***Allowable Subject Matter***

1. The following is an examiner's statement of reasons for allowance: The present invention relates generally to the field of wireless communications, and in particular, to a portable composite communication terminal for transmitting/receiving voice and images and a communication method and system thereof.

The prior art of record in combination or alone fails to teach or suggest these elements of independent claim 1 in combination with other elements. For example independent claim 1 has claim limitations such as entering a first E-mail transmission sub-mode upon user request for E-mail transmission while operating in a portable phone mode, the first e-mail transmission sub-mode performing a portable phone function, entering a second E-mail transmission sub-mode upon user request for E-mail transmission while operating in a display sub-mode, the second e-mail transmission sub-mode displaying an image most recently captured in a camera mode, sequentially displaying other images stored in memory through the use of scroll keys, transmitting the address of the other party and a message received through a user interface in the first E-mail transmission sub-mode, and transmitting the address of the other party and the message received through the user interface and the image displayed on the display as E-mail in the second E-mail transmission sub-mode. For the above reasons Independent claim 1 is allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

**Conclusion**

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

--(6,427,078) to Wilska et al. discloses device for personal communication, data collection and data processing, and a circuit card.

--(6,370,546) to Kondo discloses first information processing device directly accessing, updating second information process device and vice versa via transmission bus management authority.
