A A A

We are LIVE at the Mobile World Congress in Barcelona, where much of the wireless [industry](#) is gathered this week to *ooh* and *ahh* at new products, talk about the Nokia-Microsoft deal, make fun of each other's ad campaigns, wonder where Apple is, etc.

Disclaimer: Samsung was generous enough to sponsor our trip to Barcelona, fly us in posh [business](#) class, and stuff us with tapas and jamón. (Photos forthcoming!) So we're feeling pretty warm and fuzzy about Samsung right now!

That said, we will continue to strive for editorial accuracy and fairness, and we don't think that our Mobile World Congress coverage will be different as a result. We will be speaking to and writing about as many companies as possible, live blogging the major events, etc. (Except Sony Ericsson, who says its press event tonight is "full." Thanks a lot!)

Anyway, this morning, we and several other reporters briefly had access to Samsung's new gadgets -- the new 10-inch Galaxy Tab tablet and the Galaxy S II smartphone -- which they're officially revealing at the show. Most of the details have been leaked already; you can see plenty of photos and information [on Techmeme](#).

The "Galaxy Tab 10.1," as it's called, is basically an iPad-sized version of the Galaxy Tab, running Google's new Android 3.0 "Honeycomb" [software](#).

From the front, it looks like an iPad, just made out of high-end plastic instead of metal, and runs the new Android, which is vastly improved for tablets but still feels less polished than Apple's iOS. (We expect Android to [do okay in tablets](#), but not as well as it has in phones. [See our analysis here.](#))

But it's nice and light, and has two cameras, so those considering an Android tablet will have choices between the new Galaxy Tab, the Motorola Xoom, and others.

The Galaxy Tab 10.1 will NOT be launching immediately in the U.S., and Samsung isn't saying yet when it will be available in the States. And no word on pricing.

But it's smart that Samsung is branching out from the 7-inch Galaxy Tab, as we think tablet buyers will find the bigger, 10-inch devices more useful.
