Re: In Re Seroquel Products Liability Litigation: MDL-1769

Dear Jonathan:

Pursuant to our notice last week, we have enclosed two portable hard drives and one compact disk containing documents for AstraZeneca's fifteenth Custodian production in the above referenced matter. In particular, this production contains documents belonging to two custodians of Group 2 (contained on the compact disk), and documents from the eleven remaining custodians of Group 2. In addition, we have provided you a separate hard drive with 655 documents designated as our CANDA-CRF Production.

Consistent with our agreement on bates labeling, you will find all load files, text files and DAT files utilize the bates labeling convention of "AZSER0000." As we discussed last week, this production was already in process when these changes were made. Consequently, the bates stamp on the individual documents reveals a bates labeling convention of AZ/SER 00000. We will follow this convention in all future productions. Please let us know if we can correct any issues this may cause with this production.

Similar to our most recent productions, the large size of the remaining Group 2 Production demands the Custodians be set forth in multiple folders and corresponding sets. For your convenience, I have listed the Custodians according to their sets with corresponding bates numbers. The contents of the sets and the corresponding bates ranges are:
