WSJ: Verizon iPhone Debuts Early 2011

By [Brian X. Chen](#)   October 6, 2010 | 2:29 pm | Categories: [Phones](#)
[@bxchen](#) · 8,844 followers

Apple will begin mass producing a Verizon-compatible iPhone that will debut in early 2011, *The Wall Street Journal* reported Wednesday.

The [Verizon iPhone](#) will be similar to the iPhone 4 in design and be based on the CDMA standard used by Verizon, according to WSJ, who cites “people briefed by Apple.”

Apple does not officially comment on product rumors.

WSJ’s latest article is slightly inconsistent with its March report claiming that Apple would begin [mass producing a CDMA-compatible iPhone](#) in September. The March report did not suggest a release date for a presumed Verizon iPhone.

Technology observers have learned to take Verizon iPhone rumors with a big grain of salt. Speculation about a Verizon iPhone has run wild ever since the original iPhone’s launch on AT&T. Multiple publications have published rumors claiming different release dates for the fabled device (see part of the list below).

Wired magazine's Fred Vogelstein published a feature in July illustrating that a [Verizon iPhone is stifled by complicated business negotiations](#), not technical limitations; Steve Jobs has actively considered splitting with AT&T for over a year.

Isn't this like the 10th time they've 'confirmed' a Verizon iPhone?

Suprised I haven't seen more about the Verizon iPhone debut in 2011. Do you think it will really happen?
