Subject: RE: Booth feedback

A few more:

- "The menu looks just like iPhone. But I like it cause it looks familiar to me."
- "I heard this device has good graphics performance. That's very important to games."
- "This phone feels so light! I hope the battery will last."
- "Please add Right-To-Left text support. This will certainly be a hit in Arabic market, where people are paying \$600 for crappy Nokia phones."
- "The UI is much more responsive than Nexus One. What has Samsung changed?"
- "Where is the version with keyboard?"

Subject: RE: Booth feedback

Hi all,

In addition to Madan comments:

1. Can I turn off TouchWiz and just use the regular UI as a end user?
2. What sort of battery life performance can we expect?
3. Which US carrier will this handset ship with?
4. What brand of CPU is it using?

Regards,
Ciaran Rochford

Martin,

Here are some comments overheard.

- GalaxyS looks very similar to iPhone
- When is GalaxyS available in the market ?
- What is the price point of the GalaxyS
- Will GalaxyS go on Froyo or Éclair ? (interested in froyo)
- How can I use front facing camera?
- How can get access to samsung android devices (without paying/buying for development)

-Madan

Hi all,

I know you are insanely busy at the moment but if you have a moment please send me couple of lines of the good, bad and the ugly from Google I/O, the most common questions you received from developers.

Thanks!

Martin
