

## EXHIBIT 2.11

Photomesa would be combined with Jaeger (US 2004/0027398) which teaches “The general mouse release process is now described with reference to the flow diagram of FIG. 34. At block 110, how far the object has moved since it was picked up is calculated. When a user lets go of the mouse after dragging an object, the software immediately works out how far the object has been moved and saves this information as a vector. This is an important piece of information as it enables the object being dragged to snap back to its original position.” (Paragraph 0424).

Thus, the combination would replace Photomesa’s home button with an automatic snap back feature when the user lifts the mouse button.

The third reference, previously cited, teaches the touch screen functionality.
