

I object to the proposed Settlement *In re Google Buzz User Privacy Litigation*, No. 5:10-cv-00672-JW.

FILED

I only disagree with the *First* part of the Settlement. First- Buzz should not only be clarifying Buzz operation and users' options, the changes regarding user information and control over Buzz's privacy settings, but completely all together getting rid of privacy infringement capabilities. Google Buzz should not be able to store private information or use it. A user that wishes to share such information should elect to do so from the first time they use it. They should not have to work to find out what about them is being revealed and work some more to figure out how to stop it, especially since there is no reversal process technologically or emotionally.

Radio stations should not be warning their listeners to create fake names and accounts to use the internet. We should all feel free and safe to do so.

My attorney will not appear at the Fairness Hearing
