Hi Charles,

1. After talking with Jim, we think it's probably better to release this after the tech teams have everything up and running in early-mid April. That way, when Agents check-it-out, they may sign up.
2. I've changed the About Homes.com section, a couple of other small items as well as my quote.
3. Please let me know if this attachment is acceptable.
4. Please email me a day or 2 prior to the release with a copy of the release.

Russell - if you open Netscape (version 4.x I'm assuming???) and type in <http://homes.listing-plus.com>, what happens?

I'm having a weird problem with the listings plus demo.
On IE, the LP link below redirects to

[http://www.listing-plus.com/lp/?clientid=7181&streetaddress=1228+Cedars+Cour
&city=Charlottesville&state=VA&zip=22903](http://www.listing-plus.com/lp/?clientid=7181&streetaddress=1228+Cedars+Cour&city=Charlottesville&state=VA&zip=22903)

On Netscape, I am encountering a problem that may be due to a bad domain reference. I end up redirecting into our own site from the listings plus link below, although the link above does work if I use it directly. Our DNS server is set up to return our IP when given a domain it can't find. In the past, trying to link "<SCRIPT SRC=" tags to invalid servers has produced this sort of behavior. I wonder if there might be a related problem in whatever is returned from the LP link below...

For now, I'll be linking directly to the link above.

That's good to know, all the examples showed street, city, state, zip... will it fall back to zip for these if the address isn't valid?

Let's keep going on this one!

I see little more to do on the consumer pages... just change to accommodate street without zip and build graphics for the links... I still need to build our customer service folks a tool to turn these features on and off.

I would like to discuss our import of limited school data pretty soon. Perhaps sometime Thursday or Friday?

I've worked some more on presenting Monster products within one of our hosted sites.

The property link I gave before

<http://agentdev.homes.com/content/listdetail.html/5529660>

now displays three links where the "Listing Plus" logo was before.

"Area Information Overview" links to Listings Plus.

"Community Details" and "School Details" deep-link into Channels, at the school or community search by this property.

For comparison, I have left our old "School Report" option in the dropdown just below these links. That is a link to our old school report for this property.

On this same site (agentdev.homes.com), on any page, there is a link at the top of the page to "Monster local info". This is a top level link into Channels. For comparison, the "Homes.com School Info" link is a top-level link into our old school info search.

Any other listing on this site will also have the LP & Channels links (unless it is missing a zip code) but as most of the listings are in the fictional location of "Your Hometown, FL, 33333", they will display error messages...

This gives a basic overview into how these products will work with our hosted sites. We still need to work out the details of importing a subset of Monster's school data so that we can continue to provide a functional equivalent to our old school search.

We might want to use a version of the LP button with a transparent background, do you have one or if not, may we create one?

they will accept street addresses with city and state without a zip code if it is a valid street address

That's good to know, all the examples showed street, city, state, zip... will it fall back to zip for these if the address isn't valid?

Let's keep going on this one!

I see little more to do on the consumer pages... just change to accommodate street without zip and build graphics for the links... I still need to build our customer service folks a tool to turn these features on and off.

I would like to discuss our import of limited school data pretty soon. Perhaps sometime Thursday or Friday?

Thanks,
Russell

I've worked some more on presenting Monster products within one of our hosted sites.

The property link I gave before

<http://agentdev.homes.com/content/listdetail.html/5529660>

now displays three links where the "Listing Plus" logo was before.

"Area Information Overview" links to Listings Plus.

"Community Details" and "School Details" deep-link into Channels, at the school or community search by this property.

For comparison, I have left our old "School Report" option in the dropdown just below these links. That is a link to our old school report for this property.

On this same site (agentdev.homes.com), on any page, there is a link at the top of the page to "Monster local info". This is a top level link into Channels. For comparison, the "Homes.com School Info" link is a top-level link into our old school info search.

Any other listing on this site will also have the LP & Channels links (unless it is missing a zip code) but as most of the listings are in the fictional location of "Your Hometown, FL, 33333", they will display error messages...

This gives a basic overview into how these products will work with our hosted sites. We still need to work out the details of importing a subset of Monster's school data so that we can continue to provide a functional equivalent to our old school search.

We might want to use a version of the LP button with a transparent background, do you have one or if not, may we create one?

I'm having a weird problem with the listings plus demo.

On IE, the LP link below redirects to

<http://www.listing-plus.com/lp/?clientid=7181&streetaddress=1228+Cedars+Court&city=Charlottesville&state=VA&zip=22903>

On Netscape, I am encountering a problem that may be due to a bad domain reference. I end up redirecting into our own site from the listings plus link below, although the link above does work if I use it directly. Our DNS server is set up to return our IP when given a domain it can't find. In the past, trying to link "<SCRIPT SRC=" tags to invalid servers has produced this sort of behavior. I wonder if there might be a related problem in whatever is returned from the LP link below...

For now, I'll be linking directly to the link above.

on your menu. Some other customization options will appear there soon as

well, so you can modify your color schemes and logo.

Here are links you can use to access your Channel Reports and Listing-Plus:

Mark, Hank: would you comment on the concerns that Patty (McNease) raises below?

Also, wasn't there a "demo" url that could be used for the channels product which went beyond the sample report? Would that show the information that appears to be missing?

Hank:

We present school data in two areas on the portal: underneath a listing's detail and underneath the "Neighborhoods" area. Essentially, where we were displaying data in the page before, a pop-up window containing the MonsterDaata data will open, and some explanatory text will be displayed on the Homes.com listing page instead.

I've provided a couple of URLs for you to view what I've done:

- 1) <http://hcuber.homes.com/Content/ListingDetail.cfm?PropId=4771514>

On the drop-down on this page underneath the "pull down, then click "go" for more information" graphic, select "School Reports", then click "Go".

- 2) <http://hcuber.homes.com/Content/NeighborhoodZipDetail.cfm?ZipCode=32308&Go.x=26&Go.y=3>

On the Neighborhood Zip detail page displayed, there's a link for "Schools" under the "More Details" tab header; click on that to bring up the school data for that zip code.

You can also search Neighborhoods by city and state and county and state, and see how the school data is presented there as well.

Let me know what you think.

Joel

Subject: MonsterData School Data Displaying on Listing Detail

Hi Jesse

We have received a few complaints so far with regards to the listing detail page displaying monster data school information when the agent has chose their "schools" button to link to and outside website. For example, go to <http://www.capecodrealestate4sale.com/> and click on schools it goes to an outside link. Now go to a listing and choose a school detail http://www.capecodrealestate4sale.com/content/listdetail.html/7048308?propops=1&ag_id=306197&city=Brewster,+MA&show_listings=1&selectvirtualprops=1&startpos=1&endpos=10&kids=7048308,7496778,3528689&propertyCount=3

this displays the monster data, which the agent doesn't want.

Is there anyway to synch these up?

Thanks.

Hank:

On the URL that we construct to pull school reports from MonsterData, we're passing along a "hideaddress" flag on the URL that, coming from a listing on our customers' pages, is intended to indicate that the property address should not be displayed. As the property address is still appearing when the flag is 1, e.g.,

<http://www.neighborhoodplace.com/geochooser/?hideaddress=1&sn=1903+Myrick+Road&pl=FALSE&ASSEKst=Fl&zip=323303&fn=address&un=home&pw=home&spi=CH%5FHOMES%5FHTML&domain=SchoolCompleteChv2%2D2>

(coming from http://www.homesbykelsey.com/content/listdetail.html/7399169?propops=0&ag_id=766258&startpos=1&endpos=10&kids=7399169&propertyCount=1)

it looks as though the script on MonsterData's end is not recognizing the flag properly. Would you look into that and get back to me or Jesse?

Also, Patty brings up another issue below as well with school data being displayed (or not). If you would look into that as well, that'd be great.

Thanks, and

Joel

Checking the 'School Data' popup off of homesbykelsey.com, which seems to be a Monster Data subscriber, we are passing to them a parameter called 'hideaddress=1'. I assume, therefore, that the error is somewhere on their end, since we are indeed telling them to conceal the property address.

Answers:

1. I thought that Russell had added a toggle in Control Panel for customers to turn on or off whether or not addresses appeared. I or Jesse would have to check on that and see if it's working or not.

2. I don't understand what the error is supposed to be here. I am seeing another problem --- at least for Leon County --- where it's not showing me any schools at all in a given district or districts but is still asking me to select from a list of schools. It doesn't appear to happen for searching by city or state, though, or if you come from a property.

Joel -

Not sure if you handle these or if we should forward to MD, but wanted to run by you first. We have run into the following two concerns:

1. Complaints from customers that address of property appears at the top of the MonsterData info. Most agents/brokers prefer to remove this info and have consumer request address. Do you know if we discussed the ability to not receive addresses in the data we get from them?

2. When selecting school information on the Channels report, you are asked to "Select up to 3 schools and click "Go" for information."

Problem is if you select 1 school on each page of school list, it will only run "only" the schools on the last page. Appears to be some type of bug or maybe they just need to change their wording.

Thanks in advance.

Patty
