			PLAINTIFFS' MOTION TO COM

NOTICE OF MOTION AND MOTION TO ALL PARTIES AND THEIR COUNSEL OF RECORD: PLEASE TAKE NOTICE that pursuant to this Court's Order dated June 30, 2016 (Dkt. 203), the undersigned Plaintiffs will and hereby do move the Court for an order granting Plaintiffs' Motion to Compel Further Document Searches by Defendant, Facebook, Inc. This motion is based upon this Notice of Motion; the accompanying Memorandum of Points and Authorities; the Declaration of David T. Rudolph filed herewith; the argument of counsel, if requested; and such other matters as the Court may consider. STATEMENT OF ISSUES TO BE DECIDED Whether, consistent with the requirements of Federal Rule of Civil Procedure 26(b), Defendant Facebook, Inc. should be compelled to produce documents identified through further document searches using Plaintiffs' proposed search terms and custodians reflected in Appendix A.

I. INTRODUCTION

21

Pursuant to this Court's Order (Dkt. 203), Plaintiffs respectfully request the Court to compel Facebook to search for and produce documents using search terms, methodologies, and custodians that are appropriately and proportionally calibrated, pursuant to Fed. R. Civ. P. 26(b), to the scope of Plaintiffs' claims as articulated in the Court's Class Certification Order ("Cert. Order") and the Second Amended Complaint. While the parties have, through meet-and-confer efforts, substantially narrowed their areas of disagreement post-certification, significant disputes remain.

The deficiencies addressed in this brief involve three, interrelated issues: **First**, Facebook's current document production is woefully inadequate because Facebook collected documents through keyword searches that not only omitted highly-relevant terms (which Plaintiffs later identified through discovery) but also substituted critical keywords with generalized terminology that Facebook acknowledges is not used internally.² Thus, large swaths of relevant discovery were purposefully ignored. **Second**, and compounding the above error by relying on its objections as to scope (the validity of which this Court consistently has rejected, and which, in any event, are now inarguably invalid in light of the Cert. Order), Facebook trained its "predictive coding" software to categorize as irrelevant documents unrelated to "increasing the Like count" (Facebook's definition of the "challenged practice")—thus excluding relevant documents from further review and production. Third, Facebook remains unwilling to conduct searches from the files of relevant custodians.

Plaintiffs immediately objected to Facebook's improper use of predictive coding and

²²

²⁴

²⁵

²⁶

²⁷

²⁸

The documents sought by this motion are responsive to Plaintiffs' Requests for Production 4-11 and 18-20, which seek technical documents related to the claims at issue. The Requests, and Facebook's responses thereto, are attached as Exhibits 3 and 4, respectively, to the Declaration of David Rudolph ("Rudolph Decl."), filed herewith. Unless otherwise stated, all exhibits are to the Rudolph Declaration.

² As discussed in greater detail below, a prime example is Facebook's exclusion of the terms "EntShare" and "EntGlobalShare" from any of its searches, instead using the terms "share object" and "global share object." This omission is inexcusable given the fact that EntShares and EntGlobalShares lie at the heart of each of Plaintiffs' claims, and is further inexplicable given the fact that Facebook's seminal declarant and witness. Alex Himel, has acknowledged that "share object" and "global share object" footnote 6, infra.

22

20

21

27

28

objected to Facebook's inadequate keywords immediately upon determining that Facebook's searches clearly had not implemented the terminology most relevant to this case. Plaintiffs promptly requested that Facebook supplement its production with documents located by searches using appropriate keywords. Facebook initially refused to produce any further documents, but eventually agreed to a clearly inadequate token search using a subset of the relevant terms on only three out of the more than forty custodians Facebook has identified thus far.

After repeatedly meeting-and-conferring on these topics, Plaintiffs have significantly narrowed their requests to terms—including keyword proximity searches limiting those terms that correctly reflect the scope of Plaintiffs' claims as articulated in the Second Amended Complaint and the Cert. Order, and which also address Facebook's concerns regarding burden and proportionality, and thus satisfy Fed. R. Civ. P. 26(b). The parties' respective positions on the appropriate search terms, as well as the appropriate temporal scope of discovery, is attached to this brief as Appendix A. While the parties have reached general agreement on many topics, substantial disputes remain, particularly with respect to time period for which documents should be searched. Given Facebook's recent admissions both shortly prior to and shortly after Plaintiffs amended their Complaint, Facebook's representations about what may or may not have ceased cannot be taken at face value. Plaintiffs respectfully request, pursuant to this Court's Order (Dkt. 203), that the Court order Facebook to conduct further document searches consistent with Plaintiffs' proposed search terms, for the full class period.

II. **ARGUMENT**

Facebook's Initial Insufficient Document Production Efforts Α.

At the start of discovery, Facebook indicated it would search for documents containing various terms identified by Facebook from its first round of interrogatory responses. These terms largely consisted of non-technical phrases relating to Facebook's "Like" counter, such as "like button count," "share object," "share button" or "URL" in proximity to terms such as "messenger" or Unbeknownst to Plaintiffs, however, these terms did not reflect the actual terminology employed internally by Facebook engineers with respect to the practices at ³ Ex. 11 (Letter dated May 13, 2015 from Facebook's counsel to Plaintiffs' counsel).

PLAINTIFFS' MOTION TO COMPEL PRODUCTION OF DOCUMENTS CASE NO. 13-CV-05996-PJH (SK))

issue, and omitted many key components of Facebook's architecture that are employed in scanning, cataloging, and using Private Message content. Moreover, *after* Facebook indicated it would collect and review documents based on these search terms, it revealed that, rather than manually review the documents for relevance, it would employ computer-aided "predictive coding" to *further* narrow the documents related to these narrow search terms for subsequent manual review. Plaintiffs objected to Facebook's implementation of predictive coding, pointing out that predictive coding is designed to be used *in lieu of*—as opposed to *in addition* to—keyword searches. Facebook's process of keyword culling is discouraged and recognized by courts and predictive coding experts as a flawed methodology that is likely to filter out a significant portion of responsive documents.⁴ As such, Facebook's document production efforts were flawed from their inception, not only by improper search terms, but also by a coding and review process that improperly narrowed those documents even further.

Compounding this problem, in implementing its predictive coding, Facebook unilaterally imposed an improperly restrictive definition of relevance that this Court has already rejected multiple times,⁵ and which is inarguably untenable in light of the Cert. Order. Just as Facebook failed to include search terms related to the myriad functionalities and uses described below, Facebook also omitted those functionalities and uses when it was training the software to learn the characteristics of relevant documents. In short, since Facebook's predictive coding software was never trained that the appropriate concepts were relevant, it could not identify as relevant documents related to these concepts. Facebook's refusal to implement an appropriate standard for relevance has thus guaranteed that relevant documents were withheld from production and still need to be produced.

⁴ See Tinto v. Vale, No. 14-3042, 2015 WL 4367250, at *1 (S.D.N.Y. July 15, 2015) ("[P]reculling [using keywords] should not occur in a perfect world."); *Progressive Cas. Ins. Co. v. Delaney*, No. 11-678, 2014 WL 3563467, at *11-12 (D. Nev. July 18, 2014) (where parties had stipulated to a keyword then manual review protocol, the court would not allow Progressive to use predictive coding only on the positive keyword hits).

⁵ See, e.g., Dkt. 83 (June 3, 2015 Order), at 7 (rejecting Facebook's argument that challenging "any 'interception' of messages containing URLs for any purpose" demonstrated a shift in position from allegations in Plaintiffs' CAC); Dkt. 130 (October 14, 2015 Order), at 8 (same) (citing CAC at ¶ 86); *Id.* at 13 (citing CAC at ¶¶ 30, 49-51).

B. Facebook's Inadequate Keywords

Facebook proposed grossly inadequate search terms early on in the case, before producing documents that revealed Facebook's internal terminology. For example, in light of the Cert. Order, it is indisputable that two technical terms at the core of this litigation are "EntShare" and "EntGlobalShare" (the data structures Facebook creates from scanning URLs within messages to, inter alia, increment Like counters). Remarkably, in its search terms, Facebook used the term "share object" and "global share object," respectively, in lieu of "EntShare" and "EntGlobalShare." However, Facebook's

Alex Himel—an engineering director whom Facebook has used to verify interrogatory responses, provide multiple declarations, and to provide 30(b)(6) testimony related to message scanning and the Like button—stated

Moreover, as described in detail in the Cert. Order, the scope of the message scanning is broader than incrementing "Like" counters. As further described below (and tracking the Cert. Order), discovery also has revealed the internal architecture (and relevant technical terms) utilized by Facebook to retain, analyze, and use Private Message data. Yet, Facebook deliberately chose not to use the core technical terms relevant to these functionalities and uses, and that failure must be remedied going forward.

C. <u>Plaintiffs' Proposed Searches Fall Within the Constraints Imposed By the Court's Class Certification Order</u>

Against this backdrop, the parties have negotiated further search terms. As can be seen in

⁶ See Dkt. 192 (Cert. Order), at 4.

⁷ Ex. 5 (Himel Dep.), at 154:19-155:7.

⁸ Dkt. 192, at 4-6.

⁹ See also Dkt. 196 (Second Amended Complaint, "SAC"), ¶¶ 45-55.

25	
26	
27	l

Appendix A, the parties are largely in agreement as to the proper terms to be used in further keyword searches. As described in detail in the Cert. Order and the SAC, the scope of the message scanning is significantly broader than incrementing "Like" counters (the focus of Facebook's previous document collection efforts), and includes (a) logging Private Message content for future use; ¹⁰ (b) using Private Message content to push recommendations to its users ¹¹ and targeting users based on Likes and other data points; ¹² and (c) providing demographics data and other analytics related to users and their Private Message content. ¹³

The primary areas of disagreement are (1) what terms should be included in the proximity terms further limiting those searches, (2) the proper time period for the searches, and (3) the proper custodians. Plaintiffs' search proposal has been carefully crafted as a reasonable compromise to address Facebook's proportionality concerns, and it is neither appropriate nor reasonable to limit Plaintiffs' proposed searches any further. Plaintiffs' search terms are focused on highly technical terms directly related to the source code devices Facebook uses to intercept Private Message content as well as the internal systems that use that content, as described in the Cert. Order and in the SAC, and accordingly these requests satisfy the proportionality and other requirements of Rule 26(b)(1) and (b)(2):

<u>Creation of EntShares and EntGlobalShares:</u> The terms "EntShare" and "EntGlobalShare" are at the center of Plaintiffs' claims. As the Court noted, Plaintiffs allege that Facebook intercepts Private Message content for uses not related to message delivery through the creation and manipulation of EntShare and EntGlobalShare objects. ¹⁴ Facebook appears to concede the centrality of these terms, given that it has agreed to search for these terms for the

Relevant terms include: EntShare, EntGlobalShare, Link_stats /

Relevant terms include:

(which is a critical term in multiple contexts).

Relevant terms include:

Graph API,
, and

¹⁴ Dkt. 192, at 4 ("Plaintiffs then specifically describe the three ways in which the message data is allegedly redirected and used. The first is to 'fuel its algorithms for measuring user engagement and making recommendations.' This alleged use is related to the 'EntShare' and the 'EntGlobalShare' described above…'").

1 entire class period (albeit with improperly restrictive proximity searches). Logging of Data Created From Private Message Content: Once it scanned its users' 2 3 Private Message content, Facebook logged that data in several places on its system for additional, subsequent use. This is directly relevant to Plaintiffs' allegations regarding how Facebook 4 utilized message content.¹⁵ These logging tables include or relate to 5 6 the table, and the log. The table has fueled, inter 7 alia, APIs that are made "publicly [available] in order to allow for the development of products 8 and features that incorporate engagement statistics—products that take into account what people 9 are interacting with now."¹⁷ Similarly, the table and stored data related to Private Message content¹⁸ that has been used by Facebook in at least several 10 instances unrelated to message transmission, including fueling recommendations, ¹⁹ displaying 11 users' actions in an "Activity Feed,"²⁰ and fueling queries to a product called the 12 Each of the above-described components of Facebook's system are, by Facebook's own 13 14 admission, areas where data created from Private Message content are logged for further use. 15 Use of Private Message Content for Recommendations: Facebook used information 16 acquired from intercepted message content to make recommendations to its users. Plaintiffs' 17 expert, Dr. Jennifer Golbeck, identified (1) and (3) as portions of the Facebook platform that took 18 data from Private Messages, inter alia, to assess the popularity of the URLs contained therein, 19 identify trends among users, and push content across the social network.²² 20 21 Analytics of Private Message Content: Facebook exposed Private Message content— 22 including the URLs privately shared by users—in both internal and external analytics, thus 23 ¹⁵ See SAC ¶¶ 3, 28, 39, 45-55. 24 ¹⁶ See FB000008505. ¹⁷ Dkt. 149-2 (Jan. 15 Decl. of Alex Himel), at ¶ 66. 25 ¹⁸ See FB000003093, FB000003096. 26 ¹⁹ Dkt. 184-3 (Fechete Decl.), ¶¶ 13-14, 18, 26; Dkt. 199-2 (Golbeck Report), ¶¶ 44-54. ²⁰ FB000002843. 27 ²¹ FB000007859. ²² See Dkt. 199-2 (Golbeck Report), ¶¶ 56-64. 28

	the term "message," and it is not appropriate to limit the searches to only documents that contain
	variants on that term. All of Facebook's proposed search terms are cabined to proximity
	searches of within 50 words of (message* or messenger or or inbox*) AND within 50
	words of (EntShare* or EntGlobalShare* or or or or), and in some cases
	adding additional terms. There is no reasonable basis for such a restriction, and in fact this
	restriction appears designed to avoid the production of otherwise relevant documents. This is
	demonstrated by the fact that many relevant documents already produced do not contain
	"message," "messenger," or anywhere, much less within 50 words of any other relevant
	term. ²⁸ Additionally, the unduly restrictive nature of such a limitation is made apparent by
	several highly relevant documents, in which the only use of the term "message" is in the context
	of the "begin forwarded message" formatting from the custodian's email client; but for the fact
	that the email had been forwarded, such documents would not be produced under Facebook's
	proposed search schema. ²⁹ While the parties appear to have large areas of agreement regarding
	the terms to be used for proximity searches, ³⁰ Facebook's insistence on limiting its searches to
	only those within 50 words of (message* or messenger or or inbox*) is demonstrably
	28 See. e.g., FB000007859 (discussing); FB000004051 (discussing, inter alia, EntShare, EntGlobalShare, and);
	FB000001052 (discussing storing likes and shares); FB000000659 (discussing objects,
	FB000001206 (discussing , and Graph API); and Graph API); and
	FB000008821 (providing an overview of Facebook's targeted advertising).
	logging and displaying data related to likes and shares, and database tables tracking
	likes and shares); FB000002655 (discussing Open Graph API and).
	Two notable areas of disagreement are the terms and "bootcamp," which Plaintiffs propose to include but Facebook does not agree to. As explained in Plaintiffs' concurrently-filed
	motion to compel configuration tables, is the database from which Facebook's "Insights" product, which shared metrics about Private Message content with third parties, drew
	data. "Bootcamp" appears to be Facebook's internal training program and was the process
	through which Facebook introduced its systems to new employees, and therefore documents containing relevant terms and the term "bootcamp" will likely provide explanatory context for
	those terms. See. e.g. FB000003118 (April 25, 2012 internal email stating
	FB000002130

inappropriate. Given that the parties have agreed in many respects on the scope of terms and proximity searches, Plaintiffs' proposals do not add significant burden or expense to the searches Facebook has already proposed, pursuant to Fed. R Civ. P. 26(b)(1).

2. The Searches Should Be Conducted For the Entire Class Period

With one exception, Facebook seeks to cabin its proposed searches to short subsets of the class period on the grounds that the identified practices have ceased. Even if true (which Plaintiffs dispute), this claim provides no basis to limit searches for documents relevant to the challenged practices for less than the entire class period.

The searches should be performed for documents and ESI dated from the previously agreed-upon start of the document production period of April 2010, up through May 18, 2016, the end of the class period.³¹ Facebook's assertions that certain practices may have "ceased" as of certain dates provides no basis to limit the time period for searches. *First*, as this Court is aware, subsequent discovery has demonstrated that, at least in one instance, Facebook's assertions regarding when certain practices ceased were incorrect, and Plaintiffs require documents regarding these practices from the full class period to test the accuracy of Facebook's assertions.³² Second, documents related to the specific practices identified by Plaintiffs' search terms are relevant not only to determine whether and when the practices may have ceased, but also to provide full disclosure of Facebook's implementation of those practices and subsequent use of the contents of communications intercepted by those practices. Third, as discussed in detail in Plaintiffs' concurrently-filed motions to compel source code and configuration tables for the full class period, Facebook's assertion that it has ceased sharing Private Message content with third parties is demonstrably false: recent *post-amendment* admissions by Facebook demonstrate that it continues to intercept URLs in Private Messages and allows third-parties free access to those URLs—all without any disclosure to users of this Practice.³³

 $^{^{25}}$ Ex. 2 (Email correspondence between counsel for the parties).

³² See Dkt. 185 (Facebook's Errata) and Dkt. 187 (Plaintiffs' Objections thereto), (discussing Facebook's false assertion that the Private Messages and used to provide targeted recommendations was deleted prior to the class period).

³³ See Ex. 6 (Why you shouldn't share links on Facebook, Quartz (June 8, 2016)).

The Searches Should Be Conducted on the Full Range of Appropriate **3. Custodians**

Additionally, Facebook has still provided no firm commitment regarding the custodians it

2 3

4

5

6

7

8

9

10

11

1

is willing to search. Facebook has stated it is "willing to consider" producing documents from "some" of the non-individual custodial sources, such as its document repositories that contain the search terms proposed in Appendix, there should be no ambiguity regarding

³⁵ Ex. 5 (Himel Dep.), at 255-14-256:12

26

27

28

Given that Facebook has already produced numerous documents from each of these custodians

Facebook's responsibility to search those custodians. Facebook has resisted searching documents from the non-individual custodial sources on the grounds that "those sources do not have search

capabilities that will allow for the types of searches we are considering for emails, and they also are not amenable to efficient collection processes."³⁴ However, this is not consistent with

Facebook's own employees' testimony about its document systems;

35 Facebook has

already produced numerous relevant documents from internal system sources and presents no reason why it cannot perform further searches on those sources given the narrow and proportional scope of the requested discovery.³⁶

III. **CONCLUSION**

For the foregoing reasons, Plaintiffs respectfully request that the Court order Facebook to produced documents identified through searches consistent with Plaintiffs' proposed search terms and custodians reflected in Appendix A.

³⁴ Ex. 2 (June 28, 2016 email from Facebook's counsel).

Additionally, Plaintiffs request all documents containing the term "EntShare" from any Facebook wiki sites or other portions of Facebook devoted to or containing reference material on). including those located on web pages with URLs beginning Facebook's operation (e.g., with the following designations:
