1 MR. ISENBERG: Ryan Isenberg On behalf of  
 2 defendants.  
 3 MARK LAWRENCE ZYLA, having been first duly  
 4 sworn, was examined and testified as follows:  
 5 EXAMINATION  
 6 BY-MS.PERKINS:  
 7 Q. Good morning, Mr. Zyla.  
 8 A. Good morning.  
 9 Q. Could you please state and spell your name  
 10 for the record.  
 11 A. Sure. It's Mark Lawrence Zyla. And my  
 12 last name is spelled Z-y-l-a.  
 13 Q. And I take it you have been deposed  
 14 before?  
 15 A. I have yes.  
 16 Q. All right. Then you get the abridged  
 17 version of the rules for the deposition. As you  
 18 know, we have a court reporter here and so it's  
 19 important that I don't talk over you and you don't  
 20 talk over me. Do you understand that rule?  
 21 A. I do.  
 22 Q. And because wave court reporter here and  
 23 huh and huh-uh don't translate well in this written  
 24 transcript. If you could answer yes or no questions  
 25 yes or no please.

1 A. I would assume that yes.  
2 Q. Is there any industry guidance or  
3 literature that would in fact require a firm  
4 preparing a valuation for purposes of incorporating  
5 it into financial statements that would require that  
6 valuation firm to perform that testing?  
7 A. Are you asking from valuation perspective  
8 or.  
9 A. Have evaluation perspective check this  
10 area with audio) there is valuation texts that may  
11 discuss that but I don't know of any particular  
12 standard that says you have to do that.  
13 Q. And then what about in this audit context?  
14 A. Under SAS 101 I believe it's incumbent  
15 upon the auditors when auditing fair value  
16 measurements to test management's assumptions.  
17 Q. Would you expect a valuation firm that is  
18 doing a valuation for use in connection with  
19 financial statements that will be audited to test  
20 management's assertions?  
21 A. I would think that that would be a part of  
22 their practice, yes.  
23 Q. So you would company those relatively  
24 standard practice in the valuation industry?  
25 A. I would think so, yes.

1 Q. Why was that?  
2 A. Because the auditors are required under  
3 SAS 101 to test management's projections so in -- I  
4 know that that may be a request this they're auditing  
5 our work product to I would to be able to answer that  
6 and explain there's how we did it.  
7 Q. Would you typically keep working papers to  
8 be testing of management projections?  
9 A. Typically what we would do is look at  
10 historical trends and then look at the projections  
11 and make sure that they're align there's is nothing  
12 unusual. And we'll include that that's actually part  
13 of your work papers and we'll also sometimes look at  
14 the value drivers an projections in terms of either a  
15 margin or discount rate and we'll run some a table  
16 that says okay if you changed these value drivers by  
17 a certain amount here is the impact is.  
18 Q. Would you also look at industry and  
19 testing the reasonableness of the projections?  
20 A. We could yes.  
21 Q. Would it just depends on a particular case  
22 had you would or would not do that?  
23 A. That's correct yes.  
24 Q. By the way when I said SAS 101 is that  
25 statement on auditing standards 101?

1 MS. PERKINS: Okay. This is actually a  
2 good moment for a break because I'm about to  
3 switch subject areas to if you guys wanted the  
4 take a few?  
5 VIDEOGRAPHER: Ten tape 21059 off the  
6 record.  
7 (Discussion off the record.)  
8 (Recess from TIME ^ a.m. ^ p.m. to TIME  
9 ^ a.m. ^ p.m.).  
10 VIDEOGRAPHER: Start tape No. 3 it's  
11 1110:00 a.m. back on the record.  
12 Q. (By Ms. Perkins) Agreement now right  
13 before we took the break we were stalk can about  
14 testing of management connections in in connection  
15 with a projection in incomes a business valuation?  
16 A. Yes.  
17 Q. And correct me if I'm wrong but I believe  
18 you testified that if you were performing a valuation  
19 and you knew that valuation was going to be  
20 incorporated into financial statements that were  
21 going to be audited that you would conduct some  
22 testing of those projections?  
23 A.  
24 Q. Correct?  
25 A. That he can yes.

1 A. That's correct yes.  
2 Q. Let's go to your report which is in front  
3 of you still. And I'd like I to list the opinions  
4 that you have in this case.  
5 A. You want me just describe each of my  
6 opinions?  
7 Q. Yes. Just give me a list of your what  
8 opinions are.  
9 A. Well, they're listed in if summary under  
10 Roman tool of my of my report I say that there's  
11 there's I believe that there's three that Mr. Duree's  
12 damage calculations for lost customer relationship is  
13 incorrect for three primary reasons.  
14 The first is because he relied on  
15 primarily on a findings of fair value based on an  
16 analysis and other valuation firm did in relation to  
17 a purchase price allocation in my first opinion and I  
18 list three reasons why I believe that that's  
19 incorrect.  
20 Q. Are those three reasons that you list  
21 opinions of themselves or are those why you think  
22 that's incorrect?  
23 A. They support my general opinion I just  
24 stated.  
25 Q. Okay.

1 A. The Faye if a FASB describes it a market  
2 participant it's the value not to that specific owner  
3 of the asset nextly. It's the value -- assumption  
4 that would be used in estimating fair value would be  
5 utilized by a concept market market participants  
6 which means other market that potential acquires for  
7 that particular asset.

8 Q. So it's what somebody who is actually  
9 participating in the market nor an asset would pay  
10 for acquire that asset?

11 A. That's correct yes.

12 Q. Saturday market participant always going  
13 to be willing to pay more for a given asset?

14 A. Not necessarily.

15 Q. Why are are not?

16 A. It would depend on the assumptions that  
17 are utilized I mean when a common market participant  
18 might -- how they would utilize that particular  
19 asset, with that common body of participants, how  
20 they would use that asset. So it's not to a specific  
21 user.

22 Q. Does the market participant assume that --  
23 or does the concept of market participant assume that  
24 the market participant has more information than an  
25 fair value market buyer?

1 willing to pay as a market participant to acquire  
2 that relationship?

3 A. Well, it's assumptions in using and  
4 estimating fair value would be assumptions that a  
5 market participants one of which MostChoice may be,  
6 would utilize in estimating the value of that asset.

7 Q. How did the do the concept of fair value  
8 relate to how NetQuote would have out utilized the  
9 asset ^ ck?

10 A. Well, again there may be synergies that  
11 NetQuote obtained in using the asset. And how they  
12 utilize has they add has they bring to a table that  
13 of that other market participants may or may not  
14 utilize that same particular asset. So market  
15 participants may use a different set of assumptions.

16 Q. Why is fair value inappropriate for  
17 calculating damages in your view?

18 A. Well, in my view that calculating damages  
19 should be to the specific damage so the value to the  
20 entity that's actually being damaged my comment is  
21 utilizing information based on fair value is based on  
22 concepts of marketplace participants to I may or may  
23 not be specific to the entity being damaged.

24 Q. If it is specific to the entity being  
25 damaged, is a fair value analysis appropriate?

1 A. They're totally different concepts.

2 Q. Okay. How so?

3 A. Well, fair market value again is the  
4 standard for tax purposes tithes hypothetical value,  
5 willing buyer, willing seller, would be willing to  
6 pay for a particular asset. Market participants is  
7 an exit value so it's not necessarily what would be  
8 inquired at it's what it would be told so the in  
9 market place, first thing.

10 The second thing is that market  
11 participants -- the fair market value may possibly  
12 include synergies under circumstances. Fair value,  
13 unlikely, unless it's a market participant synergy  
14 might not include gin geez in terms of the valuation  
15 so there are some differences possibly.

16 Q. So would you consider most MostChoice to  
17 be a market participant in the online lead generation  
18 industry?

19 A. Yes. Likely to be market participant for  
20 a specific asset.

21 Q. Okay.

22 A. Yes.

23 Q. All right. And so would using market  
24 participant assumption is the value for a customer  
25 relationship something that MostChoice would be

1 A. It could be. My criticism is though is it  
2 doesn't appear that degree degree didn't actual  
3 consider that at all.

4 Q. But is it fair to say that if it were  
5 actually specific to NetQuote that that objection  
6 would be overcome?

7 A. That is something that a damage expert  
8 should consider yes.

9 Q. Okay. Now, have you ever encountered a  
10 client that placed a different value on an asset than  
11 that that was reported on that are financial  
12 statements?

13 A. I'm not sure I understand that question.

14 Q. Say you have a trademark and the customer  
15 thinks it's worth \$10 million but it's carried on  
16 their financial statements at \$1 million.

17 A. Sure, that could happen all the time.

18 Q. And had a climate's value is higher than  
19 the financial statement value, does the client get to  
20 record that difference?

21 A. Depending on the purposes of the  
22 valuation.

23 Q. If it's not in connection with the sale,  
24 can a client just add the \$9 million to their  
25 financial statements because they think the tray mark

105

107

1 Q. So is 207 line number for example in the  
2 case of an amortizable intangible asset would remain  
3 the same on the balance sheet and then they would  
4 rise charge or amortization?  
5 A. That's one way to show it yes.  
6 Q. Okay. Unless there is impairment  
7 recognized?  
8 A. I believe that's the case, yes. Or  
9 there's a subsequent acquisition or a change in  
10 reporting, it could probably happen. But what you  
11 describe is typical.  
12 Q. Now, let's go back to your first opinion  
13 and we were on subpart one. What facts, exhibits did  
14 you base that conclusion on?  
15 A. I looked at the Quist valuation and I  
16 looked at Mr. Duree's analysis.  
17 Q. Okay. Anything else?  
18 A. Just the general documents we described if  
19 terms of background information about how that  
20 standard is applied.  
21 Q. Anything else?  
22 A. Not that irrelevant.  
23 Q. Okay. Now, let's talk about the second  
24 subpart of first opinion that you articulated. What  
25 is your second reason under the first opinion?

1 estimate his multiples starting point for his  
2 multiple for the damage analysis. My point is that  
3 the date of the purchase price allocation was  
4 August 16th, 2005. That is assumed a seven-year  
5 life. If one were to move that forward, those  
6 customers wouldn't still have a seven-year life under  
7 the Quist analysis.  
8 Q. A customer that assisted as of August 5,  
9 2006 would not have a seven-year life?  
10 A. That's correct.  
11 Q. So if a customer joined the company,  
12 started working with NetQuote after that date, would  
13 that time period have started to run as to that  
14 customer?  
15 A. Rights it could be. But again by my  
16 comment is Mr. Duree didn't seem so take that into  
17 consideration.  
18 Q. Has impact would it had if he had taken  
19 that into account?  
20 A. Well if the life is shorter just  
21 mathematically the value would be much less. Or  
22 would be less.  
23 Q. Did you quantify what the difference would  
24 be and the damages result based upon that life issue?  
25 A. I did not, no.

106

108

1 A. My second reason is that the date of  
2 damage at least according to the third amend amend  
3 complaint began on October 9th, 2006, Mr. Degree  
4 utilizes data from the purchase price allocation that  
5 began on August 16th, 2005. So by utilizing that  
6 data he doesn't adjust to for if a fact if an its  
7 more has been a year later so he consequently by not  
8 making that adjustment overstates his conclusion.  
9 Q. Does that conclusion assume this the value  
10 of the customer relationships has decreased?  
11 A.  
12 Q. In that period between August 2, 2005 and  
13 October 2006?  
14 A. D D.  
15 A. Well, has that conclusion assumes is that  
16 even if one were to assume is that seven-year life  
17 arbitration year later those clients typically  
18 wouldn't have a seven-year life on the settles. And  
19 that directly relates to a value.  
20 Q. Could you explain that?  
21 A. Sure. The Quist analysis utilizes an they  
22 estimate or assume a seven-year life of the customers  
23 that were existing as of the date of acquisition for  
24 their analysis and purchase price allocation.  
25 Mr. Degree uses revenues from that same analysis to

1 Q. And what facts or evidence did you rely  
2 upon in reaching that conclusion?  
3 A. The conclusion listed in B?  
4 Q. Yeah in B.  
5 A. I looked he Quist valuation report and  
6 their assumptions and their valuation I also looked  
7 at Mr. Duree's report.  
8 Q. Anything else else?  
9 A. Again the general documents that we  
10 discussed.  
11 Q. Okay.  
12 A. And by general documents, you mean the  
13 other documents that are listed in the index to the  
14 notebook that you produced.  
15 A. Yes.  
16 Q. Okay. Now, let's look at the third  
17 opinion or third subpart to opinion one.  
18 And what's your opinion there?  
19 A. My opinion is that the Quist analysis uses  
20 an assumed seven-year life for a customer  
21 relationship as of the date of acquisition. And that  
22 may be an approach for financial reporting purposes.  
23 My comment is that it may not be appropriate for a  
24 damage calculation because one would have to consider  
25 the turnover actual expected turnover of those

1 customers not an assumed life for financial purposes.  
2 Q. Now, as part of doing allege valuation  
3 under 141, have you ever attempted to determine an  
4 expected life for a customer?  
5 A. I have, yes.  
6 Q. And how many occasions have you done that?  
7 A. Multiple occasions. I don't know offhand.  
8 Q. What kind of data did you ask for there  
9 your client to perform that analysis, typically you  
10 look at a for a period of time the customers that  
11 existed that started as of a certain date, customers  
12 that have left during a time period and you just  
13 trace that over periods of time?  
14 Q. And did you consider actual attrition data  
15 in arriving at that life?  
16 A. For reporting purposes or?  
17 Q. Yes.  
18 A. It's something that one would consider. I  
19 may not actually been a remaining useful life for  
20 financial reporting purposes.  
21 Q. Okay. Do you consider industry retention  
22 rates for customers in doing that sort of an  
23 analysis?  
24 A. You do because that goes the a market  
25 participant assumption.

1 of the things that one would look at at. It would  
2 have to be under a market participant assumption for  
3 remaining useful life.  
4 Q. How would you ultimately make  
5 determination of a life for a given customer?  
6 A. We don't. Etc. up to management.  
7 Q. Okay. Is there any guidance in literature  
8 for estimating customer lives?  
9 A. Yeah. In FAS 142 there's some discussion  
10 on how one would discriminate remaining useful life.  
11 There is also in evaluating text there's some remain  
12 useful life.  
13 Q. Do you have any idea has the actually life  
14 is for NetQuote's customers?  
15 A. I saw some data that management had  
16 internally indicated that the remaining life for a  
17 national accounts was about three years or eye and a  
18 half years in that local accounts was less.  
19 Q. And what data was that?  
20 A. It was in the document I think related to  
21 a June know apps.  
22 Q. If the life of the customer relationships  
23 is greater than seven years, would that increase the  
24 damages?  
25 A. It would have to depend on the

1 Q. Would you expect a repetitive valuation  
2 firm to consider that information?  
3 A. I would think that they would consider  
4 that as part of your analysis yes.  
5 Q. Do you consider developments in technology  
6 as impacts as has an impact on customer relationships  
7 in doing that analysis?  
8 A. How do you happen in.  
9 Q. Do you consider whether or not technology  
10 is permitting the company to hold onto a customer  
11 longer as part of that analysis?  
12 A. That may be manager that one could would  
13 consider in estimating remaining life.  
14 Q. Would you consider the companies's empty  
15 as relates to retention of customers?  
16 A. You could but again, the concept is market  
17 participant, not specific to an individual entity so  
18 electronics they have market participant would  
19 realize the same remaining useful life, then I think  
20 it would be appropriate, something one would  
21 consider.  
22 Q. But you would consider something other  
23 than straight attrition data in looking at 141  
24 valuation of customers that is correct?  
25 A. Is that correct attrition date is just one

1 contributory charges and the revenue and the  
2 resulting cash flow from that customer. So to  
3 determine whether or not that would bin increase the  
4 damages so there's other things.  
5 Q. Holding all other things constant.  
6 A. Typically the longer the life is. If  
7 there was positive cash throw just mathematically  
8 that would increase the number.  
9 Q. Have you ever conducted an audit of  
10 financial statements into which a results of a 141  
11 valuation were incorporated?  
12 A. I have not done any audit work.  
13 Q. Okay. Do you have any understanding of  
14 has sort of activities what sort of tests an auditor  
15 would do to test assumptions about the customer's  
16 life?  
17 A. Yes, I have some idea of that.  
18 Q. And what would those be?  
19 A. Well, in general, auditors look at,  
20 consider the market participant assumption. So they  
21 look at what other primary indication they hook at  
22 what other similar companies with some more tying  
23 those same customers at that's one consideration.  
24 Q. Would you expect PricewaterhouseCoopers to  
25 have done so in connection with their financial

1 statements?  
2 A. I would think so yes.  
3 Q. Neck they can.  
4 Q. Is there anything else you would have  
5 expected PwC to do in connection with its evaluation  
6 with Quist business valuation report?  
7 A. Oh, there's a lot of things they would  
8 have done.  
9 Q. Provide some examples, please.  
10 A. Sure. Typically they bring in a valuation  
11 specialist themselves as part of the audit team to  
12 review the outside experts report.  
13 Q. So it would be your expectation that PwC  
14 would actually have an expert review that specific  
15 report?  
16 A. That's common yes.  
17 Q. All right. What other things would you  
18 expect?  
19 A. You're it's very general. You mean in  
20 terms of how?  
21 Q. With respect to to customer relationships,  
22 what sort of audit procedures would you expect the  
23 auditors to do in validating the conclusions with  
24 respect to to a value of customer relationships?  
25 A. I've never audited customer relationships

1 standards as an auditor is is permitted to also  
2 conduct a FAS 141 valuation far company?  
3 A.  
4 Q. For a the same company?  
5 A. Are you let me see if I understand your  
6 question. Are you asking if a company auditor that  
7 is auditing their client if they're allowed to do the  
8 valuation? Analyze?  
9 Q. Correct.  
10 A. No they're not.  
11 Q. Why is is that?  
12 A. There's an independence issue.  
13 Q. What did you mean by that?  
14 A. Meaning that they would would be auditing  
15 their own words. They're not allowed to that.  
16 Q. Is there a different standard of  
17 independence for attestation work compared to  
18 valuation work?  
19 A. I'm not sure I follow that question.  
20 Q. That wasn't a very good question.  
21 Attestation attestation?  
22 Q. Do you have any opinion on the reasonable?  
23 A. Of the projections that were used in Quist  
24 as valuation of NetQuote's's relationships.  
25 A. Only in this con ten that for fair value

1 I can tell from you a valuation standpoint you think  
2 some questions that we were typically were asked.  
3 Q. What kind of questions do you get from if  
4 auditor?  
5 A. Typically we we're asked an if projections  
6 whether we tested them, they asked about the  
7 contributory charges to make sure we accurately  
8 consider contributory charges. We asked typically  
9 about how we determine the length of our analysis in  
10 the projection period, our discount rate is usually  
11 they typically ask antibiotic that. How we determine  
12 that and how that rate compares to other rates of  
13 return.  
14 Q. Is it fair to say that you wouldn't accept  
15 expect an auditor just to accept a valuation  
16 performed under FAS 141 without question?  
17 A. My understanding is of SAS 101 they would  
18 have to test that.  
19 Q. Okay. Now, you don't express in your  
20 report a conclusion about what an appropriate useful  
21 life for a customer relationships is do you?  
22 A. No, I do not.  
23 Q. And did you have an opinion on that?  
24 A. No I don't have an opinion of the life.  
25 Q. From the standpoint of professional

1 reporting that under FAS 141 they have to be based on  
2 a market participant assumption.  
3 Q. And what is that opinion?  
4 A. The opinion is that that Mr. Duree should  
5 have considered that in his damage calculation.  
6 Q. So record the clear should have considered  
7 has exactly?  
8 A. Sorry. In my review of Mr. Duree's damage  
9 analyze it doesn't appear that he considered  
10 management projection under 141 have to be prepared  
11 under a market participant assumption. And  
12 therefore, it may be incorrect in a damage  
13 calculation.  
14 Q. Now, in that third subpart to your first  
15 opinion, what are the facts, exhibits, documents that  
16 you relied upon in arriving at that conclusion?  
17 A. Are you referring to C?  
18 Q. Yes.  
19 A. I looked at Mr. Duree' analysis I looked  
20 at the Quist valuation and then again the general  
21 documents that we've been referring to.  
22 Q.  
23 A. And also I looked at the Juno app memo  
24 that had particular significance.  
25 Q.

1 A. And also while I'm thinking about it,  
 2 Mr. Duree's deposition I want to include that's as  
 3 something I consider considered in all of these  
 4 opinions.  
 5 Q. Anything else?  
 6 A. Not offhand, no.  
 7 Q. Do you agree that SAS 73 permits an  
 8 auditor to rely upon the work of an expert under  
 9 certain circumstances?  
 10 A. My understanding of SAS 73 is that an  
 11 outside expert's work product can be relied on as  
 12 audit evidence in estimating -- or in preparing  
 13 financial statements.  
 14 Q. In order to rely upon Quist valuation as  
 15 audit evidence, do you have an understanding of what  
 16 PwC was required to do from a procedure standpoint?  
 17 A. Not -- not having audited -- been an  
 18 auditor, I don't know the exact procedures. I do  
 19 know from a valuation specialist what typically  
 20 happens.  
 21 Q. Okay. And what from your perspective is  
 22 in valuation typically happens?  
 23 A. Well, what typically happens in these  
 24 engagements, again they typically bring in a  
 25 valuation expert as parts of the audit team who

1 A. My understanding of SAS 101, that they  
 2 would have to test management's data.  
 3 Q. And from your perspective in valuation,  
 4 would you expect or would you believe that PwC would  
 5 be required to independently evaluate the conclusions  
 6 that Quist reached in its valuation to determine  
 7 their reasonableness?  
 8 A. What do you mean by that? I'm not  
 9 following you.  
 10 Q. Would you agree that PwC could not rely  
 11 for the Quist report as audit evidence for the value  
 12 of the assets unless it determined that Quist had  
 13 reached a reasonable valuation for those intangible  
 14 assets?  
 15 A. As part of the process that we just we've  
 16 been discussing, yes I would agree with that  
 17 statement.  
 18 Q. Okay. Have you ever used to results of a  
 19 valuation of 141 valuation in your work as an expert  
 20 witness?  
 21 A. I don't think so.  
 22 Q. Let's take a look at?  
 23 (Exhibit-279 was marked for  
 24 identification.)  
 25 Q. (By Ms. Perkins) I'm handing you what's

1 reviews the work product of the management's outside  
 2 expert.  
 3 Q. Does the auditor typically gain an  
 4 understanding of the valuation specialist's  
 5 competence?  
 6 A. Yes that's part of it.  
 7 Q. What about experience?  
 8 A. Yes that's part of it as well.  
 9 Q. Does the does the accounting firms's  
 10 expert doctor methods and a-assumption that were  
 11 applied?  
 12 A. Yes they do.  
 13 Q. And whether those methods and assumption  
 14 were reliable?  
 15 A. Yes.  
 16 Q. So would you agree that auditing standards  
 17 would have required PricewaterhouseCoopers to obtain  
 18 an understanding of Quist's methods and assumption to  
 19 be able to issue an clean opinion?  
 20 A. From my valuation perspective? That's  
 21 seems to be typically the methodology.  
 22 Q. Okay. And from your perspective as a  
 23 doing business valuation, would you agree that Price  
 24 Waterhouse Coopers was required to test the data that  
 25 Quist used?

1 been marked as Exhibit 279.  
 2 And I'll represent that that is excerpts  
 3 from the treatise valuation for financial reporting.  
 4 And did you coauthor this text?  
 5 A. I did, yes.  
 6 Q. Now, taking a look if you would, there are  
 7 page numbers in the upper corners?  
 8 A. Uh-huh.  
 9 Q. On Page 154?  
 10 A. Uh-huh.  
 11 Q. You see part G where it says customer  
 12 relationships?  
 13 A. Yes.  
 14 Q. And what are these steps basically that  
 15 are listed there?  
 16 A. Has this appears to be is a checklist of  
 17 just general information data quest.  
 18 Q. And is this the type of data that you  
 19 would expect someone performing a 141 valuation to  
 20 collect as part of that process?  
 21 A. In general yes.  
 22 Q. And this is actually suggested prom  
 23 program for gathering that information?  
 24 A. That's correct yes.  
 25 Q. Though this is like a practitioner's aide

121

123

1 to arrest property tax first tear no the use in  
2 gather data to perform the valuation?  
3 A. Yeah it's a sample information request.  
4 Q. If a firm performing the type of valuation  
5 followed these procedures and gathered this  
6 information, would you consider the valuation the  
7 customer relationships of to be reliable for  
8 financial statement purposes?  
9 A. This these this is just a checklist of  
10 just general information so it doesn't have anything  
11 to do with methodologies or assumptions, things like  
12 that, so it I don't have enough information to answer  
13 that question.  
14 Q. Okay. Taking, flipping forward a couple  
15 of pages, or further on to Page 156, what is  
16 contained on pages 156 through 159?  
17 A. That's a model audit program from the  
18 AICPA's IPR ^ practice aide.  
19 Q. So this is a program for auditing firm  
20 like PwC to use as a practitioner's aid in coming up  
21 with its audit of evaluation or 141?  
22 A. The AICPA issued a practice aid related  
23 specifically to valuation of in-process research and  
24 development. As part of that practice, they list a  
25 program to help monitors with one would need to look

1 Q. Would you agree that this report was  
2 prepared as NetQuote ordinary operations in financial  
3 reporting obligations?  
4 A. I'm not sure has that means.  
5 Q. Did NetQuote have to prepare this report  
6 or did NetQuote have 0 retain one so someone to prep  
7 in valuation?  
8 A. No. They could have done it internally.  
9 Q. Oh, I see. So was the analysis contained  
10 in this report something that NetQuote had to do as  
11 part of its ordinary accounting function?  
12 A. As part of the acquisition, they would  
13 have to, under FAS 141, list the fair value of the  
14 acquired assets on the balance sheet.  
15 Q. So they had to an analysis to be able to  
16 do that?  
17 A. I would think so, yes.  
18 Q. Okay. Now, you understand that the values  
19 in this report for the intangible assets have been  
20 incorporated by NetQuote into its financial  
21 statements as of the date of this report?  
22 A. I believe that's case, yes.  
23 Q. Okay. Did you talk with anyone a Quist to  
24 determine what procedures they followed in preparing  
25 this report?

122

124

1 at what kind of procedures that they would go through  
2 and its reprinted in this - -the text.  
3 Q. If an auditor followed a model audit  
4 program such as this, would that be from your  
5 perspective in valuation an adequate audit as to a  
6 given 141 valuation?  
7 A. I'm an valuation specialist, so I don't  
8 know. I have no idea.  
9 Q. Since we've been talking about the actual  
10 quit report why don't we taking a look at it. I'm  
11 handing you will has been previously marked as  
12 Exhibit 2 '01.  
13  
14 A. I have it.  
15 Q. And this the report that you were refer  
16 referring to as the allocation of the purchase price  
17 resort?  
18 A. Yes appears to be.  
19 Q. Okay. And Mr. Duree reviewed this as  
20 apart of his work in the case?  
21 A. Yes he appeared to rely heavily on the  
22 report.  
23 Q. And you would agree that this report  
24 wasn't prepared in connection with the litigation?  
25 A. I agree.

1 A. Did I not.  
2 Q. Do you have any experience with Quist?  
3 A. I'm familiar with their name but not a lot  
4 of direct experience, no.  
5 Q. Not a lot direct experience. Do you have  
6 any?  
7 A. Other than that I know name I'm just  
8 familiar from various industry organizations things  
9 like that.  
10 Q. Do you consider Quist to be a reputable  
11 valuation firm?  
12 A. Yes, I do.  
13 Q. Do you consider PwC to be a reputable  
14 accounting firm?  
15 A. I do.  
16 Q. And in Europe experience, does PwC adhere  
17 to an appropriate professional standards in  
18 conducting audits?  
19 A. In my experience yes audits fix fix.  
20 Q. If an auditor performed the kinds of  
21 inquiry that we've been talking about of a FAS 141  
22 analysis, would you consider that to be reliable  
23 audit evidence of a the value of though intangible  
24 assets?  
25 A. I'm not sure I follow that question.

1 customers actually received more than one false  
2 application from Byrd?  
3 A. Oh, I don't know. I assume -- I believe  
4 that some of the of them did actually in review some  
5 of the documents.  
6 Q. And does this mean that a company could  
7 never recover nor type of conduct if the customer  
8 losses were within its normal attrition rate?  
9 MR. ISENBERG: Object to the form.  
10 THE WITNESS: No, no. The point of my  
11 opinion is that within the attrition rate that's  
12 already considered in his analysis, that 159  
13 could possibly be in that normal attrition.  
14 Q. (By Ms. Perkins) So you're not saying  
15 that these 159 didn't actually receiving applications  
16 from Byrd?  
17 A. No. I'm saying that I don't think that  
18 Mr. Duree actually in my review of his deposition his  
19 report actually demonstrated causation of those  
20 specific accounts.  
21 Q. And do you have an opinion as to causation  
22 on those specific accounts?  
23 A. I do not, no.  
24 Q. Now, going back to that opinion No. 2 as I  
25 guess I've come to call it, on has facts and evidence

1 A. Other than just thumbing through some of  
2 the documents to see if it strikes me but no.  
3 Q. I may have you do that during a break but  
4 okay let's turn to your third opinion what is your  
5 third opinion?  
6 A. My third opinion is that I don't agree  
7 with the Mr. Mr. Duree ace methodology in calculating  
8 his damage estimate.  
9 Q. All right. What specifically don't you  
10 agree with?  
11 A. Well there's a number of things. One,  
12 Mr. Duree calculates a multiple of what he pure sorts  
13 to be a value of the customer relationships by  
14 discounting revenue at 25 percent. I don't agree  
15 with the discounting of revenue. I don't agree with  
16 a 25 percent discount rate. I don't agree with the  
17 application of the multiple to start with.  
18 Q. So you don't disagree -- you disagree with  
19 discounting revenue?  
20 A. Yes.  
21 Q. You disagree with the 25 percent discount  
22 rate?  
23 A. Yes.  
24 Q. And what was the third thing?  
25 A. The third thing is the application, how he

1 did you rely to reach that conclusion?  
2 A. I looked at Mr. Duree's report I looked at  
3 highway deposition and I went through his analysis to  
4 estimate which accounts may have been impacted from  
5 Mr. Byrd. I did not find where Mr. Duree specific  
6 specifically said that these accounts were impacted.  
7 He did a visual analysis and some purported  
8 statistical analysis, but he didn't actually point  
9 and said this account left because of this alleged  
10 action.  
11 Q. And you don't have an opinion on whether  
12 or not a given account left because of the action?  
13 A. No. My opinion is Mr. Duree should have  
14 sheen causation.  
15 Q. Okay. Anything else else that you relied  
16 upon in arriving at your conclusion?  
17 A. May have been some of the supporting  
18 documents that I looked through.  
19 Q. Do you recall specifically which  
20 supporting documents those would have been?  
21 A. I don't, not at this point.  
22 Q. Anything else?  
23 A. Nothing that comes to mind.  
24 Q. Is there anything else that you could look  
25 at to refresh your recollection on that?

1 applies a multiple to come up with a conclusion of  
2 value of customer relationships.  
3 Q. Okay. With respect to discounting  
4 revenue, what do you mean? What do you mean that he  
5 did that you objected to?  
6 A. He calculates value of customer of the  
7 entire customer relationship by discounting revenue.  
8 He doesn't takes into consideration expenses,  
9 contributory charges, or the actual cash flow that  
10 those customers generate.  
11 Q. Does Mr. Duree actually state in his  
12 report that the entire value -- entire value of the  
13 relationship the discount revenue flow?  
14 A. Actually he doesn't. He skips over that.  
15 But if you follow his logic, that's what he's  
16 implying, that's the value of the entire customer  
17 relationships.  
18 Q. Well, didn't Duree actually state in his  
19 report that the discounted revenue stream associated  
20 with the customers total the \$123 million?  
21 A. Yeah. He calls it a calculation, I  
22 believe.  
23 Q. Okay. And is that the same discounted  
24 revenue stream the same thing as the value of a  
25 relationship?

1 A. Yes. Inherently he's calculating the  
2 value of the entire customer relationships through  
3 how he use that's calculation.  
4 Q. Why is that?  
5 A. Well what he does is he discounts the  
6 total revenue attributed to a customer relationships  
7 from the Quist valuing, discounts it at 25 percent,  
8 comes up with a number. He applies that number in  
9 and compares it to revenue as of the date of the  
10 Quist valuation and comes up with a multiple of 3.2.  
11 He then applies the multiple of 3.2 to his  
12 calculation of the 159 lost customers to estimate  
13 what the value of the loss of those customers are,  
14 his conclusion of value.  
15 Q. Okay. But is that the same as concluding  
16 that the total of the entire value of the customer  
17 relationship is the \$123 million or is that the value  
18 of the revenue stream?  
19 A. Well if you follow logic and if he  
20 conclusion value of loss of customer by fly that  
21 pulling that multiple how he calculates that multiple  
22 of has to be a valuation of the entire customer list.  
23 It's logic.  
24 Q. Now, a little further on in your report on  
25 page 13 it appears that you take issue with Mr. Duree

1 different I if we're looking at NetQuote's's actual  
2 experience and how it was damaged, can you identify  
3 any employee salaries that are saved as a result of  
4 the loss of these customers?  
5 MR. ISENBERG: Object to the form.  
6 THE WITNESS: No. I I didn't that's not  
7 my opinion.  
8 Q. (By [1]Ms. Perkins) Okay and can you  
9 identify any operating expenses that it saved as a  
10 result of losing these 159 customers?  
11 A. No. Again, that's not my opinion.  
12 Q. Okay. Now, hypothetically, let's say that  
13 NetQuote were to be awarded the amount that is set  
14 forth in Duree's report for customer relationship  
15 losses. Would that recovery be taxable as income?  
16 A. I don't know specifically.  
17 Q. Okay. Are customers always -- is the  
18 addition of a customer always going to increase the  
19 company's incremental costs?  
20 A. That's a hypothetical question. I depends  
21 to understand facts and circumstances.  
22 Q. So there a situation in which a company  
23 could add a customer without adding inchemical costs  
24 hypothetically?  
25 A. Again I can't recall of any specific but

1 not including what you call contributory charges; is  
2 that correct?  
3 A. That's correct yes.  
4 Q. Assuming that a 159 customers were  
5 actually loss as a result of Byrd's malicious  
6 applications what cost savings is NetQuote realize as  
7 a result of losing these customers?  
8 A. I don't know if they realized any cost  
9 savings. My opinion is that in if one were to  
10 discount revenues, there are costs associated  
11 additional costs with achieving those revenues.  
12 Q. And a 159 customers is less than one  
13 percent of NetQuote's customer base, correct?  
14 A. I believe that to be the case, yes.  
15 Q. Okay. And so can you identify specific  
16 costs that NetQuote would have saved by losing those  
17 customers?  
18 A. Again I'm not quantifying cost savings.  
19 What my opinion is that you can't making an  
20 assumption that we're going to get checks revenue  
21 from customers without also appropriately including  
22 expenses associated with generating those revenues.  
23 Also with other assets that assist in generating  
24 those revenues.  
25 Q. Well so let me ask the question little bit

1 again that's not my opinion.  
2 Q. Is it ever acceptable in your opinion not  
3 to deduct contributory charges had you're doing an  
4 analysis such as the one Andrew performed here?  
5 A. There may be certain circumstances but I  
6 don't think of any as I sit here today.  
7 Q. Turning to the discount rate that you  
8 identified, the 25 percent, what relationship or what  
9 is a discount rate reflect in the aunts of the value  
10 of a customer's relationship?  
11 A. The discount rate would reflect the risk  
12 of actually achieving cash flows generated by those  
13 particular customers.  
14 Q. So in laymen's term would a discount rate  
15 be sort of handle capping the revenue stream?  
16 A. I wouldn't term it as handicapping. What  
17 it does is it quantifies risk of actually achieving  
18 projected cash flows.  
19 Q. So is it in simplistic terms a fair  
20 relationship to say the higher the discount rate the  
21 lower the probability of achieving whatever the  
22 projected revenue is?  
23 A. The greater the risk, the lower the value.  
24 Q. Okay. Have you ever previously selected a  
25 discount rate in your work in valuation for customer

1 relationships?  
2 A. Have I -- I'm sorry can you rephrase that?  
3 Q. Sure have you in performing busy valuation  
4 selected a discount rate to allay in customer  
5 relationships?  
6 A. Yes, I have.  
7 Q. And has have you considered in doing that?  
8 A. Considered the weighted average cost of  
9 capital of the entire company. I considered what  
10 other assets were contributing to a generate  
11 radiation of those particular cash flows an I  
12 considered rates relative rates of return on those  
13 other assets.  
14 Q. Anything else?  
15 A. Well, there's market based data that all  
16 enters into that.  
17 Q. Such as what?  
18 A. Well in calculating the weighted average  
19 cost of capital it's typically for from market  
20 derived data.  
21 Q. Do you consider the life hood of the  
22 customer remaining with the company in the discount  
23 rate?  
24 A. That's part of the risk of actually  
25 achieving those cash flows, so yes.

1 Q. Do you have any opinion as to has an  
2 appropriate discount rate would be here?  
3 A. Not specifically New York City.  
4 Q. Okay. And if hypothetically you were to  
5 do an analyze and determine that a 15 percent  
6 discount rate were more appropriate, all other  
7 factors staying equal that would that result in  
8 higher amount of damages?  
9 A. Hypothetically 15? Well given the  
10 relative first of all given the relative nature  
11 weighted average cost of tax and after tax cash flows  
12 an we're talking about pretax revenue it wouldn't be  
13 lower the discount rate would not be lower. But if  
14 you gnatically if it were lower it would result in  
15 higher value.  
16 Q. Okay. Have you ever done a damages  
17 analysis on behalf of a plaintiff in your work as an  
18 expert? I mean not as a party. On behalf of the  
19 side who is trying collect the damages as opposed to  
20 a rebuttal?  
21 A. Yeah Atomic Fusion I believe. D D the  
22 Department of Transportation.  
23 Q. Did you have a methodology that you  
24 applied in the aye to come I am I'm sorry are you  
25 finished?

1 Q. In a 25 percent rate reflective of a  
2 greater discount than just a cost of money for year?  
3 A. I'm not sure what that means.  
4 Q. Well, is there just -- backup.  
5 What is the weighted average cost of  
6 capital?  
7 A. Weighted average cost of capital is a  
8 weight of of total sources of capital on an after tax  
9 basis that the capital that contributes to a company  
10 required rate of return on capital. Usually it's  
11 made up of after tax cost of department and return on  
12 equity weight of the relative weightings.  
13 Q. Do you know what NetQuote's average cost  
14 of weight was in this time frame?  
15 A. Quist calculated it at 25 percent I  
16 believe.  
17 Q. Now, you're assuming correct that a  
18 25 percent discount rate is not sufficiently high; is  
19 that correct?  
20 A. No. What my opinion is is that given  
21 Quist's calculation of a weighted average cost of  
22 capital, is based on after tax cash flows that it  
23 would be inappropriate to apply it to a revenue  
24 stream that is pretax without inclusion of any  
25 expenses in contributory charges.

1 A. I am yes.  
2 Q. I'm sorry. Did you have a methodology  
3 that you applied in the Atomic Fusion case to come up  
4 with a damages calculation?  
5 A. We -- yes, we did.  
6 Q. And what was that?  
7 A. Well, if that particular case the company  
8 eventually went public. So we traced the amount of  
9 shares that Atomic Fusion should have received and we  
10 just traced it as the company was bought and became a  
11 public company.  
12 Q. Okay. What about in the Department of  
13 Transportation matter?  
14 A. In that particular matter, it involved a  
15 sports complex. We looked at the valuation work done  
16 by another expert and we commented on rates return  
17 that were utilized in that particular matter.  
18 Q. If NetQuote had retained you to do an  
19 analysis of its damages here what methodology would  
20 you have applied?  
21 A. D D.  
22 A. What I would have considered is first an  
23 unfortunately I would have look at the individual  
24 customers to see if I could establish some sort of  
25 caution to be customers first of all.

1 Q. What would you have looked at there?  
2 A. Likely have seen if management had any  
3 additional data of why he left the firm and no longer  
4 became customers.  
5 Q. So is this in regard to what Mr. Mr. Duree  
6 considered?  
7 A. I believe that would be a case, yes.  
8 Q. I see. Would you have considered the  
9 account data that the Mr. Duree considered as well?  
10 A. I would have likely approached it  
11 differently than Mr. Duree.  
12 Q. How would you you have approached it?  
13 A. Well, his report and his deposition looks  
14 like he just did a visual inspection an just made his  
15 open judgment of why which accounts were affected. I  
16 would have actually taken it a step further to milk  
17 sure is that they were actually affected.  
18 Q. How old you have done that?  
19 A. Talked to management, see in what internal  
20 management have management talk the a customers  
21 possibly.  
22 Q. Anything else?  
23 A. In terms of establishing causation?  
24 Q. Yes.  
25 A. Just explored with management, you know,

1 I left because of this action.  
2 Q. So if a customer didn't say hey yeah I  
3 left because of this action then you would consider  
4 that customer not to be included within the possible  
5 damages group?  
6 A. Well it's one thing I would are  
7 considered. There may have been other things to  
8 consider. But in establishing causation I would look  
9 at some direct relationship from the alleged action.  
10 Q.  
11 A. To why a customer left.  
12 Q. Would you have considered the number of  
13 applications that a customer got, number arrest  
14 malicious applications that a customer received?  
15 A. I certainly would have probably considered  
16 that, yes.  
17 Q. Okay. And would you have considered the  
18 timing of the customer terminating its relationship  
19 relative to receiving those applications?  
20 A. I would. And I would have tried to  
21 confirm that even though it looked like that that may  
22 have been a result of the action, maybe confirmed  
23 that.  
24 Q. And confirmation would be through  
25 discussions with management?

1 the reasons for leaving.  
2 Q. Why a given customer might have left?  
3 A. That's correct. Yeah looked at historical  
4 reasons possibly that customer have left, things like  
5 that.  
6 Q. And assuming that did you that and reached  
7 some conclusions as to causation based on your  
8 analysis what would you have done to quantify?  
9 A. I would have had it working with  
10 management tried to estimate the cash flow that  
11 result that would have resulted from those customers  
12 but for the alleged action of the in the damage  
13 claim.  
14 Q. And how would you have done that?  
15 A. Similar methodology that the Quist used in  
16 their allocation of purchase price.  
17 Q. Meaning you would have gotten projections  
18 from management on what sort or expected sales and  
19 attrition for those customers?  
20 A. Yes, for the customers that I could  
21 determine there was some causation, yes.  
22 Q. Okay. How will ultimately would you have  
23 determined if a customer if there was causation how  
24 old you have made that determination?  
25 A. If there were some evidence that said yeah

1 A. Well, management if they had any  
2 additional information they had feed book from the  
3 customers. If there was some abnormal nationality  
4 possibly interview the customers themselves.  
5 Q. Now, going back to the themselves putting  
6 a number on a piece of it, so I think you said that  
7 you would estimate is cash flow that would have  
8 resulted from that customer using methodology similar  
9 to that applied by Quist in its report?  
10 A. I would have considered that, yes. The  
11 value of the loss lost customers in the cash flow  
12 that they would have generated but for an action and  
13 the methodology a common methodologies is similar to  
14 what Quist used in their estimate of the value of the  
15 customer relationships and the purchase price  
16 allocation.  
17 Q. In what other steps would you have taken?  
18 A. And and and.  
19 A. Well I would have established a discount  
20 rate that is commensurate with a risk of those  
21 customers.  
22 Q. Okay. How old you have gone about doing  
23 that?  
24 A. I would have looked at the weighted  
25 average cost of capital. I would have possibly

1 looked at what other assets or I would definitely  
 2 look add has other assets contribute though that and  
 3 looked at required rates of return on those other  
 4 assets and made sure that it all fit within the  
 5 weighted average cost of capital.  
 6 Q. How old you will determined fit fit within  
 7 tuberculosis weight?  
 8 A. Well, if you think about in terms of  
 9 balance sheet on the right hand side of the balance  
 10 sheet the required return on the a modified balance  
 11 sheet would be the weighted average of cost because  
 12 you have debt and equity. Algebraically since the  
 13 balance sheet balances, the weighted average return  
 14 on assets would have to equal or approximate the  
 15 weighted averaged cost of capital. That's one way  
 16 valuation analysts look to see if the required rates  
 17 of return on intangible assets makes sense.  
 18 Q. Anything else?  
 19 A. No.  
 20 Q. And can you think of any other steps that  
 21 you would have a taken to conduct such a damages  
 22 amortized had you been returned by Netquote?  
 23 A. Well in general in refining what Mr. Duree  
 24 did, that's the approach I would have likely taken.  
 25 Q. Okay. But?

1 about valuing stock options in order to report  
 2 compensation to employees. Is this a report that  
 3 would be prepared as parts of that obligation?  
 4 A. Yeah. Typical 409 A valuation is  
 5 estimating fair market value of equity on a per  
 6 ^ pers year basis for granting options.  
 7 Q. Okay. And then you use that to determine  
 8 your stock option compensation expense; is that  
 9 correct?  
 10 A. For tax reporting purposes.  
 11 Q. For tax reporting.  
 12 A. Yes.  
 13 Q. Getting back to financial statements  
 14 generally, has are financial statements used for?  
 15 A. Well, a variety of things. Primarily  
 16 financial statements are used by management to gauge  
 17 the financial condition an operating performance of a  
 18 company. It's also utilized by investors and lenders  
 19 in that particular company as well.  
 20 Q. So in a case of a public company, would  
 21 members of the public be relying upon financial  
 22 statements potentially in making investment  
 23 decisions?  
 24 A. Potentially, yes.  
 25 Q. And in a context of a private company

1 A. But there may be others; I don't know.  
 2 Q. I'm going to hand you what's has been  
 3 previously marked as Exhibit 202. Do you recognize  
 4 that document?  
 5 A. I do, yes.  
 6 Q. Was what is this document?  
 7 A. This is a valuation another valuation  
 8 prepared by Quist valuation on the common stock of  
 9 NetQuote holdings as of February 20th antibiotic  
 10 action 2007.  
 11 Q. Did you rely on this report in forming  
 12 your opinions?  
 13 A. I looked through the report but I did not  
 14 use as a direct relationship.  
 15 Q. Why not?  
 16 A. Because it didn't have information that I  
 17 needed to form my opinion.  
 18 Q. Okay. What is the purpose or what do you  
 19 understand to be purpose of this report?  
 20 A. I believe it's for tax reporting purposes  
 21 under Section 409 A.  
 22 Q. And would that be for reporting of  
 23 employee compensation?  
 24 A. Yes. It would.  
 25 Q. Okay. So there we talked about earlier

1 would a private company use its financial statements  
 2 for for example to go the a bank to get a loan?  
 3 A. That could be one reasonable, yes.  
 4 Q. Okay. So it's fair to say that third  
 5 parties outside of a company in addition to  
 6 management might rely for those financial statements?  
 7 A. Yes they do.  
 8 Q. And is it fair to say that part of the  
 9 reasonable for auditing financial statements is to  
 10 determine that they fairly state the operating  
 11 results of a company?  
 12 A. According to general little accepted  
 13 accounting principles yes.  
 14 Q. I can't recite the standard.  
 15 And generally speaking though do you think  
 16 that members of you know say lending community are  
 17 going to be they're entitle to rely opinion financial  
 18 statements?  
 19 A. I believe generally that's the case, yes.  
 20 Particularly those that are audited, when you add  
 21 that.  
 22 Q. And certainly something audited by big  
 23 four accounting firm?  
 24 A. Yes that's correct.  
 25 Q. Are you aware that Mr. Byrd submitted

153

1 it's often used as a basis for an amortization of  
2 that particular asset.  
3 Q. You were asked a series of hypothetical  
4 questions about what you would have done if you were  
5 retained by NetQuote in this matter. Would you have  
6 used the remaining useful life from if Quist report  
7 as the basis for calculating customer relationship  
8 values?  
9 A. Probably not. I probably -- I would have  
10 looked at the actual experience of the company.  
11 Q. Is management experience relevant to a  
12 validity of management's projections as it relates to  
13 the use by the valuation company?  
14 A. Management's experience in the industry an  
15 also preparing projections would be something that  
16 one would consider in testing the projections.  
17 Q. The alternative damage calculation was  
18 just discussed a minute ago, does that take into  
19 account charges or costs of generating revenue?  
20 A. It does. It takes into into account  
21 expenses because it's based on has Quist actually  
22 did.  
23 Q. Do you have any criticism of the Quist  
24 allocation of purchase price report?  
25 A. No, I do not.

154

1 Q. So what is the relevance of that report as  
2 it relates to your opinion about Mr. Duree's opinion?  
3 A. I'm not search about that question.  
4 Q. Okay. Concern certain certain certain  
5 certain certain certain certain certain?  
6 Q. I'm not certain fix fix)?  
7 Q. Is the your opinion that Mr. Duree  
8 inappropriately used the allocation of purchase price  
9 report?  
10 A. Yes it's my opinion has he made -- he  
11 utilized it in an incorrect manner.  
12 Q.  
13 MR. ISENBERG: I don't have any more  
14 questions.  
15 MR. WILLIAMS: I don't have any questions.  
16 MS. PERKINS: I don't have anything  
17 further.  
18 VIDEOGRAPHER: This concludes the  
19 deposition. It's 2:16 p.m. and tape No. 4.  
20 (The reading and signing of the deposition  
21 by the witness was reserved.)  
22  
23  
24  
25
