The Software Rights Archive serves as a trusted, objective source of historical information about the development of software from its origins through the present day. The Archive contains a large library of licensed source code, rarer forms of technical literature and documentation, and oral histories by numerous key individual contributors to the development of information technology, with a particular focus on contributors to the Unix and the Gnu/Linux Operating systems. Archive information is indexed, tagged and organized electronically into topical Timelines so that it can be searched in a highly efficient manner using sophisticated search methodologies.

The Software Rights Archive is designed to provide intellectual property counsel researching issues of software copyrights, trade secrets, patents, etc. with actionable information available nowhere else.
