 1  APPEARANCES (continued):

 2  For the Defendant     COVINGTON & BURLING, LLP
                          BY:  ROBERT T. HASLAM, ESQ., and
 3                        CHRISTINE S. HASKETT, ESQ.
                          333 Twin Dolphin Drive - Suite 700
 4                        Redwood Shores, California  94065

 5          (Call to order of the Court)

 6          THE COURT:  Okay.  Good morning.

 7          The case before the Court is Motorola versus Apple,

 8  10-23580.

 9          Who's here for Motorola?

10          MR. MULLINS:  Your Honor, Ed Mullins from Astigarraga

11  Davis, local counsel.  I'm here with lead counsel who will

12  introduce themselves.

13          MR. PERLSON:  Good morning, Your Honor.  David

14  Perlson from Quinn Emmanuel.  I'm here with Tony Pastor and

15  John Duchemin.

16          THE COURT:  Okay.  Thanks.

17          MR. MULLINS:  And, Your Honor, our client is here as

18  well Motorola?

19          THE COURT:  You're Motorola?

20          MR. PLUTA:  Robert Pluta.

21          THE COURT:  Okay.  Fine.

22          And who's here for Apple?

23          MR. POWERS:  Good morning, Your Honor.  Matt Powers,

24  Bob Haslam, Christine Haskett, Jessica Guya, Chris Pace, Jill

25  Ho for Apple, and also Wendy Anna Herby from Apple but is not
```

1 automatically to the list of approved displays, if you will,

2 that that computer could recognize.

3   So, what would what that in here -- we have a short

4 animation of it -- is that you would plug in your new monitor

5 where you wanted to send the information, and the CPU on the

6 computer would look at it and say, well, all right, I still

7 don't see it because it hasn't been added to my list of active

8 displays, because the technology didn't permit that to happen

9 automatically.

10   So, in order to actually add that new monitor, what

11 you had to do was either put your computer to sleep or restart

12 it. If you restarted it, it would then look again to see what

13 displays were connected to it, and you'd have to restart it

14 and wait and wait and wait. And then it would finally

15 restart, and it would go out and look at what displays were

16 connected to it, and your new display would now be found. But

17 had you to wait throughout that whole reboot process, which I

18 think we've all endured quite too often. That's one of the

19 problems that this patent is directed at solving.

20   Now, the invention is -- a colloquial expression

21 that's often used is "plug and play," which just means exactly

22 what it sounds like. You don't have to wait for it to be

23 rebooted. The system will recognize it automatically without

24 being rebooted or restarted. And, so, we've done a very short

25 animation here to show that conceptually. And then, however

1   you've set it up -- it can be set up for mirroring, it can be

2   set up for anything else -- the information that you want to

3   display on your second monitor will be displayed without

4   rebooting.

5   All right. So, now, what's the accused functionality

6   here? Again, we've put up as an example, the Motorola Xoom

7   tablet, which is their iPad-like device, and their machine

8   works exactly how we were describing it with regard to the

9   patent. They have a computer on board that Xoom tablet. It's

10 really just a small, sleek computer. And when you try to plug

11 it into a monitor through an HDMI cable, when you do so, it's

12 automatically recognized. You don't have to restart it. It

13 sees the other display and it will automatically launch the

14 display to go into that external monitor. And it's that use

15 of that technology that we think infringes the claims, and

16 we'll talk about the specific claim language, obviously, in

17 much more detail when we're around next week.

18   Now, one issue which has been addressed by Motorola

19 in both of its claim constructions and in its slides to some

20 degree to be shown to Your Honor today is this concept of

21 what's an operating system. And you'll recall that one of

22 their proposed constructions has the term "operating system

23 component," and, so, I wanted to touch on that briefly.

24   I've got on the screen a slide that shows a public

25 version distributed by Google of what the Android operating

1 out which of the terms within each of the patents makes sense

2 to prove logically and we have an efficient way of doing it.

3   THE COURT: All right. Thank you.

4   MR. PERLSON: All right. Thank you so much for

5 taking this time.

6   THE COURT: I hope those of you from California are

7 not taking the red eye tonight.

8   MR. PASTOR: I think we'll be all right.

9   THE COURT: Well, have a safe trip back. Thank you.

10   (Adjourned at 6:00 p.m.)
