**DEFENDANTS' CLAIM
CONSTRUCTION BRIEF
REGARDING UNITED STATES
PATENT NO. 6,144,702**

Date: May 18-20, 2004
Time: 9:30 a.m.
Ctm: 9C

1 Under these cases, the Court may not rewrite claim 1 and replace “compressor”
2 with “decompressor,” as the PTO has done, for causes of action arising before
3 April 15, 2003. The error in claim 1 is not an obvious minor typographical or clerical
4 error that is subject to correction by the Court. This fact is evidenced by the
5 patentee’s request for a certificate of correction. If the error is minor, then a
6 certificate of correction was not necessary—the Court could simply correct the claim.
7 The actions of the PTO further demonstrate that the error is not minor. According to
8 the *Patent Office Rules and Practice*, “mistakes which are too trivial, inconsequential,
9 or obviously recognized will not warrant the issuance of a certificate of correction.”
10 *Id.* at 1356 (citing § 323 [A][1]). Indeed, if the error was minor and obviously
11 recognized, the PTO would not have issued a certificate of correction. Since the error
12 is not obviously recognized and thus subject to a reasonable debate, the Court may
13 not rewrite the language of claim 1. Accordingly, the claim does not recite what the
14 applicants believed was their “invention” and the claim is invalid under § 112, ¶ 2.

15
16 **F. “transceiver”: The Court Should Construe this Limitation to Mean**
17 **a Combination of a Transmitter and a Receiver in a Common**
Housing that Uses Common Circuit Components for Both
Transmitting and Receiving.

18 All three independent claims of the ‘702 patent recite a “transceiver” in data
19 communication with the transmission system. The IEEE dictionary defines a
20 “transceiver” as: (1) The combination of radio transmitting and receiving equipment
21 in a common housing, usually for portable or mobile use, and employing common
22 circuit components for both transmitting and receiving, and (2) A combination
23 transmitter and receiver in a single housing, with some components being used by
24 both parts. (Ex. NN at 574.) Similarly, Webster’s defines “transceiver” as
25 “[*transmitter + receiver*]: a radio transmitter-receiver that uses many of the same
26 components for both transmission and reception.” (Ex. MM at 564.) These
27 definitions are consistent with the patent’s use of transceiver and the use of the term
28 in prosecution history. Accordingly, the claim limitation may be given its common

1 dictionary meaning. *ACTV*, 346 F.3d at 1091.

2 **G. “temporary storage device”: The Court Should Construe this**
3 **Limitation to Mean a Device that Stores Electronic Data that can be**
4 **Overwritten.**

5 The term “storage device” appears in the three independent claims of the ‘702
6 patent. A few dependent claims, namely claims 14, 16, 41, and 42, further recite
7 “wherein said storage device is a temporary storage device.” In the context of the
8 claims, the term “storage device” does not refer to all devices that store, such as
9 shelves, boxes, and drawers. Rather, the storage devices recited in the claims store
10 electronic data. The specification provides a number of examples of electronic
11 storage devices, including computer tapes, computer disks, cartridges, and digital
12 cassette tapes. (‘702 patent at 6:16-19, 12:21-29.)

13 The IEEE dictionary does not include a definition for “temporary storage
14 device.” However, the IEEE definition of “temporary storage” and Webster’s
15 definition of “temporary” provide guidance. IEEE defines “temporary storage” as
16 “storage locations reserved for intermediate results.” (Ex. NN at 573.) Webster’s
17 defines “temporary” as “lasting for a limited time only: existing or continuing for a
18 limited time: IMPERMANENT, TRANSITORY.” (Ex. MM at 563.) Consistent with these
19 definitions, a “temporary storage device” is a storage device capable of storing data
20 on an intermediate, or impermanent, basis. Put simply, the electronic data in the
21 storage device must be capable of being overwritten. Accordingly, the Court should
22 construe “temporary storage device” to mean a device that stores electronic data that
23 can be overwritten.

24 **H. The ‘992 patent “ordering means”: The Court Should Find the**
25 **Corresponding Structure to Be the Time Encoder With its**
26 **Associated Algorithms.**

27 Claim 1 of the ‘992 patent recites an “ordering means, coupled to the
28 conversion means, for placing the formatted data into a sequence of addressable data
blocks.” The parties have already submitted proposed constructions for the phrase
“sequence of addressable data blocks,” which is part of the function performed by the

**DEFENDANTS' RESPONSIVE
CLAIM CONSTRUCTION BRIEF
REGARDING UNITED STATES
PATENT NO. 6,144,702**

26
27 Date: May 18-20, 2004
Time: 9:30 a.m.
28 Ctrm: 9C

1 for causes of action arising before April 15, 2003. In fact, Acacia's arguments that
2 the error is obvious only serves to undermine its claim that this Court should rewrite
3 it. The Court in *Allen Engineering* rejected this very argument—"it is of no moment
4 that the contradiction is obvious: semantic indefiniteness of claims 'is not rendered
5 unobjectionable merely because it *could* have been corrected.'" *Id.* (emphasis in
6 original). In fact, it is precisely because such errors *can* be corrected (by the PTO)
7 that the Federal Circuit is unsympathetic to patentee arguments that their claims
8 *should* be corrected (by the courts). "Moreover, it does not seem to us to be asking
9 too much to expect a patentee to check a patent when it is issued in order to
10 determine whether it contains any errors that require the issuance of a certificate of
11 correction." *Southwest Software, Inc. v. Harlequin Inc.*, 226 F.3d 1280, 1296 (Fed.
12 Cir. 2000); *Superior Fireplace Co. v. Majestic Products Co.*, 270 F.3d 1358, 1373
13 (Fed. Cir. 2001). Acacia was free to ask the Patent Office to correct the error in claim
14 1 at any time after the patent issued on November 7, 2000. That it failed to do so for
15 more than two years after the '702 patent issued, and then only after suing dozens of
16 companies, suggests either that the error is not as obvious as Acacia would have the
17 Court believe or that Acacia failed to diligently review the patents it now contends is
18 infringed by nearly every communication industry in the country.

19 **F. The Court Should Construe "transceiver" to Mean a Combination**
20 **of a Transmitter and a Receiver in a Common Housing that Users**
21 **Common Circuit Components for Both Transmitting and Receiving.**

22 There is no apparent dispute between the parties that the ordinary meaning of
23 the claim term "transceiver" is at least "a device that is capable of both transmitting
24 and receiving data." It is axiomatic that such a device must contain both a transmitter
25 and a receiver, which comports with Defendants' proposed construction. Given that
26 the parties also appear to agree that a transceiver is a single device, there is also no
27 apparent dispute that the transmitter and receiver that comprise the transceiver must
28 share a common housing, even though Acacia's proposed construction omits this
obvious and inherent limitation. (See '702 patent at FIGS. 2b, 6) (illustrating the

1 transceiver as a single box). Where the parties' proposed constructions diverge is in
2 the requirement that the transmitter and the receiver use some common circuit
3 components.

4 Apparently ignoring its own exhortation that during claim construction the
5 litigants must "be fair with the facts," Acacia quotes in its opening brief the portions
6 of select dictionary definitions for the term "transceiver" that it favors, and omits,
7 without comment, those portions of the dictionary definitions it dislikes. For
8 example, Acacia conveniently omits from its quotation of the *Dictionary of*
9 *Information Technology*, the first definition of the term "transceiver"—"a radio
10 transmitter and receiver unit in one housing and employing some common circuits,
11 normally used for portable or mobile operations," a definition that is fully in accord
12 with Defendants' proposed construction. (See Pl.'s Br. at 26; Block Decl. Ex. 17.)
13 Acacia also ignores the first definition of "transceiver" provided by the *IEEE*
14 *Standard Dictionary of Electrical and Electronics Terms*, 6th Ed.⁷—"The combination
15 of radio transmitting and receiving equipment in a common housing, usually for
16 portable or mobile use, and employing common circuit components for both
17 transmitting and receiving"—which is also fully in accord with Defendants' proposed
18 construction, in favor of a portion of the third definition provided by that reference.
19 (Pl.'s Br. at 26; Block Decl. Ex. 19.) Acacia also omits from its citation to the
20 *Dictionary of Computing* the third sentence in the definition—"Many communication
21 devices, including *modems, codecs, and terminals, are transceivers." (Pl.'s Br. at
22 26; Block Decl. Ex. 18.) Modems, an acronym for modulator/demodulator, and
23 codecs, an acronym for coder/decoder, are devices that perform two functions using
24 shared circuitry. Notably, Acacia also failed to mention that in *Inline Connection* the
25

26 ⁷ Acacia's reliance on the 6th Edition of this dictionary, which is copyrighted 1996,
27 is misplaced given that it was published more than 5 years after the priority filing
28 date of the '702 Patent. *Brookhill-Wilk 1, LLC v. Intuitive Surgical, Inc.*, 334 F.3d
1294, 1299 (Fed. Cir. 2003). Notably, Acacia was content to use the 5th Edition of
this dictionary in its previous claim construction briefs. Regardless, the primary
definition provided by the later edition is identical to the definition provided by
the 5th Edition.

1 court cited the entire definition of the term “transceiver” found in the *Dictionary of*
2 *Computing* when it construed “transceiver” as having its ordinary meaning. *Inline*
3 *Connection Corp. v. AOL Time Warner, Inc.*, 302 F.Supp. 2d 307, 325 n.79 (D. Del.
4 2004). Unlike the defendant in *Inline Connection*, Defendants urge the Court to
5 adopt the ordinary meaning of the “transceiver” and by the same token reject
6 Acacia’s call to adopt a partial definition of the term.

7
8 **G. The Court Should Construe “temporary storage device” to Mean a
Device that Stores Electronic Data that can be Overwritten.**

9 In the context of data transmission, one of skill in the art would understand that
10 a temporary storage device is a device in which data may be stored on an
11 impermanent basis. Unlike a permanent form of data storage such as a CD-ROM
12 disk, a temporary storage device may take the form of a hardware buffer, cache, or
13 hard disk drive. As such, the distinction between temporary storage and permanent
14 storage is the ability of the former to permit data to be overwritten.

15 Acacia proposed construction—“a device into which data may be placed,
16 retained for a limited time, and retrieved,” (Pl.’s Br. at 28-29.) while not appearing
17 significantly different than that proposed by Defendants, is so amorphous as to be
18 unhelpful. For example, what is “a limited time”? Does the phrase “a limited time”
19 provide the jury with any more guidance than the word “temporary”? In comparison
20 to the age of the earth, a limited time could be a million years. In this admittedly
21 extreme example, there would be no practical difference between temporary and
22 permanent storage, and the limitation would be rendered a nullity. Defendants’
23 practical construction of this limitation provides the jury with a useful distinction
24 between the two forms of storage device.

25
26 **H. “Ordering Means”: The Court Should Find the Corresponding
Structure to Be the Time Encoder With Its Associated Algorithms.**

27 In construing the “ordering means” limitation of the ‘992 patent, Acacia
28 wrongly contends that the function of “placing items into a sequence of addressable

20 SA CV 03-1807 JW (MLGx)

1 pattern of treating these claims as the proverbial “nose of wax” to ensnare activities that
2 were never contemplated by the inventors or the USPTO when allowing these patents to
3 issue.

4 **F. The Court Should Construe “transceiver” in Accordance with Its Well-
5 Understood Dictionary Meaning.**

6 The parties have cited several dictionaries that define the term “transceiver,” and nearly
7 every dictionary defines the term as a combination of a transmitter and a receiver in a
8 common housing that uses common circuit components for both transmitting and receiving.
9 (May 7, 2004 Block Decl. Ex. 17-19; Ex. MM.) As is now commonplace, Acacia’s
10 construction attempts to eliminate the requirement of a transceiver from the claims. Under
11 Acacia’s view, as argued at the hearings, a transmitter and a receiver become a transceiver
12 when they are connected with a simple wire. Acacia’s construction is entirely at odds with
13 the well-understood meaning of the term “transceiver.” The fact that a computer, cable
14 box, or whatever type of device Acacia is concerned with⁹ can both transmit and receive
15 does not mean that the device automatically contains a transceiver. Only when the
16 transmitter and receiver use common circuit components to transmit and receive, which is
17 typically the case only when the device both transmits and receives over the same line, can
18 the transmitter and receiver qualify as a transceiver.

19 Likewise, Acacia’s argument that figure 6 of the patent supports its construction of
20 “transceiver” is, in a word, incredible. Figure 6 clearly labels box 201 as the “transceiver”
21 portion of the reception system. If anything, that is the “transceiver” of claim 1. Despite
22 this clear disclosure, Acacia asks this Court to find that its definition of “transceiver” is
23 correct because the “transceiver” of figure 6 is really boxes 201 and 207 combined. This is
24 nonsense. Box 207 is labeled “user/computer interface” and is nowhere discussed in the
25 patent specification. There is no support for including this box as part of the “transceiver”
26 of claim 1 to aid construction of the claim term.

27 ⁹ As pointed out during the May 19 hearing, it is unclear why this limitation is being
28 construed in this case because communication over the Internet is accomplished through
modems, which are a type of transceiver. This term appears to be the center of a dispute
between Acacia and parties that are not a part of this action.

1 Accordingly, the Court should construe “transceiver” to mean a combination of a
2 transmitter and receiver in common housing that uses common circuit components for both
3 transmitting and receiving.

4 **G. Acacia’s Construction of the “ordering means” Limitation Approaches**
5 **Claim Construction Backwards—By Looking to the Proposed Structure to**
6 **Define the Function, as Opposed to the Other Way Around.**

7 The “ordering means” limitation of claim 1 of the ‘992 patent recites the function of
8 “placing items into a sequence of data blocks.” Defendants have construed this function
9 consistent with the plain meaning of the terms and the patent specification to mean placing
10 the formatted data into a continuous series of memory units that contain digital information
11 that can be given an identifier. In an attempt to limit this function to audio and video
12 systems, thereby excluding the transmission of books and documents from the claims (and
13 likely a large number of prior art references), Acacia ignores the plain meaning of the
14 words and contends that the inventors acted as their own lexicographers. Under this
15 pretext, Acacia looks to the specification and, correctly, finds the only “structure” that
16 performs the function is the “time encoder.” Acacia reasons that because this is the only
17 structure disclosed, the function must be construed to recite the purported function of the
18 “time encoder.” Acacia’s analysis and reasoning is backwards.

19 “Construction of a means-plus-function limitation involves two steps. *First*, the
20 court must identify the claimed function. . . . *After* identifying the claimed function,
21 the court must then determine what structure, if any, disclosed in the specification
22 corresponds to the claimed function.” *Cardiac Pacemakers, Inc. v. St. Jude*
23 *Medical, Inc.*, 296 F.3d 1106, 1113 (Fed. Cir. 2002) (emphasis added). Indeed, the
24 Federal Circuit has condemned the analysis applied by Acacia in this case:
25 [T]he trial court determined the function by first searching for the corresponding
26 structures, finding those structures in figures 11 and 12. *We find that justification*
27 *inadequate, because such a reasoning turns our rule of construction for means-plus-*
28 *function claims upside down.* The district court’s approach essentially starts with a
structure, and defines the function in light of that structure. *Our case law, however,*
requires the exact opposite procedure: In construing means-plus-function claims,
courts must first identify the claimed function using traditional tools of claim
construction and then determine the structure corresponding to the identified
function.”

29 *Omega Engineering, Inc. v. Raytek Corp.*, 334 F.3d 1314, 1330 (Fed. Cir. 2003)
30 (emphasis added); *see also Micro Chem., Inc. v. Great Plains Chem. Co., Inc.*, 194 F.3d
31 1250, 1258 (Fed. Cir. 1999) (stating that the district court erred by “incorporating unrecited
