categories, you're
15	Q. And would you expect the OLS standard the	15	going to find exactly the same phenomenon.
16	bias of the OLS standard errors to increase or decrease	16	On average, people with lower education are
17	as you increase the number of transactions per number	17	going to have a lower hourly hourly wage, and so
18	of observations per group, keeping the group constant?	18	within that cluster you're going to find correlation.
19	MS. SWEENEY: Objection. Vague and ambiguous.	19	Same thing, people with high levels of education are
20	Incomplete hypothetical.	20	going to have on average a higher hourly wage. So now
21	THE WITNESS: Okay. So let me let me say	21	you've got occupation and you've got education and
22	this again. The data have been collected by random	22	there're two different ways of cluster, so which is the
23	sampling and so the clusters that have been that	23	right one? You know the answer has to be neither is the
24	the usual OLS sustained errors ignore the clustering and	24	right one because you've you've collected it via a
25	they properly ignore the clustering because this is an	25	random sample. The goal is to estimate the population
		1	

Page 54 Page 53 11:36 a.m. 1 you have the entire population of transactions. 1 2 2 (Recess.) MS. SWEENEY: Objection. Asked and answered. 3 THE WITNESS: As I said before, there's only (Mr. Murray telephonically joins deposition.) 3 4 THE VIDEOGRAPHER: Okay. We're back on the 4 one case that I could think of and that's where ex post you -- you group the observations and then you use 5 record 11:59 a.m. 5 6 MS. SWEENEY: Professor Wooldridge, go ahead 6 information that's computed from other transactions as 7 and make those clarifications. 7 part of the regression model for a particular 8 THE WITNESS: The first clarification was the 8 transaction. 9 amount of hours I spent on the case up to writing the 9 This would be like taking a sample of students 10 declaration, that was -- when I said five or six hours, 10 and then computing family income of some peers who live 11 that was the actual time writing the declaration. I 11 next to them and including that in a regression model, spent another six hours reading the background material, but there's nothing like that done in the analysis by 12 12 13 the Noll report and the Murphy and Topel report. 13 Professor Noll. 14 MR. KIERNAN: Okay. 14 BY MR. KIERNAN: 15 MS. SWEENEY: Was there one other one? 15 0. Is that something that could be done with the 16 THE WITNESS: The Noll rebuttal? 16 transactional data for iPods? 17 MS. SWEENEY: No, I'm sorry. I thought that 17 MS. SWEENEY: Objection. Incomplete hypothetical. Vague and ambiguous. you were going to clarify two issues of testimony. 18 18 19 THE WITNESS: Oh, oops. 19 THE WITNESS: It could be done, but I'm not 20 MS. SWEENEY: That's okay. 20 sure why anybody would do that. 21 BY MR. KIERNAN: 21 BY MR. KIERNAN: 22 0. All right. Dr. Wooldridge, I was going back 22 ο. Are there any -through my notes and I -- it wasn't entirely clear to 23 MS. SWEENEY: Hold it. Excuse me. Before we 23 24 me, under what circumstances could clustering standard 24 go on, did -- did anyone join the --25 errors be appropriate when you have all the -- the --25 MR. KIERNAN: Oh, yes. Page 55 Page 56 the true precision of the estimates. 1 MS. SWEENEY: -- the deposition? 1 2 MR. KIERNAN: Scott Murray from Apple is on 2 Α. Yes. 3 3 Q. Are there any other procedures that you can the phone. think of? 4 MS. SWEENEY: Okay. 4 5 MR. KIERNAN: Hi, Scott. 5 Α. No. One -- one has basically two tools at -at one's disposal when trying to evaluate any kind of 6 MR. MURRAY: Hello. 6 7 7 statistical procedure. And since standard errors are a BY MR. KIERNAN: 8 As you sit here today, can you think of any 8 measure of precision of estimates. That measure is Q. 9 circumstances under which one would ex post group the 9 across different realizations or samples of data. And 10 observations of iPod transactions and then use 10 so you can either do a theoretical calculation, which 11 information that's computed from other transactions as uses the tools of statistics to account for the fact 11 12 part of the regression model for a particular 12 that we're seeing different realizations of data or you 13 transaction? 13 can actually do a simulation which creates different 14 A. I can't think of why you would do that because samples or realizations of the data and study the 14 15 a hedonic price regression is about relating the price 15 problem that way. 16 of a particular unit to characteristics of that unit. 16 0. With respect to the theoret- -- you said "theoretical calculation"? 17 And, of course, prices will change over time as demand 17 Yes. 18 in supply, conditions affect prices, but that's the --18 Α. 19 the nature of a before-after analysis where you want to 19 Q. Okay. Have you done a theoretical calculation 20 account for or control for the characteristics of the that's set forth in your declaration that tests the 20 21 particular units that are being transacted. 21 conclusion or hypothesis that Drs. Murphy's and Topel's 22 Earlier you describe two ways, two procedures, 22 clustering standard errors vastly inflate the standard 0. 23 that could be used to test the hypothesis that 23 errors compared with the true precision of the 24 clustering -- that the clustered standard errors by Drs. 24 estimates? A. After writing my declaration, I did do a Murphy and Topel inflate the standard errors compared to 25 25

1	Page 57		Page 58
1	calculation like that, yes.	1	computing the overall population average.
2	Q. Is it in your declaration?	2	Q. And
3	A. No. It happened after my declaration. It was	3	A. And so that
4	to support what I knew had to be true by thinking	4	Q. Go ahead.
5	through the the different kinds of examples.	5	A perfectly explained what Murphy and
6	Q. And have you produced that calculation that	6	Murphy Professors Murphy and Topel were finding in
7	you're referring to?	7	their calculation of clustered standard errors and
8	A. Produced it to?	8	looking at the residuals.
9	Q. To the lawyers in this case.	9	Q. What perfectly explained what Professors
10	A. No.	10	Murphy and Topel were finding in the calculation?
11	Q. And are you relying upon those calculations,	11	A. Well, Professors Murphy and Topel report after
12	the theoretical calculations, for the opinions set forth	12	they do the clustering based on the family by calendar
13	in your declaration?	13	by by quarter, that they to show that there was
14	A. No. What I was relying on was the idea	14	a a problem that needed to be addressed with
15	that and and, again, I have to admit, I scaled the	15	clustering, they computed the residuals within each of
16	problem down so I could think about it better and	16	these clusters and they used as their main piece of
17	thinking about either a few occupational classes or a	17	evidence that or one of the main pieces of evidence
18	few classes of iPod and what would happen in that case	18	that these average residuals were different across the
19	if you clustered on a characteristic such as occupation	19	different clusters.
20	or class of iPod after you collected the data, and it	20	And I said that that is perfectly explained by
21	became clear that, of course, you would find in some of	21	the fact that there the prices are going to be on
22	the clusters there the residuals have a below an	22	average different for different families as well as
23	average below zero, in some cases it would be above	23	different quarters and that in no way implied that the
24	zero. The weighted average of them has to even out, has	24	standard errors had to be computed with with
25	to be zero, because you know that you're you're	25	clustering.

I give an example in my declaration. Q. Sure. But could there be a clustering	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	Are there circumstances A. Oh Q that you can think of where there is a clustering problem or could be? A. No, not with the way the data have been collected. So in in my declaration I use the example that also had prices that you would expect not to to vary much, especially within geographic units and within time and that would be looking at the prices of some standardized item at a fast-food restaurant. The fact that two people might go to the same fast-food chain and pay the same price does not mean that those two observations form a cluster. They're independent draws based on a person's decision to buy or not at that particular price and, in fact, it's the fact that there isn't that much variation in the prices,
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	Q. And what are some of the reasons why the prices would be different for different families? A. Oh, well, of course different places can have different sales going on. They can have this isn't my area of expertise. I as I said, I haven't even looked at the data, and I don't need to to understand that a family decides is presented with a price or a reseller is presented with a price, and they make a decision to buy at that price or not. The fact that those prices may be the same for several families is does not imply that there is a clustering problem. One can think of many situations where where that's true. I give an example in my declaration. Q. Sure. But could there be a clustering problem?	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	Are there circumstances A. 1	will be small and that helps with the precision of the	1	population.
2	estimates. And this is what you find in Professor	2	BY MR. KIERNAN:
3	Noll's calculation where the standard errors there's a	3	Q. Are there factors that could impact the
4	small residual variance and there's a lot of	4	reliability of the precision of the standard errors that
5	observations and so he properly finds small standard	5	Dr. Noll reports?
6	errors in his regression analysis.	6	A. I can't think of any. A standard error
7	Q. Is there a point at which the standard errors	7	calculation is a fairly straightforward thing in most
8	are so low that would cause an econometrician like	8	cases with standard econometric methods such as OLS once
9	yourself to question whether they were accurately	9	you understand how the data have been been obtained.
10	calculated?	10	I should add, he did make the standard errors robust to
11	MS. SWEENEY: Objection. Incomplete	11	heteroskedasticity of unknown form, which means the
12	hypothetical.	12	variance can change in an arbitrary way across
13	THE WITNESS: All I'm concerned about is given	13	transaction and that is the appropriate thing to do.
14	the particular application, the model, the estimation	14	Q. Are there any authorities, textbooks, public
15	method, the way the data have been collected, has the	15	articles that support your conclusion that clustered
16	appropriate method been used or not and with lots of	16	robust errors overstate the true standard errors when
17	lots of observations and with little residual variance,	17	using the entire population of transactions?
17	there's no rule of thumb below which the standard errors	18	
10	would have to hit before you before you got	10	A. Actually, this is fairly recent material. I started thinking about this a couple of years ago when I
20	suspicious. So I would say, no, there isn't there	20	had conversations with two two people that I've
20	isn't some sort of threshold.	20	worked with and we let it go. And since then I've been,
21	I would I I evaluate these on the on	21	after writing the declaration, thinking about the merits
22	the on the merits of the modeling exercise and the	22	
23	-	23	of this case, I've worked out a little bit of theory as well as the simulation.
24	the estimator used and in this particular case on how the sample is is obtained or in this case the	24	It is commonly thought that clustering is,
25	the sample is is obtained of in this case the	25	It is company clought that clustering is,
1	Page 63	1	Page 64 A. Not not for this case.
1	quote, harmless if it's not needed, but this is this	1 2	
2	is not true in the context of clustering after you've	3	<b>Q. Understood.</b> A. Alberto Abadie is an econometrician at Kennedy
	collected a random sample. If you have collected a		-
4	cluster sample and you have a large number of clusters	4	School of Harvard and Guido Imbens is an econometrician
5	and relatively small observations within a cluster,	5	at the Stanford Graduate School of Business. I've
6	then then you can show, as the number of clusters get	6	co-authored with Guido before and I actually do lectures with him.
7	large, the standard errors will approach the right		
8	values, but that's assuming you've collected a cluster	8	
1 2	Camp O	0	Q. And you noted that the three of you let it go.
10	sample.	<b>9</b>	What what did you mean by that?
10	Q. Can you cite to any authorities, textbooks or	10	<pre>What what did you mean by that? A. Oh, it actually we didn't completely let it</pre>

No. Q. Any working paper of a working paper? A. No. Q. And are you working with them now either one of them, now that you've picked this topic back up? A. I believe we will pick the topic up, yes. Q. Okay. Have you talked to them about it?</pre>

1			
	Page 77 Q family has a different feature?	1	Page 78 the usual way are valid even in the first regression
2	A. No. So if you again, if you go back to the	2	where you've omitted X2. The fact that you've omitted
3	case of how the clustering was done, it's not true that	3	X2 does not affect the calculation of the standard
4	you have to account for all of those features in order	4	errors.
5	for the usual standard errors collected under random	5	Q. And what does it affect?
6	sampling to be valid. So	6	MS. SWEENEY: Objection.
7	Q. Go ahead.	7	BY MR. KIERNAN:
8	A for the issue of computing the standard	8	Q. What would it affect under that scenario?
9	errors and that that's why I'm not commenting on	9	MS. SWEENEY: Vague and ambiguous.
10	model specification no, it doesn't matter that there	10	Incomplete.
11	are some features that may not have been accounted for	11	THE WITNESS: Well, it
12	or some interactions of features or something like that.	12	BY MR. KIERNAN:
13	That's a modeling question. That's not a question about	13	Q. I'm not going to use let me strike that.
14	the standard errors.	14	I want to use a hypothetical that you were
15	Q. Well, isn't the	15	just using and you said that omitting the variable would
16	A. So this	16	not affect the calculation of the standard errors.
17	Q. Go ahead.	17	Would omitting the variable effect anything else in the
18	A. So this is this is a common misperception.	18	model?
19	If you take again, let's just start with a a large	19	MS. SWEENEY: Objection. Vague and ambiguous.
20	population and you're going to take a large random	20	THE WITNESS: Well, sure, it could bias the
21	sample and you're going to estimate two models. You	21	coefficient the coefficient and the simple
22	have Y and you have X1 and X2 and you regress Y on X1	22	regression.
23	and you regress Y on X1 and X2.	23	BY MR. KIERNAN:
24	Now, whether you should include X2 or not is a	24	Q. And so and is that what you referred to in
25	modeling issue. The standard error that you compute in	25	your book as omitted-variable bias?
	Page 79		Page 80
1	A. Yes.	1	it. And so you can write Y as a linear function of X1.
2	Q. And is it your testimony that omitted-		
1	~	2	It may not have the coefficient that you want, but you
3	variable bias omitted-variable bias has no impact on	3	It may not have the coefficient that you want, but you can always do that and you can always write the model
3 4			
	variable bias omitted-variable bias has no impact on	3	can always do that and you can always write the model
4	variable bias omitted-variable bias has no impact on the on reliably calculating the standard errors for a	3 4	can always do that and you can always write the model for Y as a function of X1 and X2. Once you have a random sample, the calculation of the standard errors is standard. There's no adjustment that needs to be made

6	Q. Go ahead. You said usually there are various	6	that example where you had X1 and then you had X1 and
7	factors that can	7	then X2, and it is, I believe, common some
8	A. Right. So if for example, if there are	8	somewhat commonly thought that the omission of X2 can
9	systematic differences across family and calendar year,	9	somehow affect the calculation of the standard error for
10	then those differences would be included in the error	10	the coefficient on X1, but that's that's not true
11	term.	11	under the sampling scheme that we're talking about,
12	Q. And would if there are omitted product	12	random sampling or knowing the population.
13	attributes that impact price, would those be captured in	13	Q. Okay. In the let me back up a step or two.
14	the error term?	14	How is the standard error calculated? As Dr. Noll
15	A. The well, let me let me answer that like	15	using Dr. Noll's regression, how did he calculate the
16	this: If it's not necessarily what is in the error	16	standard errors?
17	term that is that's important. It's basically if	17	A. So he you would take the residuals from the
18	you're trying to learn about the coefficient on a	18	regression and from those residuals so the the
19	particular variable the question is whether you've	19	basic calculation that you learn in your first
20	included enough of the other factors.	20	econometrics course estimates the variance of the error
21	So if there I mean, as I tried to explain	21	term by using the sum of squared residuals from the
22	before, the the nature of the error term, whether it	22	regression and then dividing it by a degrees of freedom
23	includes omitted factors or not, does not affect the	23	correction and then that gets multiplied by the
24	issue that I was asked to to evaluate, which is the	24	so-called X prime X inverse matrix. And that's the
25	clustering issue.	25	valid that's the valid calculation for the variance
25	clustering issue.	25	
1	Page 83 estimate under the assumption that the variance of the	1	Page 84 the
2	error term doesn't depend on any of the factors you've	2	A. Well, if for example, if the data were
3	included in your regression model. And there's an	3	truly collected by a cluster sample so that you were
4	adjustment that allows for that variance to be	4	sampling clusters rather than individual units, then
5	unrestricted, an unrestricted function of those factors	5	there would be some then that usual calculation of
6	that is a little more complicated than that.	6	the heteroskedasticity robust matrix would not be
7	0. And and what is that?	7	correct, but that is assuming that you have collected
8	A. It's the so-called Eicker Huber White	8	you have cluster sampling.
9	Estimator, which sometimes is called a sandwich	9	Q. Are there any circumstances under which ex
10	estimator because the way the formula appears where on	10	post clustering, as you've described it in your report
11	the inside there's a more general matrix that's	11	and today, would be appropriate when calculating
12	_	12	standard errors when dealing with an entire population
12	estimated that allows for the squared error term to be correlated with the Xs and that's where the robustness	12	of transactions?
14	to heteroskedasticity comes from.	14	A. It it depends on the regressors that were
14 15		14	
15	Q. And in calculating the standard errors, is there an assumption that the error terms in the	15	included the the factors that that are included in the model and as long as those factors are specific
	_		to the individual transaction, then, no. And that's
17	regression are independent of one another?	17	to the individual transaction, then, no. And that's what Professor Noll did.
18 19	A. Yes. Well, the the the foundation of my	18 19	
	book, actually, in in the case of random sampling,		Believe early I men earlier I mentioned
20	they're always independent of one another. So when you	20	a a case where if you sampled students independently, but then after the fact looked for peer effects by
	have a random sample there's no issue about whether	21	but then after the fact looked for peer effects by
21	they're independent or not because they automatically	22	looking at, you know, children who live near them and so
22	have to be	22	on then that gont of addition to the model would
22 23	have to be.	23	on, then that sort of addition to the model would or
22	have to be. Q. Right. And what about the case when it's not a random sample? Are you applying that assumption that	23 24 25	on, then that sort of addition to the model would or possibly could induce cluster correlation within the errors.

### Confidential - Attorneys' Eyes Only The Apple iPod iTunes Anti-Trust Litigation

Page 85 Page 86 1 With respect to that example -- I'm glad you -- what factors would an econometrician 1 0. 2 brought it up -- at what level would you cluster in that 2 consider in determining the level of clustering in that scenario? 3 example that you just gave? 3 4 A. Um, you would define -- typically what you 4 Α. Again, you'd have to first define what the would do is you would have to define the notion of who peer group is and then that would determine the level of 5 5 б are the potential peers for a particular student. And б clustering. So if --7 7 so it might be something like the classroom or something Q. Based on what? Based on what factors? I 8 like the, you know, school and then you would compute an 8 mean --9 average once you have defined what the peer group is and 9 Α. Well, in -- in -then you would include those and so you would cluster at Q. -- what would an econometrician consider? 10 10 11 that level. 11 Α. -- in that particular example, it's -- it 12 Q. And what factors would an econometrician 12 actually doesn't have anything to do with being an 13 consider when deciding at what level -- the level of econometrician. That's the sort of question that the 13 14 clustering, whether it was, in your example, the 14 person undertaking the empirical work has to decide, 15 classroom or something else, some other level? 15 what -- what sort of children do I think affects a 16 A. Well, ideally in the case where you've particular child's outcome? So it would be up to you to 16 17 actually collected a cluster sample, that determines it specify ahead of time that it's, you know, the 17 for you because you know what the clusters actually are. neighborhood or the classroom or something like that. 18 18 19 And the other consideration is if you include 19 Q. Okay. And my view of that may be different 20 explanatory variables that are created by defining 20 from some other --21 clusters, then that would also define the level of 21 Α. That's correct. 22 clustering. 22 Q. -- somebody else's. 23 Q. And -- and going back to your example where 23 So it's a matter of judgment -the data was not collected by cluster sampling --24 24 Α. Uh-huh. 25 A. Uh-huh. 25 -- of the person running the study? Q. Page 87 Page 88 1 Yes. But if there are -- if there are no -- we randomly sample from the population --Α. 1 Α. 2 so-called peer effects included in the equation, then 2 Q. Right. 3 there's no need to cluster. 3 -- and then I said where you might have to Α. Q. And -- one second. cluster is when you create a peer effect. And then I --4 4 If under that scenario there was no peer 5 5 I -- maybe I misunderstood you. effect, but the researcher did cluster by the -- by the 6 Q. No, no. 6 7 peer clustering level, as you suggested --7 You -- you said, but suppose there is no pure Α. 8 A. Uh-huh. effect and you cluster anyway, well, that can only 8 9 Q. -- what impact, if any, would that have on the 9 increase the standard errors on average. 10 precision of the standard errors? 10 What I was referring to, Dr. Wooldridge, is I 0. A. Well, it depends on the -- if you had a large 11 11 want to understand when you stated -- what you meant by 12 number of clusters with few observations, then the 12 the original standard errors are correct and you were 13 13 effect might be fairly small. But then you would see referring to --14 that the effect is fairly small. That's the -- the A. I mean the ones that were obtained via the 14 15 proof, essentially, is in the pudding, is that since you 15 Eicker Huber White heteroskedasticity robust formula, 16 know that the original standard errors are correct, if 16 yes. 17 you do the clustering and it matters a lot, then you've 17 Q. By drawing a random sample? 18 either got an unusual sample or the cluster effects have 18 Α. Yes. 19 a bias in them -- I'm sorry -- the clustered standard 19 Q. I asked you are there circumstances under 20 errors have a bias in them. 20 which ex post clustering, as you've described it in your 21 Q. And, then, knowing that -- sorry -- you said 21 report and today, would be appropriate when calculating 22 since you know that the original standard errors are standard errors when dealing with an entire population 22 23 correct. 23 of transactions. Do you recall that question? 24 A. So the situation was --24 Α. I do. 25 Q. Yeah. 25 ο. Okay. Depends on what regressors were

	Page 89	1	Page 90
1	included, the factors that are included in the model, as	1	clustering, as you described it in your report and
2	long as those factors are specific to the individual	2	today, would be appropriate when calculating the
3	transaction, then, no, and that's what Professor Noll	3	standard errors?
4	did.	4	MS. SWEENEY: Objection. Asked and answered.
5	What is an example when there are factors that	5	THE WITNESS: So, again, if you are using
6	are not included where ex that would make ex post	6	information from the transaction that has been drawn,
7	clustering appropriate	7	the answer is, no. Only if you've created a problem
8	A. There	8	where you, essentially, use information from other
9	Q or something to be considered?	9	observations can you create a clustering problem in that
10	A. There there aren't any unless you actually	10	setting.
11		10	BY MR. KIERNAN:
	create these clusters ex post. So, in other words,		
12	you'd have to make a conscious decision that you wanted	12	Q. Ex post clustering, is that a generally
13	to to include information about other transactions	13	accepted term in econometrics?
14	directly in the equation for this particular	14	A. There's something closely related called ex
15	transaction.	15	post stratification.
16	So, again, maybe I'm not you would be the	16	Q. And is it your testimony today that those are
17	cause of the clustering problem because you decided to	17	the same thing?
18	do that. If you don't decide to do that, then there	18	A. No, they're not the same thing.
19	can't be a clustering problem.	19	Q. Okay.
20	Q. Yeah, I think you and I are talking past one	20	A. But they're
21	another.	21	Q. Focusing on ex post clustering, is that a term
22	My question is maybe I'll ask reask the	22	that is used in the field of econometrics?
23	question.	23	A. That's a good question. I'm not sure I could
24	Are there any circumstances where you have the	24	point to a source for that, actually. I basically
25	entire population of the data in which ex post	25	the idea is that for a long time cluster sampling was
	Page 91		Page 92
1	understood to be you sample clusters from the population	1	A. The closest thing, which, again, the the
2	and this notion that you would, essentially, take a	2	whole population versus sampling is a bit of a red
3	random sample and then create clusters after you've,	3	herring here because if if we had taken a a large
4	essentially, observed the random sample is, I think, a	4	random sample, then the conclusions would would be,
5	fairly recent phenomenon and turn it turns out to be	5	essentially, the same. The closest I can think of is my
6	incorrect.	6	own work on talking about inappropriately clustering a
7	Q. And what authority can you point to that	7	stratified sample.
8	supports your conclusion that ex post clustering is	8	Q. And where's that work?
9	incorrect, as you just put it?	9	A. That's the American Economic review paper, the
10	A. Well, I I like to think of myself as an	10	2003 paper.
11	authority on this, and this is an issue that has come up	11	Q. And is it your testimony that that paper
12	in this particular case, and it's come up in some other	12	states that ex post clustering is inappropriate when
13	areas that I'm aware of. That's why, in fact, I mention	13	dealing with an entire population of transactions?
14	the two authors that I've been working with started	14	A. No. It's so let's be clear. It's a a
15	talking about this problem a couple of years ago. So I	15	statement about how clustering, when the data had been
16	quess I and my coauthors are the authorities.	16	collected from a stratified sampling, is inappropriate.
17	Q. And can have you published any peer review	17	Q. And is the was the data in that's used
18	articles that support your conclusion that ex post	18	by Professor Noll, was that collected from a stratified
19	clustering is inappropriate when dealing with an entire	19	sampling?
20	population?	20	A. No. So a special case of stratified sampling
21	A. Not on that specific topic, no.	20	is random sampling and so if he had thrown out, you
21	Q. And are you aware of any peer-reviewed	21	know, 80 percent of the data and called that a random
22	articles or other publications that support the	22	sample, then it would apply apply directly to that
23	conclusion that ex post clustering is inappropriate when	23	
			case. But, as I said before, when you collect more
25	dealing with the entire population?	25	data, that's only a good thing. So the different the

Page 93 Page 94 issue of the population versus the sample is irrelevant 1 MS. SWEENEY: Please don't -- David, don't 1 here for the clustering issue. 2 2 interrupt. 3 So yours and Dr. Noll's opinions with respect 3 **0**. MR. KIERNAN: He had stopped --4 to the population are irrelevant to the issues in the 4 THE WITNESS: Yeah, and -case of whether clustering is appropriate? MR. KIERNAN: -- and I started. So I didn't 5 5 6 MS. SWEENEY: Objection. Misstates his 6 interrupt him. He actually interrupted me. 7 7 THE WITNESS: That was my fault, yeah. testimony. Argumentative. 8 THE WITNESS: No, I think that -- that's 8 BY MR. KIERNAN: 9 not -- certainly not what I said. The --9 **0**. But go ahead. 10 BY MR. KIERNAN: 10 The -- again, if you take the millions of Α. 11 0. How is it relevant then? 11 transactions that are in the population and you took a 12 How is? random sample from those, okay, the clustering on the Α. 12 13 How is -- how is the fact that, in your view, 13 basis of characteristics that you, you know, observe 0. 14 that Dr. Noll had the entire population of iPod 14 like the family in the quarter, would be the incorrect 15 transactions relevant to the opinions that you're 15 thing to do. 16 offering in this case? 16 As you get more and more data, that doesn't 17 MS. SWEENEY: Objection. Asked and answered. 17 change and so whether you think of that as the entire 18 THE WITNESS: I'm not sure how I can answer 18 population or a larger random sample, essentially you --19 that differently. 19 you get -- you get the same answer. 20 BY MR. KIERNAN: 20 MS. SWEENEY: The spotlight is on you. 21 Q. 21 MR. KIERNAN: But the documents are great. Well, you stated --22 Α. So -- so, again -- so --22 We're all laughing because I made a joke. BY MR. KIERNAN: 23 BY MR. KIERNAN: 23 24 -- the issue --24 **0**. Your opinion that there can be no cluster Q. 25 Okay. So let me --25 sampling problem because there is no sampling, what Α. Page 95 Page 96 authority supports that opinion? 1 In your report you describe the -- section 5 1 ο. 2 The argument that I just used for you, that --2 you referred to it a couple of times today -- to the Α. 3 unconfoundedness assumption. Q. Okay. 3 -- the --Α. Uh-huh. 4 Α. 4 5 **0**. Any peer-review publication that supports your 5 0. Do you recall that? And define that for me. opinion that there can be no cluster sampling problem That means that the assignment to the 6 6 Α. 7 7 because there is no sampling? treatment in the control group doesn't depend on, in 8 MS. SWEENEY: And I'd just like to interject 8 this case, what the price differential would be under 9 an objection and ask the witness, you can go ahead and 9 two regimes. So think of -- think of it before harmony was blocked and after harmony was blocked and actually 10 finish your prior answer that Mr. Kiernan interrupted. 10 11 BY MR. KIERNAN: just -- you don't have to bring time into it, just two 11 12 **0**. And if I did interrupt you, I did not mean to. 12 states of the world, harmony is blocked, harmony is not 13 So, again, the -- when you have a large 13 blocked. And then you see some units where that was Α. population you could take a random sample from that in true and some units where that wasn't true and the idea 14 14 is that the intervention is independent of what the 15 which case there's no justification for the clustering. 15 16 0. Yeah. I understood your argument. What I'm 16 difference in prices would have been in the two states 17 asking is what peer-reviewed authorities can you cite to 17 of the world. 18 18 me just --**0**. And what circumstances must exist for the 19 A. For the population problem, I -- I can't. 19 unconfoundedness assumption to hold? 20 MS. SWEENEY: And, again, I'm going to ask you 20 Well, there -- you could have an experiment Α. 21 to stop interrupting the witness. You -- every time he 21 where you have a random intervention or you can have a 22 starts to give an answer, you interrupt if you don't 22 before-after where you have included enough factors so 23 like it. You're not entitled to do that. So please 23 that it's -- the intervention is effectively random 24 don't interrupt the witness anymore. 24 after you've included those factors. BY MR. KIERNAN: 25 And have you examined whether or not with 25 0.

### Confidential - Attorneys' Eyes Only The Apple iPod iTunes Anti-Trust Litigation

Page 97 Page 98 respect to Professor Noll's two regressions the definitions you're seeing correlation within those 1 2 unconfoundedness assumption holds? 2 clusters does not say that you should use cluster robust A. That's more -- that's a modeling question, so 3 3 inference. 4 I did not think about that, yes. 4 Q. In your textbook you note that "We should not expect good properties of the cluster robust inference 5 Q. And so you're not offering an opinion on 5 6 whether or not the unconfoundedness assumption applies 6 with small groups and very large group sizes when with respect to Professor Noll's two regressions? 7 7 cluster effects are left in the error term." That's correct. 8 8 Α. Do you recall saying something along those 9 If there were important variables that 9 lines? 0. 10 explained prices of iPods that were left out of the 10 Α. Yes, uh-huh. 11 regression, could that cause the unconfoundedness 11 Q. What do you mean by that? MS. SWEENEY: Can -- can -- can I interject 12 assumption to be violated? 12 13 A. Yes, it could and -- but I don't have an 13 for a moment? Do you have a copy of that? 14 opinion on whether that's the case here. 14 MR. KIERNAN: Well, he recalls it. 15 When dealing with an entire population, are 15 MS. SWEENEY: Yeah, but can you give the page 0. 16 there methods available to econometricians to account 16 cite? 17 for correlation of error terms when calculating standard 17 MR. KIERNAN: I don't have the page cite. 18 errors? 18 THE WITNESS: Is that from the second edition 19 Α. Well, like I said, there's no need to do it 19 of my book? 20 when you're using only the information from each record 20 BY MR. KIERNAN: 21 in your econometric analysis. 21 Q. Yes. 22 So the -- you know, the fact that you then 22 Α. Means that if you -- if you use -- if you use 23 decide that after you have this entire population that 23 cluster sampling and you choose only a relatively small 24 you're going to, essentially, arbitrarily define number of clusters with large cluster sizes, there's no 24 25 clusters and then conclude that based on your 25 theory that says that those cluster robust standard Page 99 Page 100 1 errors have any desirable properties. threshold is the point at which the number of clusters 1 2 Okay. And when you state, "We should not 2 is no longer a problem? 0. expect good properties of the cluster robust standards," 3 3 Α. This is a -- an impossible question to answer. what are the good properties that you're referring to? It is the question empirical people are most interested 4 4 5 A. You would want them to, essentially, be 5 in. So assuming that it's appropriate to cluster, it unbiased estimates or even consistent estimates of the depends on lots of different characteristics of the 6 6 7 actual sampling variances. 7 problem. For example, it depends on how big the cluster 8 sizes are. It depends on the distribution of the 8 Q. Right. So one would be unbiasness? 9 A. Yes. Well, that's -- so the sampling 9 observables and unobservables in the population. 10 variances, the -- the usual OLS estimators are unbiased 10 So this is something that theory can't easily 11 estimators of the -- the usual -- the usual variance answer and that's why people do simulations to try to 11 12 estimators for the OLS -- that's a -- the sampling 12 find when the -- the -- the theory of having a large 13 variances for the OLS estimators are unbiased and then 13 number of clusters seems to work fairly well. 14 we take the square roots of them to get the standard 14 Q. When you referred to "observables" in your 15 errors. And you can't always -- the -- the cluster 15 last answer, were you -- and "unobservables," what were 16 robust ones, they're never exactly unbiased, so you talk 16 you referring to? 17 17 about approximations and you often talk about what Α. The explanatory variables and -- as the observables and then the error term is the 18 happens as you get more and more data. 18 And the theory on cluster sampling does not 19 19 unobservables. allow for the case where you have a small number of And so that I understand your answer, it's 20 20 Q. 21 clusters and -- well, having a small number of clusters 21 that theory doesn't provide the answer and so there are 22 is a problem in general and certainly when you have a econometricians that are implying empirical analysis to 22 23 large number of observations per cluster none of the 23 try to answer that question? 24 theory applies to that case. 24 Α. Simulation studies, yes. 25 Is it simulation studies like what Hanson did 25 Q. And what number of clusters is -- what 0.

	Page 109		Page 110
1	and the quarter or the date of the transaction and so	1	Q. Yeah. Okay. Differ I have a different
2	on.	2	hypothetical.
3	BY MR. KIERNAN:	3	A. Okay.
4	Q. And with respect to the school example	4	Q. You pull all the students' information
5	A. Uh-huh.	5	first
6	Q if I got all the students within a state	6	A. Uh-huh.
7	A. Uh-huh.	7	Q and then from there you learn about you
8	Q and I got the big data file, wouldn't it be	8	learn from the dataset you have the entire population of
9	analogous to what you just described in that I would	9	students
10	learn of the school and the district from that same	10	A. Uh-huh.
11	dataset?	11	Q and then you learn from the dataset, the
12	MS. SWEENEY: Objection to form. Vague and	12	schools and districts and so forth. How is that
13	ambiguous. Incomplete.	13	different from what you describe on page 3?
14	THE WITNESS: Yes. And, in fact, that's why I	14	MS. SWEENEY: Objection. Vague and ambiguous.
15	included that example in my declaration is because once	15	Incomplete.
16	you've gathered the information on the students, the	16	THE WITNESS: As a practical matter I don't
17	fact that you also learned about their school and their	17	think it's different.
18	school district does not mean you should then group them	18	BY MR. KIERNAN:
19	into clusters based on their school or their district.	19	Q. Okay. How does one determine or strike
20	BY MR. KIERNAN:	20	that.
21	Q. But that example in your report just to	21	What methods does an econometrician apply to
22	make sure I understand it aren't you, what you're	22	determine if something is ex post clustering?
23	referring to right now, is when you randomly sample the	23	A. Oh, well, you have to know there are so
24	students at the first stage?	24	if you have a sample of data, then, of course, you know
25	A. Yes.	25	because after you've drawn the observations you can see
20		20	because arear for to arawn the observations for oan see
1	Page 111	1	Page 112
2	what you're clustering on. In the case of a whole	2	MS. SWEENEY: Objection. Asked and answered.
3	population you know because the clustering is essentially arbitrarily defined.	3	Vague and ambiguous. THE WITNESS: You have to have a population of
			clusters and then from that you know what the cluster
4	Q. Any other factors that one would consider if	4	structure is.
5	ex post factor clustering occurred when a whole population is being used? You named the clustering is	-	
6		6 7	BY MR. KIERNAN:
<b>7</b> 8	arbitrarily defined. Any other factors?	8	Q. And what what factors do you consider to
9	A. Well, in again, since the distinction between the population and the sample is really one of	9	determine whether you have a population of clusters?
			A. Well, it, again, depends on the population
10	number of observations here, if you can determine it	10	is of clusters is defined once you have determined
11	based on a random sampling thought experiment, then you	11	the sampling scheme. So in other words, if you're
12	can determine it in the population as well.	12	sampling schools, clusters of schools.
13	So, in other words, if I took a random sample	13	Q. On page 6 of your declaration let me know
14	of the transactions and then clustered on the basis of	14	when you get there.
15 16	family and quarter, then the same sort of clustering	15 16	A. Yes.
10	would be inappropriate with the entire population. Q. And what factors does an econometrician	10	Q. It's roughly a quarter of the way down, "Clustering is a property of how the data are collected
17	consider in determining whether the clustering was, in	17	and has nothing to do with how much variation there is
10	your words, essentially arbitrary?	10	in the underlying population variable or variables."
20	A. Well, because because the observations	20	A. Uh-huh.
20	don't have a cluster structure.	20	Q. Do you see that?
21	Q. And how do you determine that? How does	21	A. Uh-huh.
22	what are the factors that an econometrician considers to	22	Q. And what authority supports that statement?
23	determine whether, in your words, there is they do	24	A. Well, it's the I've given several
24	not have a cluster structure?	24	examples. It's the authority is basically that you
		25	champles. It 5 the authority is pastearry that you

	Page 113		Page 114
1	can't really anticipate every time somebody is going to	1	reviewed publications, that support your testimony that
2	get something wrong like this, so I tried to explain	2	that is generally accepted in the field of econometrics?
3	through examples that if you if you have a variable	3	A. I I'm sorry. Could you repeat that? That
4	that doesn't change very much in a population and you	4	sounded like the same question to me.
5	draw a random sample from it, that has how much	5	Q. Slightly different. And that is, can you cite
6	variation there is in the population has nothing to do	6	to any authority, including a peer-reviewed publication,
7	with whether you have to treat those observations as	7	that support your testimony that your statement on
8	being from a cluster sample.	8	page 6 is generally accepted in the field of
9	MR. KIERNAN: Okay. Move to strike as	9	econometrics?
10	nonresponsive.	10	A. Well, here's what I can do: I can point to
11	MS. SWEENEY: And I disagree with that	11	the literally thousands, if not tens of thousands, of
12	characterization.	12	papers published in empirical economics that never
13	BY MR. KIERNAN:	13	discusses whether the variation and the dependent
14	Q. For the statement, "Clustering is a property	14	variable has any bearing on whether to cluster or not.
15	of how the data are collected and has nothing to do with	15	So I would think it would show up somewhere if that were
16	how much variation there is in the underlying population	16	actually an issue.
17	variable or variables," stated on page 6 of Wooldridge	17	So many labor economists have done analyses
18	1, please cite for me authority that supports that	18	with all kinds of response variables, including, as I
19	proposition.	19	said, variables such as do you have a job or not, and
20	A. I can't give you a citation for that.	20	that has much less variation because it's a 01 variable
21	Q. And is it your testimony today that that	21	than if you look at their annual earnings. And the fact
22	statement is generally accepted in the field of	22	that one is much less variable than the other has
23	econometrics?	23	nothing to do with whether you should cluster the data.
24	A. Yes, I believe it would be.	24	Q. And it's your testimony that labor
25	Q. And can you cite to any authority, any peer-	25	econometricians, it's generally accepted, that they
	Page 115		Page 116
1	would not use clustering in the scenario that you just	1	A. Well, look, I follow empirical work and
2	described?	2	Q. Just name five.
3	A. If if you ran if you had a random	3	MS. SWEENEY: Objection.
4	sample, I certainly hope not. Again, you could only	4	MR. KIERNAN: Okay.
5	cluster if after you obtained your data you define some	5	MS. SWEENEY: Asked and answered.
6	clusters to to cluster on and that would lead to an	6	Argumentative.
7	increased bias in your standard errors.	7	BY MR. KIERNAN:
8	Q. Okay. Name for me the ones that you can	8	Q. Name one.
9	recall, as you sit here, the literally thousands, if not	9	MS. SWEENEY: Harassing the witness.
10	tens of thousands, of papers published empirical	10	Stop now.
11	economics that never discuss whether the variation in	11	THE WITNESS: Angrist Angrist and Krueger,
12	the underlying population variable or variables	12	their paper on estimating the effects of schooling on
13	A. Well, I certainly	13	wages.
14	Q is relevant with respect to clustering?	14	BY MR. KIERNAN:
15	MS. SWEENEY: Yeah, I'm going to object.	15	Q. Okay. Any others you can think of?
16	That's sort of a ridiculous question. He's not going to	16	A. Melon's paper on evaluating a job training
17	sit here and identify tens of thousands of articles for	17	program, an AER paper. The thing is that they don't
18	you.	18	discuss this issue because it doesn't come up.
19	BY MR. KIERNAN:	19	Q. What issue doesn't come up?
20	Q. Could you list, as you sit here today, tens of	20	A. The fact that there's how much variation
21	thousands of articles?	21	there is in their data, whether that leads to a
22	MS. SWEENEY: Objection. Improper	22	clustering problem or not.
23	THE WITNESS: As I sit here right now, no.	23	MR. KIERNAN: Let's take a short break.
24	BY MR. KIERNAN:	24	MS. SWEENEY: Are you almost done?
1 1			1
25	Q. Okay. Name name five for me.	25	THE VIDEOGRAPHER: Going off the record at

	Page 117		Page 118
1	2:43 p.m.	1	individual units are included in an analysis"?
2	(Recess.)	2	A. If you I mean, ideally you would know the
3	THE VIDEOGRAPHER: Okay. We're back on the	3	level of which the data were clustered, so that's
4	record at 3:04 p.m.	4	that's a case that's a conservative approach to the
5	BY MR. KIERNAN:	5	problem where you might not know how the data were
6	Q. Dr. Wooldridge, do you agree with the	6	generated.
7	statement, "It is probably a sensible rule to at least	7	Q. And so today do you stand by your statement in
8	consider the data as being generated as a cluster sample	8	your book?
9	whenever covariates at a level more aggregated in the	9	A. Actually, I would as I said, in light of
10	individual units are included in an analysis"?	10	these sort of new findings on clustering random samples,
11	A. That sounds like something I wrote.	11	I would actually want to revisit that to see whether
12	Q. And do you agree with it?	12	that's a a useful thing to do or not. And it has to
13	A. Actually, I would want to re-examine that	13	do with it's always going to have to do with the
14	statement in light of this sort of recent research that	14	number of clusters that you have and the number of
15	I've done. It certainly is when you have variables	15	observations per cluster.
16	that are defined at, like, a school district level and	16	Q. And what would you want to examine in
17	you have schools, you may or may not have to cluster.	17	analyzing or considering whether or not to revise the
18	But then when you do it or you don't do it, you can see	18	statement in your book that we've been discussing?
19	the answer, assuming that you have a large number of	19	A. Well, I would want to work out the theory for
20	clusters with relatively few units per cluster. But it	20	what happens when you assume the data are generated from
21	may be too it may be too conservative to do that.	21	a random sample, but you include covariates that are
22	Q. And, as you sit here today, do you stand by	22	defined at a higher level.
23	your statement that "It's a sensible rule to at least	23	Q. Anything else?
24	consider the data as being generated as a cluster sample	24	A. Simulation.
25	whenever covariates at a level more aggregated than the	25	Q. In Professor Noll's analysis of the iPod
23	whenever covariates at a rever more aggregated than the	23	ç. în rioressor norr s anarysis or the from
1	Page 119	1	Page 120 sure I have this clear.
1	transactional data, did he include covariates at a level	2	
<b>2</b> 3	<pre>more aggregated than the individual unit transactions?     A. Well, each each variable no, each</pre>	3	Did Professor Noll's analysis of iPod transactional data include covariates at a level more
		4	
4	transaction is defined by its characteristics.		aggregated in individual iPod transactions?
5	Q. Okay. So you're understanding is that	5	A. Not the way I would define them, no.
6	Professor Noll's analysis of the iPod transaction data,	6	Q. And when you say "define them," what is the
7	he did not include covariates at a level more aggregated	7	"them" referring to?
8	than the individual transactions? Is that your		
<b>9</b>	understanding?		
10	A. No. He included time effects and he included		
11	attributes of the products.		
12	Q. Okay. And is it your testimony that time		
13	effects		
14	A. Those are		
15	Q and attributes of products are covariates		
16	at a level more aggregated than the individual unit		
17	transactions?		
18	A. They're not more aggregated. An example would		
19	be to say that because some people have the same level	19	Q. Did you examine Professor Noll's analysis to
20	of education that that how is somehow a variable	20	determine whether he included covariates at a level more
21	that's aggregated that's defined at a more aggregated	21	aggravated than the individual units that are included
	level because you can put everybody into a class of	22	in the analysis?
22		23	A. Did I examine the regressions? I did look
22 23	education.		5
	education. Q. Okay. And either we're not communicating	24	Q. For that purpose.

	Page 121		Page 122
1	in the regression, yes.	1	that this is a copy of the section on Clustering
2	Q. Do you agree that in some cases you can define	2	Sampling, 20.3, from Chapter 20 of your textbook
3	the clusters to allow additional spacial correlation?	3	Econometric Analysis of Cross Section and Panel Data,
4	A. Spacial correlation? Well, spacial	4	Second Edition.
5	correlation has to do when you have is usually a	5	Do you recognize the section on Cluster
6	feature where you have large geographical units and you	6	Sampling?
7	don't have random sampling.	7	A. Yes, I do.
8	Q. So, for example, if you think of sampling	8	Q. Okay. And if you turn to page 864
9	fourth grade classrooms and you're concerned about	9	A. Okay.
10	correlation in student performance not just within the	10	Q and this is under Section 20.3.1
11	class, but also within the school, then you could define	11	A. Uh-huh. Okay.
12	the clusters to be the schools?	12	Q and in this section you're discussing an
13	A. Not if you take a random sample of fourth	13	example which a random sample fourth-grade classrooms is
14	graders from the population of fourth-grade classrooms.	14	drawn in the state and the common factor affecting
15	That would be an example of what I'm calling ex post	15	students in a given classroom is the characteristics of
16	clustering because you would then be, essentially,	16	the teacher.
17	looking at the school that the classroom came from and	17	A. Uh-huh.
18	making that your cluster when you already have a random	18	Q. Is that right?
19	sample of fourth-grade classrooms so you don't need to	19	A. I'm sorry. Where are you seeing that?
20	do anything further.	20	Q. In this section where you're using the sample
21	(Exhibit 2 marked.)	21	of fourth-grade classroom, my under
22	BY MR. KIERNAN:	22	MS. SWEENEY: Go ahead and take a second to
23	Q. Okay. Let me hand you what's been marked as	23	read it.
24	Wooldridge 2.	24	MR. KIERNAN: Yeah.
25	And I'll represent to you, Dr. Wooldridge,	25	THE WITNESS: Are you looking at the back?
	Page 123		Page 124
1	Where are you I'm sorry.	1	I would rewrite this section a bit if I if there's a
2	BY MR. KIERNAN:	2	third edition coming.
3	Q. I'm looking at Clustering Sampling.	3	Q. And did you make the same recommendation in
4	A. This page.	4	the first edition of your textbook, Econometric Analysis
5	Yeah, I might rethink that now.	5	of Cross Section Panel Data?
6	Q. Why is that? Well, rethink what?	6	A. Actually, that's I can't remember. It was
7	A. In other words, whether you actually have to	7	a fairly extensive revision of the book.
8	cluster at the school level	8	Q. And you state, "After examining these problems
9	Q. So in	9	with this ex post clustering," are you referring to in
10	A after doing	10	connection with this case?
11	Q your textbook oh, sorry.	11	A. No, just in general. Just the theory that
12	A. After doing more recent analysis, yes.	12	I've worked out and that, as I mentioned, my coauthors
13	Q. Okay. In your textbook you propose clustering	13	and I had been working on.
14	when calculating the	14	So, in other words, when you realize that if
15	A. So this is a conservative thing to do, yes.	15	you are randomly sampling any unit, whether it's an
16	That doesn't mean that if you have good reason not to do	16	individual student or a fourth-grade classroom, it's
17	it, that you that you should still do it.	17	actually it's certainly conservative to compute the
18	Q. Where do you state it's a conservative	18	cluster robust standard errors and it's not going to be
19	conservative thing to do and if you have a reason not to	19	very costly in a case like this if you don't have to
20	do it, you shouldn't do it? Where is that in your	20	because you have a large number of clusters with
21	textbook?	21	relatively small cluster sizes. But if you do it in the
22	A. Well, we as I mentioned, this is a learning	22	case where you don't where your cluster sizes are
23	process, right? So after examining these problems with	23	very large and so there's no theory to tell you that
24	this ex post clustering, I now know that it's a	24	those clusters standard errors are going to settle down
25	conservative thing to do. So, yes, I would probably	25	to the usual ones, then I would be more careful here and

	Page 125		Page 126
1	argue that you you shouldn't necessarily do it	1	A and some and some simulation results.
2	because your inference could be much too conservative.	2	Q. Have you completed the simulation result
3	Q. Okay.	3	work?
4	A. This is the the point of there's another	4	A. Simulation work is it's hard to decide
5	section in here on stratified sampling. And it's the	5	where to stop, but there's there's a fair amount of
6	same sort of argument that you can always do something	6	simulation work.
7	that's very conservative, but you may not learn much and	7	Q. Okay. Have you completed the empirical work
8	if you can do something else that is is actually	8	with respect to your theory on ex post clustering?
9	providing the proper standard errors, then you should do	9	A. So by "empirical" do you mean with an actual
10	that.	10	dataset or do you mean the simulations?
11	Q. And have you reached an ultimate conclusion of	11	Q. The simulations. I know this morning you were
12	whether to revise the paragraphs in your Chapter 20.3.1?	12	describing the simulations as the empirical work like
13	A. Yes. I probably I think I would revise	13	A. Oh.
14	them in light in fact, I would add a section on ex	14	Q what Hansen was doing.
15	post clustering.	15	A. Okay. So just to be clear, when economists
16	Q. And what what authorities or peer-reviewed	16	say "empirical work," they usually mean data that's been
17	papers would you cite in support of your new section in	17	collected from the real world
18	your textbook?	18	Q. Sure.
19	A. Well, a lot of this book is actually based on	19	A as opposed to generating. So if you mean
20	original research, so I probably wouldn't. If I finish	20	the simulations experiments, is it completed? Well, you
21	the work with my co-authors, then I would cite that.	21	can always you can always vary parameters and see how
22	Q. And, as of today, you have not completed that	22	things change when you vary parameters, but the
23	work?	23	simulations predict the theory quite well.
24	A. The theory is is essentially finished	24	Q. And have the simulations been peer reviewed?
25	Q. And	25	A. No.
	Page 127		Page 128
1	Q. If you turn to page 868, you have an example	1	aggregate level, but and you can see that the
2	20.3. Just tell me when you get there.	2	standard errors do go up, so it's a conservative thing
3	A. Yes.	3	to do.
4	Q. And this is Cluster Correlation in Teacher	4	Q. And in example 20.3, the the data was not
5	Compensation. Do you see that?	5	collected using cluster sampling; isn't that correct?
6	A. Uh-huh.	6	A. That's correct.
7	Q. And "The data set is in BENEFITS.RAW, includes	7	Q. You collected the entire population?
8	average compensation, at the school level, for teachers	8	A. Actually, it's not the entire population, no.
9	in Michigan."	9	It's it's a subset of the districts from the state of
10	Do you see that?	10	Michigan. It contains a lot of them, but not all of
11	A. Yes.	11	them.
12	Q. And do you understand that that data include	12	Q. How many did you exclude?
13	the entire population?	13	A. 500 and probably about
14	A. Yes.	14	Q. Does eight come to mind?
15	Q. Okay. And then in your textbook you state,	15	A. Eight? No, I think it's got to be more than
16	"We view this as a cluster sample of school districts,	16	that. I think there are currently 500 and 55 18 or
17	the schools within districts representing the individual	17	20 or something like that, yeah.
18	units"; is that accurate?	18	Q. Okay. So virtually all the school districts?
19	A. It's an example, yes.	19	A. It very close, yes. Where you have
20	Q. Okay. And this is an example of what you	20	yeah. So G equals 537 when these are elementary
21	described on page 864?	21	schools, I believe. So you have a large G with
22	A. Actually, this is yeah, this is just an	22	relatively few schools per so few observations per
23	example to, essentially, create a what could have	23	cluster.
24	been a cluster sample so that they can see what happens	24	Q. Now, are you familiar with
25	when you when you do cluster at a at a more	25	A. And this, by the way, actually fits with the

	Page 129		Page 130
1	theory that I that the standard errors would go up by	1	A. I should
2	a fair amount.	2	Q the authority
3	Q. And are you other than theory, are you	3	A. I should have put a citation in there. I'd
4	relying upon anything to support that the standard	4	probably have to go look that up. There's a paper by, I
5	errors would go up by a large amount? Any	5	think it's Mitchell Peterson. It's in a financial
6	A. The simulations.	6	journal. I'd have to go Journal of Financial, maybe
7	Q. Other than the ones that you that you've	7	it's Journal of Finance.
8	been working on recently, are there other simulations	8	Q. And what is a the conclusion or opinion set
9	that you're relying upon for that statement?	9	forth in that paper with respect to this issue?
10	A. I don't know of any simulations that ask the	10	A. That clustering can be effective for computing
11	question what would happen if you simulated if	11	standard errors when you have a large number of clusters
12	you clustered a random sample based on characteristics	12	and not too many units per cluster. That's actually a
13	that you draw along with the main variable, yes.	13	paper that the setting is a bit different because it's
14	Usually when when properties of the clustered	14	it's panel data, so there is a time dimension, and so
15	standard errors are evaluated via simulation, they are	15	they're considering the case of clustering both in the
16	actually cluster samples that have been drawn like in	16	cross-sectional dimension in some cases and the time
17	Chris Hansen's work, for example, or the DueFlow, et	17	series and others and then across both dimensions and
18	al., paper in the QJE.	18	others.
19	Q. You state in your report that clustered	19	I could probably I I'd have to think.
20	standard errors are not justified with, say, ten	20	I I mentioned this before, that there's no sort of
21	clusters and 200 observations per cluster.	21	absolute rule of thumb that you can use, but the theory
22	Do you recall that page 5 of your report?	22	certainly doesn't allow for that kind of configuration.
23	A. Uh-huh.	23	If you think that thinking of G heading off to infinity
24	Q. And I notice you don't have a citation there.	24	with the number of observations per cluster fixed is a
25	Can you cite to me	25	good thought experiment, it isn't because the the
	Page 131		Page 132
1	large sample theory that's obtained from letting G get		paper?
2	large is not going to be very relevant for that	2	A. I thought I looked at them, yes.
3	particular structure.	3	Q. Okay. And is it your testimony that Chris
4	Q. So are you relying upon Hansen's paper for the	4	Hansen stated that the higher the ratio of observations
5	statement that clustered standard errors are not	5	per cluster to number of clusters the more poorly
6 7	justified with ten clusters in 200 observations? A. He considers a similar configuration. I don't	7	clustered standard errors
8	know if it's exactly that configuration. In fact, he	8	A. I'm not sure he said that, no.
		-	Q. Is it your testimony that his paper supports
9 10	may have fewer observations per cluster and shows that	<b>9</b> 10	that conclusion in your report? A. I'm not sure it supports that statement. He
	they don't work as the theory as as the large	10	
11 12	cluster theory says they should. Q. When was the last time you reviewed Hansen's	12	does he does show that the performance deteriorates as for a fixed number of clusters you get more
12	Q. When was the last time you reviewed Hansen's paper, 2007 paper?	12	observations per cluster, yes.
14	A. Ah, it has been a little while. Well,	14	Q. What deteriorates?
14	actually, no. I I just looked at it the other day,	15	A. The
16	but now I can't remember what the yes. So I'd have	16	Q. Performance of what? Oh, sorry.
17	to qo back and look at that more carefully.	17	A. Sorry. The performance of the standard
18	Q. Did you review it before submitting this	18	errors.
1 10	2. DIG YOU TOATCH IT DELOTE SUMMITCITUR CUIPS	19	Q. Under what under what calculation? So you
10	report? In connection with drafting this report did		-
19 20	report? In connection with drafting this report, did		recall Hansen does OLS clustered and random Under
20	you review it?	20	recall Hansen does OLS clustered and random. Under which does it perform more poorly as you increase the

<b>20</b> 21 22	<pre>you review it?     A. I reviewed I I reviewed the lecture notes that I've written that refer to his report, his</pre>	20 21 22	which does it perform more poorly as you increase the number of observations

	Page 133		Page 134
1	Q number of clusters constant?	1	examiner, again, talked over him.
2	A. All that's relevant for this is the OLS versus	2	Do you want to repeat what you had said
3	clustering.	3	before, before David interrupted you, if you can
4	Q. Right.	4	remember it.
5	A. Right. And clustering well, no, but, see,	5	THE WITNESS: Oh, the I I think it was
6	in the in the OLS case, there if you're talking	6	about talking about three different versions of the
7	about computing the usual standard errors, he has built	7	standard errors, did you say, OLS, clustered, and you
8	cluster correlation into his simulations that was my	8	said something about random
9	comment earlier whereas my simulation said, suppose	9	BY MR. KIERNAN:
10	we take a random sample and then we do clustering, he's	10	Q. Random effects.
11	built that into his analysis so that there is cluster	11	A random effects. So, yeah, that the
12	correlation. And so neither of them works very well	12	issue here is the OLS versus the clustered standard
13	when you have a small number of clusters and many	13	errors and the OLS does poorly, but that's because
14	observations per cluster.	14	cluster correlation has been built into the simulation.
15	Q. Your testimony is that's what Chris Hansen	15	Again, it's a it's a different situation
16	states in his paper	16	because he's dealing with panel data and so the cluster
17	A. That's what	17	correlation is actually what we call serial correlation
18	Q that as you increase that as you	18	in the errors across time.
19	increase the number of observations per cluster, keeping	19	Q. Now, Dr. Wooldridge, you cite to Hansen
20	cluster the number of clusters constant that OLS	20	Hansen's paper as supporting your opinions in this case;
21	performs more poorly and so does the clustered standard	21	right?
22	errors?	22	A. Yeah. Uh-huh. Yes.
23	A. Yes.	23	Q. Okay. Even though he's using panel data?
24	MS. SWEENEY: And I I don't think the court	24	A. Yes, because the panel data the panel data
25	reporter caught the witness's first answer because the	25	introduces correlation in the cluster. It introduces it
	Page 135		Page 136
1	of a specific form, but it still has the same effect	1	of clusters?
2	that it induces correlation within a unit in the	2	A. Yes.
3	cluster.	3	Q. And T represents number of observations per
4	MR. KIERNAN: Let's just do this.	4	cluster?
5	I will hand you what is Exhibit 3. Is that	5	A. Yes.
6	right?	6	Q. Okay. And then column four, that's the target
7	(Exhibit 3 marked.)	7	standard error?
8	BY MR. KIERNAN:	8	A. Yes.
9	Q. Can you identify Exhibit 3?	9	Q. Okay. And then the difference between two and
10	A. Yes.	10	four columns two and four is how well the estimator
11	Q. And what is this?	11	is computing the standard errors?
12	A. This is the this is Chris Hansen's 2007	12	A. Yes.
13	paper on clustering.	13	Q. And, therefore, the difference shows you the
14	Q. And is this the paper that you're relying upon	14	bias of the estimated standard errors?
15	in your declaration, Wooldridge 1?	15	A. Yes.
16	A. Somewhat, yes.	16	Q. Okay. And if we look down at row where it
17	Q. Okay. And if you turn to pages 612 to 615	17	says B. Random Effects
18	A. Uh-huh.	18	A. Right.
19	Q you'll see the simulations that you've been	19	Q and let's consider the case where the
20	discussing.	20	intergroup correlation is high, so it's 0.9.
21	A. Uh-huh.	21	A. Okay. Uh-huh.
22	Q. And if pardon me.	22	Q. Okay. And if we look at OLS compare OLS to
23	Okay. I just want to walk through this. So	23	clustering, which performs better?
24	if I look down at table one, N equals 10 and T equals	24	A. The clustering
25	10, is it your understanding that N represents a number	25	MS. SWEENEY: Objection. Vague and ambiguous.
	-		

	Page 137		Page 138
1	I'm sorry. Go ahead.	1	clusters constant, OLS performs even worse; isn't that
2	BY MR. KIERNAN:	2	correct?
3	Q. Go ahead, Dr. Wooldridge.	3	A. The OLS standard error performs worse,
4	A. The clustering performs better because the	4	correct.
5	cluster effect is left in the error term for OLS, so	5	Q. Okay. And how about the cluster standard
6	this is data that had been generated with a cluster	6	errors?
7	affect.	7	A. It they're performing a little better.
8	Q. And then in table two Chris Hansen keeps the	8	Q. Okay.
9	number of clusters constant at ten; correct?	9	A. And that's but in this data-generating
10	A. Uh-huh.	10	mechanism, the cluster is of a form where it's serial
11	0. And he increases the observations to 50	11	correlation that's dying out over time, not a not
12	observations per cluster; correct?	12	what you would get if you were using randomly sampled
13	A. Yes.	13	data and then clustering after you've randomly sampled.
14	MS. SWEENEY: I'm sorry. Where are you?	14	Q. And then if you turn to page, look at Table
15	MR. KIERNAN: I'm on table two.	15	three, now Dr. Hansen increases the number of clusters
16	MS. SWEENEY: Any particular place in table	16	or group, from ten to 50.
17	two?	17	A. $Uh-huh$ .
18	MR. KIERNAN: No.	18	Q. But uses ten observations per cluster. Do you
19	MS. SWEENEY: No? Okay. Sorry.	19	see that?
20	MR. KIERNAN: That's all right.	20	A. Yes.
21	BY MR. KIERNAN:	21	0. And then using the same case where the
22	Q. Okay. And in looking at the same case where	22	intergroup correlation is at 0.9
23	the intergroup correlation is high, so it's 0.9 under	23	A. Uh-huh.
24	Random Effects, here this shows that when the number of	24	Q which performs better, the OLS or the
25	observations per cluster increase, keeping the number of	25	cluster?
1	A. The cluster.	1	Page 140 MS. SWEENEY: Okay. Thank you.
2	Q. And then in table four, Dr. Hansen runs a	2	
3		3	MR. KIERNAN: entire rebuttal at your
	simulation again, keeping the number of clusters constant at 50, but doubles the number of observations	4	request.
4	per cluster.	5	MS. SWEENEY: Okay.
6	•	6	(Exhibit 4 marked.) BY MR. KIERNAN:
7	Do you see that? A. Yes.		
8		7	Q. And you can take a moment to see that
-	Q. And what impact does that have on the	8	Exhibit 4 is the Dr. Noll's reseller and direct
9	performance on the OLS estimator?	9	consumer regressions, the reports in Exhibit 3 of his
10	A. It deteriorates.	10	rebuttal report.
11	Q. And what impact does that have on the cluster	11	Do you see that?
12	robust estimator?	12	A. Yes.
13	A. So in this case it gets a little better.	13	Q. And, roughly, how many variables does Dr. Noll
14	Q. Roughly do you recall roughly how many	14	include in his regressions?
15	variables Dr. Noll had in his regressions?	15	A. Let's look. It's more like 100, roughly.
16	A. Well, it's two two pages' worth. So I	16	MS. SWEENEY: Do you want him to count them on
17	don't know. Maybe maybe it's more than two pages'	17	this page?
18	worth. Must be 50 or 60, something like that.	18	THE WITNESS: Eighty, something like that.
19	MR. KIERNAN: Okay. I'm going to hand you	19	BY MR. KIERNAN:
20	what is his rebuttal report. Okay? I'm going to mark	20	Q. Okay.
21	this as Exhibit Wooldridge 4.	21	A. Yeah.
22	MS. SWEENEY: So which one are you marking as	22	Q. And then just a second. I lost my copy.
23	4? Just the	23	MR. KIERNAN: Oh, there it is. Thank you.
24	MR. KIERNAN: Just the yeah, these, but	24	BY MR. KIERNAN:
25	I've provided the	25	Q. And you'll notice that the vast majority are
1		1	

1	Page 141		Page 142
1	statistically significant at the one percent level.	1	looking at 3A 3B's the direct sales regression
2	A. Yes.	2	A. Uh-huh.
3	Q. Okay. Is it is it unusual to find this	3	Q and if you look at the regression output,
4	level of significant over so many variables in a	4	Dr. Noll reports that every single coefficient is
5	regression?	5	statistically significant at the one percent level.
6	MS. SWEENEY: Objection. Overbroad. Vague	6	Do you see that?
7	and ambiguous.	7	A. Yes.
8	THE WITNESS: It's unusual to have 2 million	8	Q. Do you find it unusual or is it unusual that a
9	observations.	9	regression with this many variables could or strike
10	BY MR. KIERNAN:	10	that.
11	Q. And not my question.	11	If you have a regression with close to 80
12	A. And to have and to have so so is it	12	variables, could it all be considered near perfect
13	unusual? The often we don't have good explanatory	13	variables for explaining iPod prices?
14	variables for micro-type outcomes. So if this were a	14	MS. SWEENEY: Objection. Vague and ambiguous.
15	wage equation and we only had, you know, a dozen	15	THE WITNESS: Yes. I'm not sure what you mean
16	characteristics of people to explain their wage, then I	16	by "near perfect." If you mean that statistically
17	would expect much more residual variance. But if we had	17	significant at a low significance level, then, again,
18	two million observations, we can still get quite small	18	I'm not surprised with this very large sample size.
19	standard errors and statistical significance.	19	This is the difference between so without
20	I mentioned some work earlier by Angrist and	20	commenting on the coefficients, the difference between
21	Krueger and Angrist has also done work with Bill Evans,	21	practical significance and statistical significance. If
22	using five percent census data and, yeah, you you get	22	you have even if you have really small coefficients
23	small standard errors when you have large datasets like	23	with enough data you can drive the standard error to be
24	that.	24	close to zero and so, no, it's not surprising to me.
25	Q. And if you look at Exhibit 3B so we were	25	BY MR. KIERNAN:
1	Page 143	1	Page 144
1	Q. Okay. And if you look at if you look at	1 2	Q. And if the T statistic strike that.
3	Exhibit 3B and let's take the harmony2 variable, do you know what that refers to?	3	<ul> <li>A. These are much bigger than that.</li> <li>Q. I know.</li> </ul>
4	A. I believe there was a second version of the	4	A. But that's, again, with 36, 37 million
5	harmony software and that's what that indicates.	5	observations, it's rare that one has a dataset with that
6	Q. Okay.	6	
7	g. onaj.		many observations. And as I said it's it's also
1 '	A. It's a 01 variable indicating when harmony?		many observations. And, as I said, it's it's also
8	A. It's a 01 variable indicating when harmony2 was released. I believe.	7	because these are such good predictors of price you have
8 9	was released, I believe.	7 8	because these are such good predictors of price you have little residual variance to explain.
8 9 10	was released, I believe. Q. And what would be the T statistic on the	7	because these are such good predictors of price you have little residual variance to explain. Q. And how do you know that they are such good
9	was released, I believe.	7 8 <b>9</b>	because these are such good predictors of price you have little residual variance to explain.

And how do you know that they are such good predictors of price? What are you basing that statement on? A. The R-squared. Q. Anything else? A. No, because you could have statistical</pre>
<ul> <li>9</li> <li>10</li> <li>11</li> <li>12</li> <li>13</li> <li>14</li> <li>15</li> </ul>	<pre>was released, I believe. Q. And what would be the T statistic on the harmony2 variable in the regression represented in 3 here? A. You're asking me to do calculations that I'm not very good at, so maybe you have done it for me. Q. How would you calculate the A. Oh, I would</pre>	7 8 9 10 11 12 13 14 15	<pre>because these are such good predictors of price you have little residual variance to explain. Q. And how do you know that they are such good predictors of price? What are you basing that statement on? A. The R-squared. Q. Anything else? A. No, because you could have statistical significance even at a very high level and not have</pre>
<ul> <li>9</li> <li>10</li> <li>11</li> <li>12</li> <li>13</li> <li>14</li> <li>15</li> <li>16</li> </ul>	<pre>was released, I believe. Q. And what would be the T statistic on the harmony2 variable in the regression represented in 3 here? A. You're asking me to do calculations that I'm not very good at, so maybe you have done it for me. Q. How would you calculate the A. Oh, I would Q T statistic?</pre>	7 8 9 10 11 12 13 14 15 16	<pre>because these are such good predictors of price you have little residual variance to explain. Q. And how do you know that they are such good predictors of price? What are you basing that statement on? A. The R-squared. Q. Anything else? A. No, because you could have statistical significance even at a very high level and not have necessarily a high adjusted R-squared. There's nothing</pre>
<ul> <li>9</li> <li>10</li> <li>11</li> <li>12</li> <li>13</li> <li>14</li> <li>15</li> <li>16</li> <li>17</li> </ul>	<pre>was released, I believe.     Q. And what would be the T statistic on the harmony2 variable in the regression represented in 3 here?     A. You're asking me to do calculations that I'm not very good at, so maybe you have done it for me.     Q. How would you calculate the     A. Oh, I would     Q T statistic?     A. Yeah, I would take the coefficient estimate</pre>	7 8 9 10 11 12 13 14 15 16 17	<pre>because these are such good predictors of price you have little residual variance to explain. Q. And how do you know that they are such good predictors of price? What are you basing that statement on? A. The R-squared. Q. Anything else? A. No, because you could have statistical significance even at a very high level and not have necessarily a high adjusted R-squared. There's nothing that says there has to be any particular relationship</pre>
<ul> <li>9</li> <li>10</li> <li>11</li> <li>12</li> <li>13</li> <li>14</li> <li>15</li> <li>16</li> <li>17</li> <li>18</li> </ul>	<pre>was released, I believe. Q. And what would be the T statistic on the harmony2 variable in the regression represented in 3 here? A. You're asking me to do calculations that I'm not very good at, so maybe you have done it for me. Q. How would you calculate the A. Oh, I would you calculate the A. Oh, I would Q T statistic? A. Yeah, I would take the coefficient estimate and divide by the standard error. Actually, I would get</pre>	7 8 9 10 11 12 13 14 15 16 17 18	<pre>because these are such good predictors of price you have little residual variance to explain. Q. And how do you know that they are such good predictors of price? What are you basing that statement on? A. The R-squared. Q. Anything else? A. No, because you could have statistical significance even at a very high level and not have necessarily a high adjusted R-squared. There's nothing that says there has to be any particular relationship between those.</pre>
<ul> <li>9</li> <li>10</li> <li>11</li> <li>12</li> <li>13</li> <li>14</li> <li>15</li> <li>16</li> <li>17</li> <li>18</li> <li>19</li> </ul>	<pre>was released, I believe. Q. And what would be the T statistic on the harmony2 variable in the regression represented in 3 here? A. You're asking me to do calculations that I'm not very good at, so maybe you have done it for me. Q. How would you calculate the A. Oh, I would que calculate the Q T statistic? A. Yeah, I would take the coefficient estimate and divide by the standard error. Actually, I would get it from the Stata output probably because that would</pre>	7 8 9 10 11 12 13 14 15 16 17 18 19	<pre>because these are such good predictors of price you have little residual variance to explain. Q. And how do you know that they are such good predictors of price? What are you basing that statement on? A. The R-squared. Q. Anything else? A. No, because you could have statistical significance even at a very high level and not have necessarily a high adjusted R-squared. There's nothing that says there has to be any particular relationship between those. As I mentioned in the Angrist and Krueger</pre>
<ul> <li>9</li> <li>10</li> <li>11</li> <li>12</li> <li>13</li> <li>14</li> <li>15</li> <li>16</li> <li>17</li> <li>18</li> <li>19</li> <li>20</li> </ul>	<pre>was released, I believe. Q. And what would be the T statistic on the harmony2 variable in the regression represented in 3 here? A. You're asking me to do calculations that I'm not very good at, so maybe you have done it for me. Q. How would you calculate the A. Oh, I would you calculate the A. Oh, I would Q T statistic? A. Yeah, I would take the coefficient estimate and divide by the standard error. Actually, I would get it from the Stata output probably because that would be yes.</pre>	7 8 9 10 11 12 13 14 15 16 17 18 19 20	<pre>because these are such good predictors of price you have little residual variance to explain. Q. And how do you know that they are such good predictors of price? What are you basing that statement on? A. The R-squared. Q. Anything else? A. No, because you could have statistical significance even at a very high level and not have necessarily a high adjusted R-squared. There's nothing that says there has to be any particular relationship between those.</pre>
<ul> <li>9</li> <li>10</li> <li>11</li> <li>12</li> <li>13</li> <li>14</li> <li>15</li> <li>16</li> <li>17</li> <li>18</li> <li>19</li> <li>20</li> <li>21</li> </ul>	<pre>was released, I believe. Q. And what would be the T statistic on the harmony2 variable in the regression represented in 3 here? A. You're asking me to do calculations that I'm not very good at, so maybe you have done it for me. Q. How would you calculate the A. Oh, I would you calculate the Q T statistic? A. Yeah, I would take the coefficient estimate and divide by the standard error. Actually, I would get it from the Stata output probably because that would be yes. Q. And if you had a T statistic, let's say, 25,</pre>	7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	<pre>because these are such good predictors of price you have little residual variance to explain. Q. And how do you know that they are such good predictors of price? What are you basing that statement on? A. The R-squared. Q. Anything else? A. No, because you could have statistical significance even at a very high level and not have necessarily a high adjusted R-squared. There's nothing that says there has to be any particular relationship between those. As I mentioned in the Angrist and Krueger work, they have a fair amount of residual variance left over, but because they're using the 5 percent census,</pre>
<ul> <li>9</li> <li>10</li> <li>11</li> <li>12</li> <li>13</li> <li>14</li> <li>15</li> <li>16</li> <li>17</li> <li>18</li> <li>19</li> <li>20</li> <li>21</li> <li>22</li> </ul>	<pre>was released, I believe. Q. And what would be the T statistic on the harmony2 variable in the regression represented in 3 here? A. You're asking me to do calculations that I'm not very good at, so maybe you have done it for me. Q. How would you calculate the A. Oh, I would you calculate the Q T statistic? A. Yeah, I would take the coefficient estimate and divide by the standard error. Actually, I would get it from the Stata output probably because that would be yes. Q. And if you had a T statistic, let's say, 25, what would that tell you? How would you interpret that,</pre>	7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	<pre>because these are such good predictors of price you have little residual variance to explain. Q. And how do you know that they are such good predictors of price? What are you basing that statement on? A. The R-squared. Q. Anything else? A. No, because you could have statistical significance even at a very high level and not have necessarily a high adjusted R-squared. There's nothing that says there has to be any particular relationship between those. As I mentioned in the Angrist and Krueger work, they have a fair amount of residual variance left over, but because they're using the 5 percent census, they still get large T statistics.</pre>
<ul> <li>9</li> <li>10</li> <li>11</li> <li>12</li> <li>13</li> <li>14</li> <li>15</li> <li>16</li> <li>17</li> <li>18</li> <li>19</li> <li>20</li> <li>21</li> <li>22</li> <li>23</li> </ul>	<pre>was released, I believe. Q. And what would be the T statistic on the harmony2 variable in the regression represented in 3 here? A. You're asking me to do calculations that I'm not very good at, so maybe you have done it for me. Q. How would you calculate the A. Oh, I would que calculate the A. Oh, I would Q T statistic? A. Yeah, I would take the coefficient estimate and divide by the standard error. Actually, I would get it from the Stata output probably because that would be yes. Q. And if you had a T statistic, let's say, 25, what would that tell you? How would you interpret that, a T statistic of 25?</pre>	7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	<pre>because these are such good predictors of price you have little residual variance to explain. Q. And how do you know that they are such good predictors of price? What are you basing that statement on? A. The R-squared. Q. Anything else? A. No, because you could have statistical significance even at a very high level and not have necessarily a high adjusted R-squared. There's nothing that says there has to be any particular relationship between those. As I mentioned in the Angrist and Krueger work, they have a fair amount of residual variance left over, but because they're using the 5 percent census, they still get large T statistics. (Exhibit 5 marked.)</pre>

1	Page 145 Wooldridge 5. Can you identify Wooldridge 5 for me?	1	Page 146 A. Well, I would have to go back and look at the
2	A. This is a set of lecture notes for the basis	2	papers that I've read that have done simulations on
3	of a set of lectures that Guido Imbens and I gave at the	3	this. They don't this is a general statement. So
4	National Bureau of Economic Research in the summer of	4	you could you could find in other words, general
5	2007.	5	patterns. You could find specific simulations for given
6	(Exhibit 6 marked.)	6	number of clusters and observations. This might not be
7	BY MR. KIERNAN:	7	true, but it's generally it's a general statement
8	Q. Okay. I will hand you what's been marked as	8	about the patterns you would observe across lots of
9	Wooldridge 6.	9	simulations as you get more and more observations per
10	Can you identify Wooldridge 6 for the record?	10	cluster.
11	A. This is also a set of lecture notes. This	11	Q. And, as you sit here today, can you identify
12	I should have said, the first set is on estimating	12	any work that supports that statement?
13	average treatment effects under unconfoundedness and	13	A. Well, I as I any any published work?
14	these are lecture notes on linear panel data models for	14	No. I've done my own simulations that that show the
15	the series of lectures.	15	standard errors become are are conservative when
16	Q. In your report on page 5, if you look at the	16	you when you get well, with with a fixed and
17	second full paragraph	17	relatively small number of clusters, yes. In in the
18	A. Uh-huh.	18	cases I have looked at very conservative, but that's
19	0 about two-thirds of the way down you state,	19	a that's an issue of inappropriate clustering.
20	"The higher is the ratio" "The higher the ratio of	20	There's a separate issue of how would the clustered
21	observations per cluster to number of clusters, the more	21	standard errors behave if if you had a cluster sample
22	poorly clustered standard errors behave."	22	where you just had a small number of clusters with many
23	Do you see that?	23	observations per cluster.
24	A. Yes.	24	Q. And you state, "The higher is the rate "The
25	Q. What support do you have for that statement?	25	higher is the ratio," that should read, "The higher the
	Page 147		
1	-	1	Page 148
1	ratio."	1	problem
2	ratio." And at what point at what ratio does the	2	problem A. Uh-huh.
2 3	ratio." And at what point at what ratio does the clustered standard errors start performing more poorly?	2 3	problem A. Uh-huh. Q but you haven't reached an opinion on that?
2 3 4	ratio." And at what point at what ratio does the clustered standard errors start performing more poorly? A. You can't this is a question you can't	2 3 4	<pre>problem A. Uh-huh. Q but you haven't reached an opinion on that? A. That's that's correct.</pre>
2 3 4 5	ratio." And at what point at what ratio does the clustered standard errors start performing more poorly? A. You can't this is a question you can't really know because it depends so much on the specifics	2 3 4 5	<pre>problem A. Uh-huh. Q but you haven't reached an opinion on that? A. That's that's correct. MR. KIERNAN: Let's go off the record, give me</pre>
<b>2</b> <b>3</b> 4 5 6	ratio." And at what point at what ratio does the clustered standard errors start performing more poorly? A. You can't this is a question you can't really know because it depends so much on the specifics of the simulation. So it would depend whether it's a	2 3 4	<pre>problem A. Uh-huh. 1	THE WITNESS: No.	1	due to common factors accounting for clustering due
2	BY MR. KIERNAN:	2	to common factors is never appropriate?
3	Q. Okay. And are you aware or do you have any	3	MS. SWEENEY: Objection. Vague and ambiguous
4	understanding of the datasets that are used by	4	and compound. Overbroad.
5	econometricians in antitrust cases involving price	5	THE WITNESS: Again, the way I think about
6	fixing?	6	this is if you had a large population of data, then you
7	MS. SWEENEY: Objection. Compound.	7	could randomly sample and still have a large number of
8	Overbroad. Foundation.	8	observations.
9	MR. KIERNAN: Didn't like that one.	9	The original the usual calculation of the
10	THE WITNESS: No, I'm not I'm familiar with	10	standard errors without clustering would be appropriate
11	the dataset that Professor Noll analyzed, at least the	11	and as you get more and more data you will find that the
12	description of it.	12	standard errors shrink to zero. And that's what I think
13	BY MR. KIERNAN:	13	the appropriate thing that the appropriate finding
14	Q. In antitrust cases involving where there's	14	is.
15	allegations by plaintiffs that some conduct impacted	15	BY MR. KIERNAN:
16	price, is it unusual for the econometricians in such	16	Q. Have you have you reviewed any text,
17	cases to have the entire population of data?	17	publications on guidelines or recommendations for
18	MS. SWEENEY: Objection. Foundation.	18	proving damages in an antitrust case?
19	Compound. Overbroad. Vague and ambiguous.	19	A. I was sent Chapter 6 of the book Proving
20	THE WITNESS: I I don't know.	20	Antitrust Damages
21	BY MR. KIERNAN:	21	Q. And do you
22	Q. Is it your opinion that in antitrust cases	22	A by the American Bar Association.
23	where the parties are attempting to estimate the impact	23	Q. And do you recall the recommendation in that
24	of the challenge conduct on pricing when they're using	24	text on whether to account for a clustering due to
25	the entire population of transactions that clustering	25	common factors?
	Page 159		Page 160
1	A. Yes. It recommended clustering, but that's in	1	because you could if you wanted to take a large random
2	the context where or it should there should have	2	sample and then you would know that this clustering ex
3	been qualifications that the clustering should be done	3	post, as I've called it, is the inappropriate thing to
4	when it's actually appropriate. The clustering, based	4	do.
5	on essentially an arbitrary, you know, partitioning of	5	MR. KIERNAN: I'm not going to take two more
6	the data after you've looked at it is not appropriate.	6	minutes.
7	So there should have been a qualifier in there, I	7	Mark the transcript attorneys' eyes only per
8	believe.	8	the protective order.
9	Q. So you disagree with the proposal in the ABA	9	Last chance. Not going to ask anything?
10	guidelines?	10	That's all I have.
11 12	A. I think it's overly broad, yes. It doesn't discuss the issue at all of taking a random sample and	11	MS. SWEENEY: We don't have anything. THE VIDEOGRAPHER: Stipulations.
12	then clustering on some characteristics.	12	THE VIDEOGRAPHER: Stipulations. THE REPORTER: Handling of the original? Who
13	Q. And is one possible reason for that is because	13	will handle the original transcript?
14	in most antitrust cases parties are dealing with the	14	MS. SWEENEY: What have we been doing?
16	entire population of transactions, the prices from the	16	THE REPORTER: Do you want to go off the
17	defendants?	17	record?
18	A. I don't believe so.	18	MR. KIERNAN: Yeah, yeah.
19	MS. SWEENEY: Objection.	19	MS. SWEENEY: Yeah, let's go off the record.
20	THE WITNESS: I'm sorry.	20	MR. KIERNAN: Yeah. Let's go off the record
21	MS. SWEENEY: Foundation. Vague and	21	because he doesn't need to hear this.
22	ambiguous.	22	THE VIDEOGRAPHER: Okay. This concludes the
23	Sorry.	23	video portion of the deposition. Two DVDs were made.
24	THE WITNESS: I don't believe so, no. For the	24	We're going off the record at 4:26 p.m.
25	same reason that I have talked about over and over again	25	(Deposition concluded at 4:26 p.m.)
