Doc. 366 Att. 10

#### **UNITED STATES PATENT NO. 7,024,183**

## PRELIMINARY INFRINGEMENT CONTENTIONS<sup>1</sup>

Accused Apple Products: Apple's iPhone line of products running Apple iOS 5 and later, including at least the iPhone 3GS, iPhone 4, iPhone 4S, and iPhone  $5^2$ .

Apple directly infringes the '183 patent, either literally or through the doctrine of equivalents, pursuant to 35 U.S.C. § 271(a).

In addition to Apple's direct infringement of the '183 patent through its development, testing, use, distribution and sale of its products and services, Apple also indirectly infringes the '183 patent pursuant to 35 U.S.C. § 271(b) and (c). End-users and others in the distribution channel of the Accused Apple Products directly infringe this claim by using, selling, offering for sale, and/or importing these devices into the United States. Apple contributes to and induces the infringement of the asserted claims through its promotion and provision of marketing, sale and/or technical support of the Accused Apple Products and associated services in the United States, and through the design, marketing, manufacture, sale, and/or technical support of the Accused Apple Products. Apple supplies Accused Apple Products and actively encourages the use, sale, offer for sale, and importation of the same in the United States through the promotion and provision of marketing literature, promotion, and user guides, which induces and results in direct infringement. Apple has known or should have known that these actions would cause direct infringement of the '183 patent and did so with specific intent to encourage direct infringement, at least as of April 13, 2012, Motorola served Apple with Motorola's motion for leave to file Motorola's first amended complaint in this litigation, which attached the '183 patent as an exhibit. Despite knowing of the '072 patent, Apple continues to make, use, offer to sell, and sell its products and has continued to circulate marketing literature

\_

Motorola Mobility's investigation is ongoing and discovery is not yet complete. Apple has, thus far, not produced all of its documents and source code relevant to the accused methods and products. Motorola reserves the right to supplement or amend these contentions based on subsequent discovery or disclosures made pursuant to FRCP 26. Motorola further reserves the right to amend and supplement its contentions with respect to any products released by Apple subsequent to the service of these initial infringement contentions, in accordance with the schedule set forth in the Court's Order of October 25, 2012. Further, to the extent Apple releases any new products with the same functionality accused of infringement in the Accused Apple Products in these contentions, Motorola reserves the right to seek appropriate relief from the court in accordance with its order of October 25, 2012 and in accordance with the Federal Rules of Civil Procedure.

<sup>&</sup>lt;sup>2</sup> The term "Apple iPhone 5" means Apple's new iPhone announced by Apple on September 12, 2012. *See* http://www.apple.com/pr/library/2012/09/12Apple-Introduces-iPhone-5.html.

and user guides encouraging users of the Accused Apple Products to infringe. Additionally, the identified features of the Accused Apple Products are material parts of the inventions of the asserted claims and have no substantial non-infringing uses.

'183 Patent Claim	Representative Apple Products: Apple iPhone <sup>3</sup>
Claim 1	
1. A method for intelligent communication management within a communication device comprising the steps of:	Upon information and belief, an "Apple iPhone" (i.e., an Apple iPhone product running Apple iOS 5 or later, as defined above) is a communication device having intelligent communication management. For instance, an Apple iPhone can send messages using Apple's "iMessage" service, but when iMessage is off or unavailable, can send such messages using an SMS/MMS service. Similarly, for example, a text message that cannot be sent to a phone number may be sent to an email address.  See generally Apple iPhone User Guide For iOS 6 Software, ("iPhone User Guide"), available at <a href="http://manuals.info.apple.com/en/iphone user guide.pdf">http://manuals.info.apple.com/en/iphone user guide.pdf</a> , and produced at MOTO-SDFL-0000016133, at Chap. 9 (pp. 64-66).
	See id. at 64:

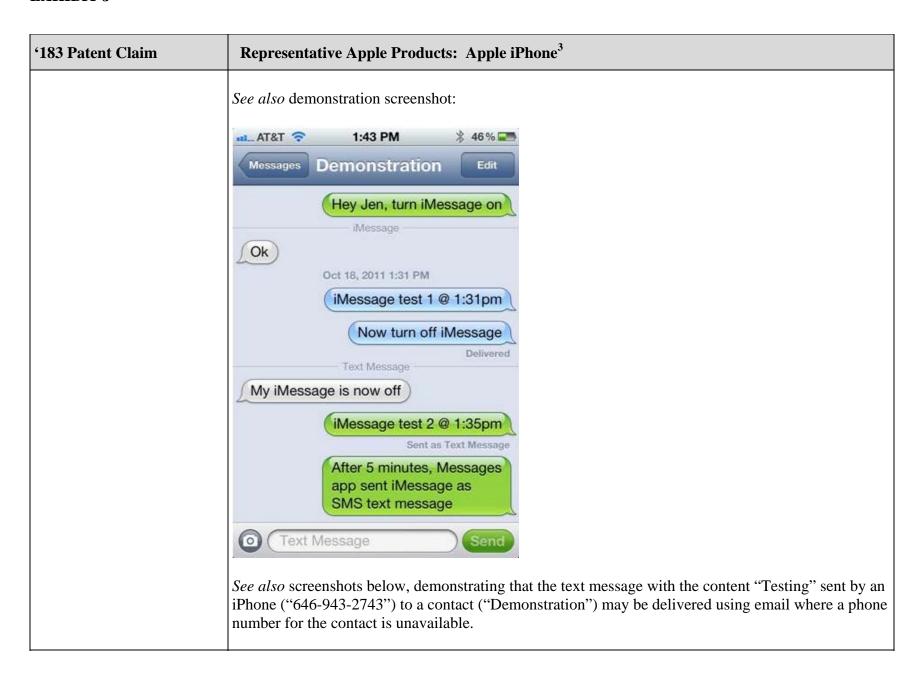

\_

<sup>&</sup>lt;sup>3</sup> This chart provides Motorola's infringement analysis for the Accused Apple Products. Upon information and belief, the analysis set forth in this chart applies equally to all of the Accused Apple Products. In this claim chart, "Apple iPhone" refers to Apple's iPhone line of products running Apple iOS 5 and later, including at least the iPhone 3GS, iPhone 4, iPhone 4S, and iPhone 5.

'183 Patent Claim	Representative Apple Products: Apple iPhone <sup>3</sup>
	Sending and receiving messages
	WARNING: For important information about avoiding distraction while driving, see Important safety information on page 146.
	Messages lets you exchange text messages with other SMS and MMS devices via your cellular connection, and with other iOS devices using iMessage.
	iMessage is an Apple service that lets you send unlimited messages over Wi-Fi (as well as cellular connections) to other iOS and OS X Mountain Lion users. With iMessage, you can see when other people are typing, and let them know when you've read their messages. iMessages are displayed on all of your iOS devices logged in to the same account, so you can start a conversation on one of your devices, and continue it on another device. iMessages are encrypted for security.
	See also, e.g., <a href="http://www.apple.com/ios/messages/">http://www.apple.com/ios/messages/</a> (MOTO-SDFL-0000018793):

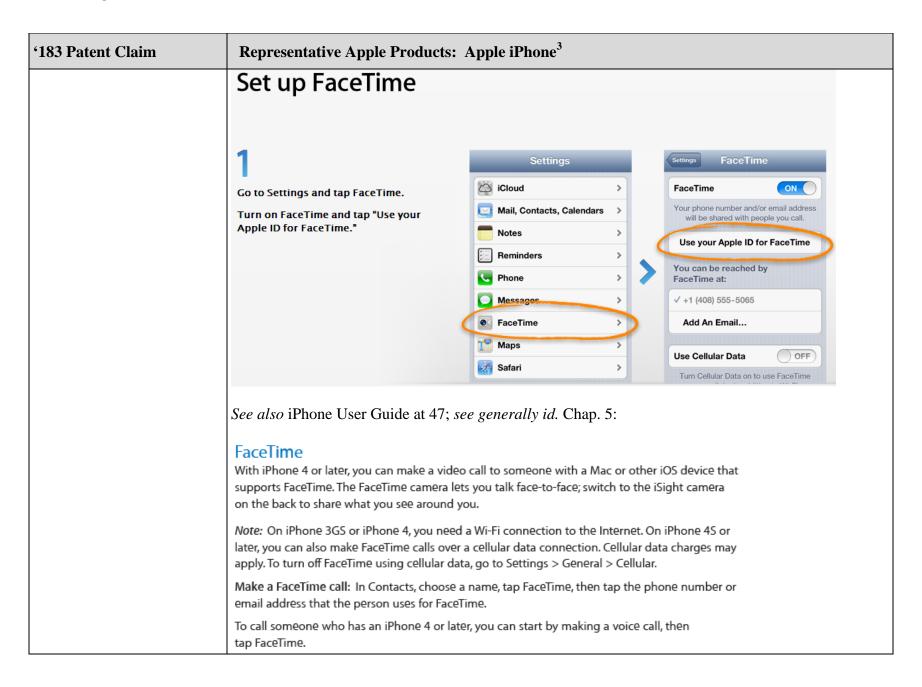

'183 Patent Claim	Representative Apple Products: Apple iPhone <sup>3</sup>
	Messages Unlimited texting. Unlimited fun.
	If you're a texter, you'll love Messages on iPhone, iPad, and iPod touch. Now they all come with iMessage, a service that's an even better kind of texting.  Because it's free for you and anyone texting over Wi-Fi using an iOS device or Mac with iMessage. And it's unlimited.*  So say as much as you want.  * * *
	Exchange words. Or photos. Or videos.
	iMessage lets you send messages back and forth with anyone on iPad, iPhone, iPod touch, or a Mac running Mountain Lion. Send photos, videos, locations, and contacts, too. If you have more than one Apple device, iMessage keeps the conversation going across all of them. And you can text and send photos and videos via MMS to other mobile phones over cellular networks. Even ask Siri to text for you. Just say "Tell Peter I'm on my way" and Siri writes your message and fires it off.  * * *

'183 Patent Claim	Representative Apple Products: Apple iPhone <sup>3</sup>
	Blue is best.  On IPhone, when your text bubble is blue instead of green, you'll know you're using IMessage instead of SMS. You'll know that you can get a quicker response. You'll know that the text session is free. You'll know it's been sent to all your recipients' Apple devices. And you'll know they received the text. SMS texters will be green with envy.  Looks like fun! I'm glad you're immersing yourself in the culture.  Looks like fun! I'm glad you're immersing yourself in the culture.  Looks like fun! I'm glad you're immersing yourself in the culture.  Looks like fun! I'm glad you're immersing yourself in the culture.  Looks like fun! I'm glad you're immersing yourself in the culture.
	* * *  *Messages may be sent as SMS when iMessage is unavailable; carrier messaging fees apply.
	See also iPhone User Guide at 64:  An alert badge (i) appears if a message can't be sent. Tap the alert in a conversation to try sending the message again. Double-tap to send the message as an SMS text message.

'183 Patent Claim	Representative Apple Products: Apple iPhone <sup>3</sup>
	cellular connection.
	See, e.g., <a href="http://www.apple.com/ios/facetime/">http://www.apple.com/ios/facetime/</a> :
	FaceTime Be in two places at once.
	Hang with friends in one city. Visit family in another. Make that important meeting. While you're catching the game at the ballpark. With a tap, you can make video calls over Wi-Fi from your iPhone, iPad, iPod touch, or Mac to someone else's. You can even make FaceTime calls over cellular networks on iPhone or iPad.* And be there in person, even when you're not.

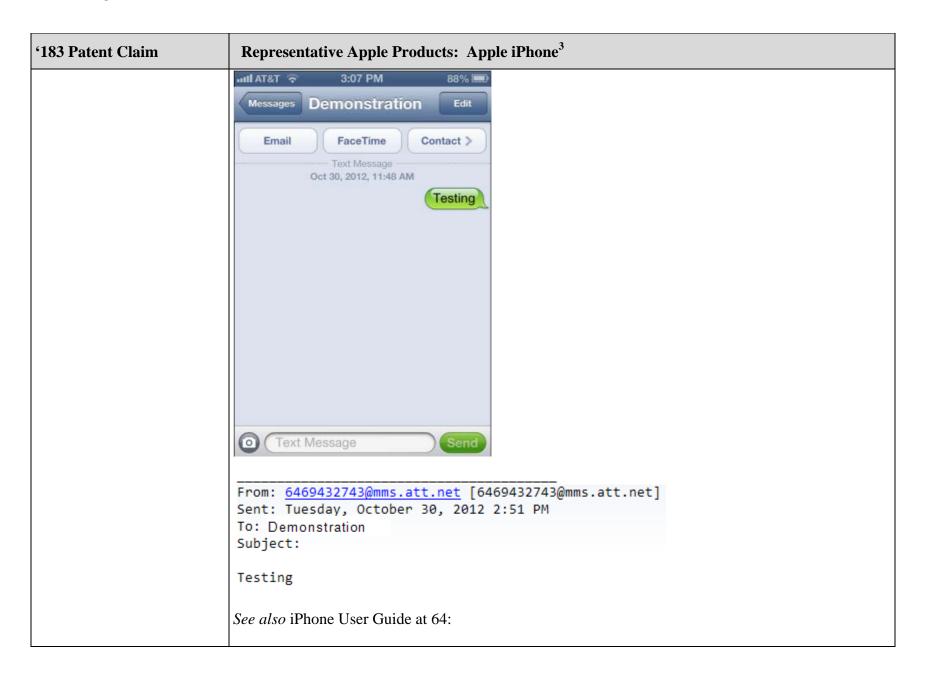

'183 Patent Claim	Representative Apple Products: Apple iPhone <sup>3</sup>
	Drag your image to any corner.  Mute (you can hear and see; the caller can see but not hear).  The FaceTime screen showing the person called, with an inset in the lower left corner showing the caller's face. Three buttons along the bottom, from left to right, let you mute the call, and switch cameras.
	Use Siri or Voice Control: Press and hold the Home button □, then say "FaceTime," followed by the name of the person to call.
	Set FaceTime options: Go to Settings > FaceTime to:
	Turn FaceTime on or off
	Specify your Apple ID or an email address for receiving FaceTime calls
	See also <a href="http://support.apple.com/kb/ht4319">http://support.apple.com/kb/ht4319</a> (last accessed September 1, 2012, and produced at MOTO-SDFL-0000018842):

'183 Patent Claim	Representative Apple Products: Apple iPhone <sup>3</sup>
	What information do I need to call someone using FaceTime?
	To call someone using FaceTime, you need their phone number or email address. Which one you use is determined by the device you are calling:
	When calling someone using an iPhone 4 or later: Try the phone number of the person you are calling first. If the person has registered an email with FaceTime, you can use that as well.
	When calling someone using an iPad 2 or later, iPod touch (4th generation), or FaceTime for Mac: Use the email address designated for FaceTime of the person you are calling.
	On iPad, iPod touch, and FaceTime for Mac, you need to add a person as a contact using the FaceTime or Contacts app before you can call them.
storing a communication preference identifying one or more communication means	Upon information and belief, an Apple iPhone stores a communication preference identifying one or more communication means for sequentially initiating communication with the contact.
for sequentially initiating communication with the contact,	For example, upon information and belief, the memory of an Apple iPhone stores a communication preference identifying that, when iMessage (e.g., using an Apple ID, email address, or phone number) is unavailable, communication with the contact should be initiated by SMS text message (e.g., using a phone number or email address) (i.e., in that sequential order).
	See iPhone User Guide at 64:

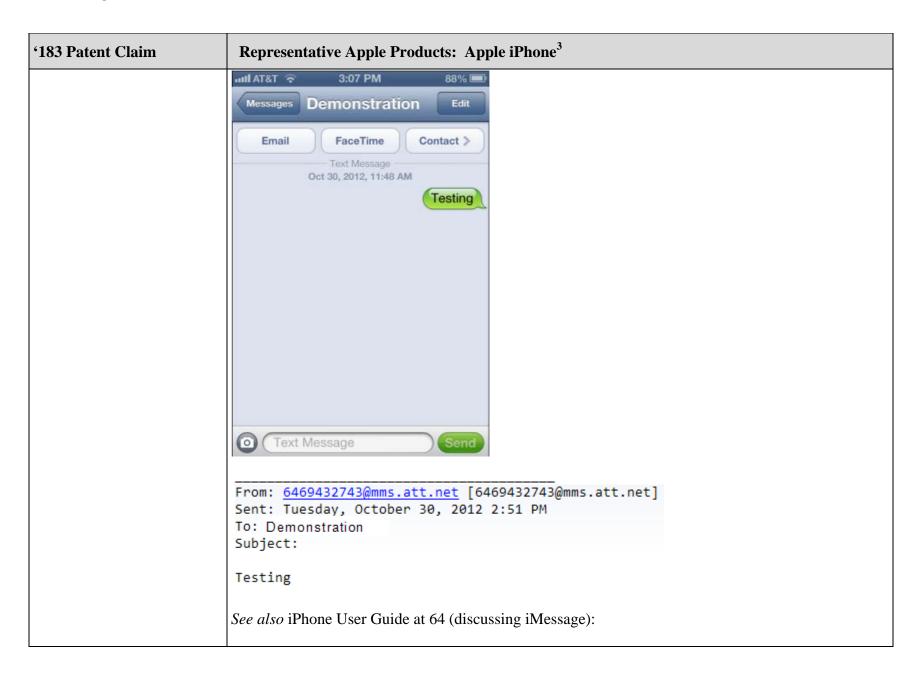

'183 Patent Claim	Representative Apple Products: Apple iPhone <sup>3</sup>
	An alert badge (1) appears if a message can't be sent. Tap the alert in a conversation to try sending the message again. Double-tap to send the message as an SMS text message.
	Similarly, upon information and belief, the memory of an Apple iPhone stores a communication preference identifying that, when FaceTime (e.g., using an Apple ID, email address, or phone number) is unavailable, a voice call (using a phone number) should be initiated with the contact (i.e., in that sequential order).
	See, e.g., iPhone User Guide at 47:
	FaceTime With iPhone 4 or later, you can make a video call to someone with a Mac or other iOS device that supports FaceTime. The FaceTime camera lets you talk face-to-face; switch to the iSight camera on the back to share what you see around you.
	Note: On iPhone 3GS or iPhone 4, you need a Wi-Fi connection to the Internet. On iPhone 4S or later, you can also make FaceTime calls over a cellular data connection. Cellular data charges may apply. To turn off FaceTime using cellular data, go to Settings > General > Cellular.
	Make a FaceTime call: In Contacts, choose a name, tap FaceTime, then tap the phone number or email address that the person uses for FaceTime.
	To call someone who has an iPhone 4 or later, you can start by making a voice call, then tap FaceTime.
	See also iPhone User Guide (iOS 5.1) at 60 (discussing FaceTime):
	If your Wi-Fi network is unavailable (for example, if you're out of range), you get an option to redial the number for a voice call.
wherein the communication preference comprises a communication preference chosen from a group	Upon information and belief, such communication preference is chosen from a group consisting of a fixed communication order, a pattern communication order, a time based communication order, and a calendar based communication order.

'183 Patent Claim	Representative Apple Products: Apple iPhone <sup>3</sup>
consisting of a fixed communication order, a pattern communication order, a time based communication order, and a calendar based communication order;	For example, upon information and belief, the memory of an Apple iPhone stores a communication preference identifying that, when iMessage (e.g., using an Apple ID, email address, or phone number) is unavailable, communication with the contact should be initiated by SMS text message (e.g., using a phone number or email address) (i.e., in that fixed, sequential order).  See iPhone User Guide at 64:
	Blue is best.  On iPhone, when your text bubble is blue instead of green, you'll know you're using iMessage instead of SMS. You'll know that you can get a quicker response. You'll know that the text session is free. You'll know it's been sent to all your recipients' Apple devices. And you'll know they received the text. SMS texters will be green with envy.  Looks like funl 'm glad you're immersing yourself in the culture.  Yep! Spain is already starting to feel like home.  Deviced of the many of the start of the culture.  Yep! Spain is already starting to feel like home.  Deviced of the many of the start of the culture.  Well, she says Hill here are you in the culture.  Yep! Spain is already starting to feel like home.  Deviced of the many of the weekend.
	* * *
	*Messages may be sent as SMS when iMessage is unavailable; carrier messaging fees apply.

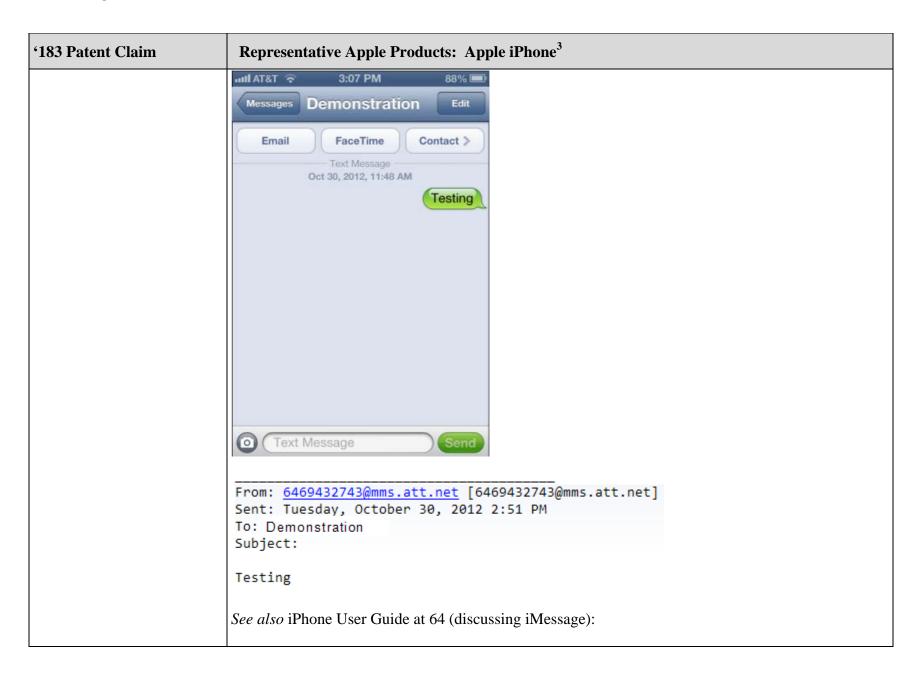

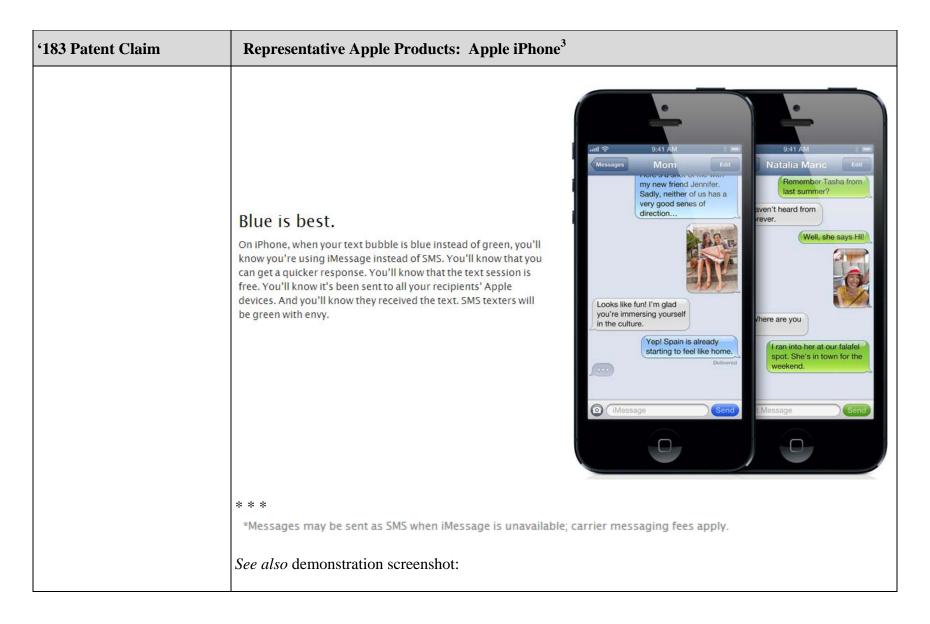

'183 Patent Claim	Representative Apple Products: Apple iPhone <sup>3</sup>
	An alert badge (1) appears if a message can't be sent. Tap the alert in a conversation to try sending the message again. Double-tap to send the message as an SMS text message.
	Similarly, upon information and belief, the memory of an Apple iPhone stores a communication preference identifying that, when FaceTime (e.g., using an Apple ID, email address, or phone number) is unavailable, a voice call (using a phone number) should be initiated with the contact (i.e., in that fixed, sequential order).

	An alert badge <b>()</b> appears if a message can't be sent. Tap the alert in a conversation to try sending the message again. Double-tap to send the message as an SMS text message.
	Similarly, upon information and belief, an Apple iPhone will, initiate communication with a contact using FaceTime (e.g., using an Apple ID, email address, or phone number) as the first communication means via a first communication connection.
	See, e.g., iPhone User Guide at 47:
	FaceTime With iPhone 4 or later, you can make a video call to someone with a Mac or other iOS device that supports FaceTime. The FaceTime camera lets you talk face-to-face; switch to the iSight camera on the back to share what you see around you.
	Note: On iPhone 3GS or iPhone 4, you need a Wi-Fi connection to the Internet. On iPhone 4S or later, you can also make FaceTime calls over a cellular data connection. Cellular data charges may apply. To turn off FaceTime using cellular data, go to Settings > General > Cellular.
	Make a FaceTime call: In Contacts, choose a name, tap FaceTime, then tap the phone number or email address that the person uses for FaceTime.
	To call someone who has an iPhone 4 or later, you can start by making a voice call, then tap FaceTime.
	See also iPhone User Guide (iOS 5.1) at 60 (discussing FaceTime):
	If your Wi-Fi network is unavailable (for example, if you're out of range), you get an option to redial the number for a voice call.
detecting that the first communication connection is disconnected;	Upon information and belief, an Apple iPhone can detect that a first communication connection with a contact is disconnected; for instance, if a communication connection using iMessage (e.g., using an Apple ID, email address, or phone number) cannot be established.
	See iPhone User Guide at 64:

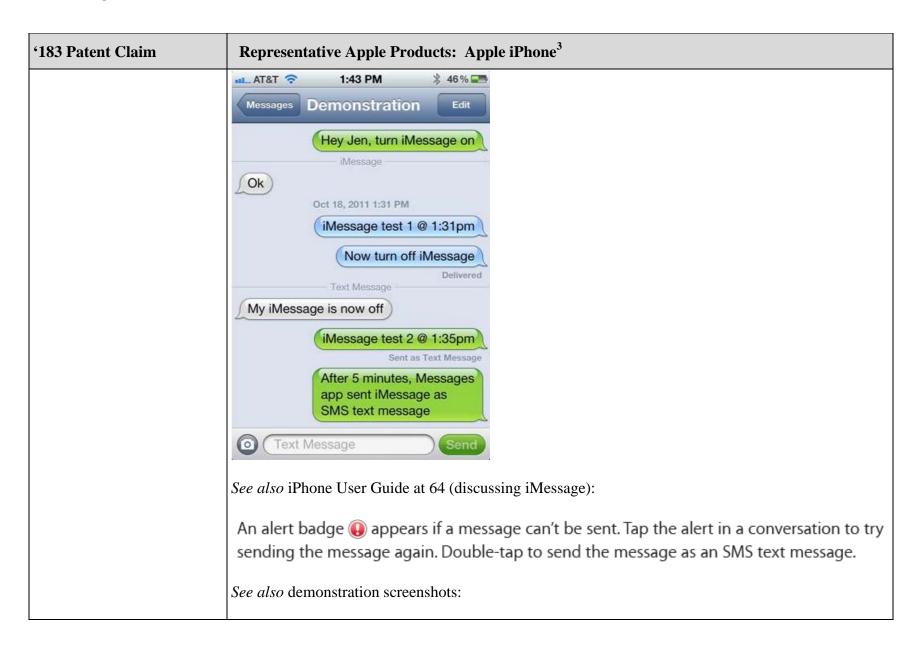

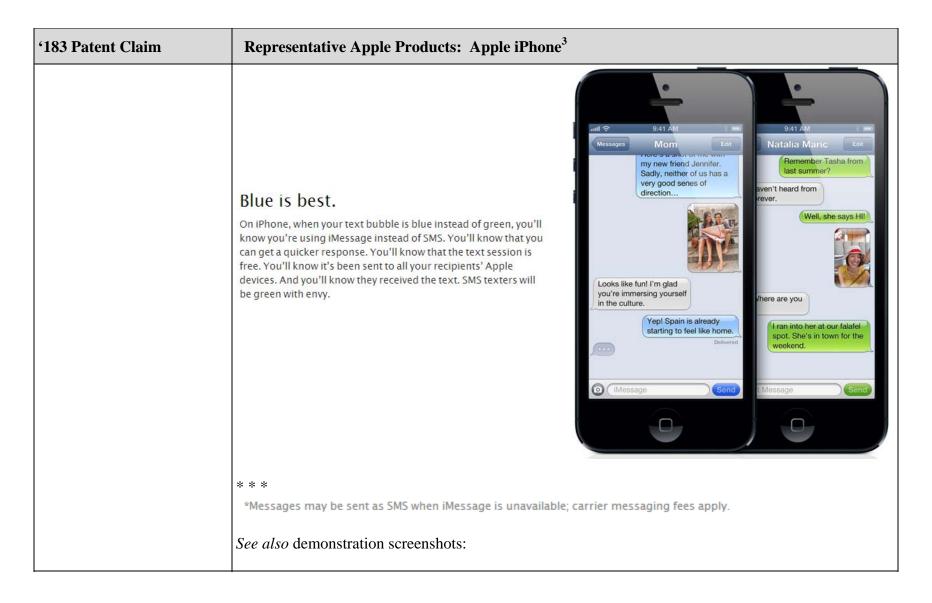

'183 Patent Claim	Representative Apple Products: Apple iPhone <sup>3</sup>
	using an Apple ID, email address, or phone number) cannot be established.
	See, e.g., iPhone User Guide at 47:
	FaceTime With iPhone 4 or later, you can make a video call to someone with a Mac or other iOS device that supports FaceTime. The FaceTime camera lets you talk face-to-face; switch to the iSight camera on the back to share what you see around you.
	Note: On iPhone 3GS or iPhone 4, you need a Wi-Fi connection to the Internet. On iPhone 4S or later, you can also make FaceTime calls over a cellular data connection. Cellular data charges may apply. To turn off FaceTime using cellular data, go to Settings > General > Cellular.
	Make a FaceTime call: In Contacts, choose a name, tap FaceTime, then tap the phone number or email address that the person uses for FaceTime.
	To call someone who has an iPhone 4 or later, you can start by making a voice call, then tap FaceTime.
	See also iPhone User Guide (iOS 5.1) at 60:
	If your Wi-Fi network is unavailable (for example, if you're out of range), you get an option to redial the number for a voice call.
identifying a second communication means associated with the contact,	Upon information and belief, when an Apple iPhone detects that the first communication connection with the contact is disconnected, it will identify a second communication means associated with the contact; for example, when the first communication connection would have been using iMessage, an Apple iPhone will identify SMS text message using a phone number or email as a second communication means; when the first communication connection would have been using FaceTime, an Apple iPhone will identify voice call using a phone number as a second communication means.
	See, e.g., iPhone User Guide at 64:

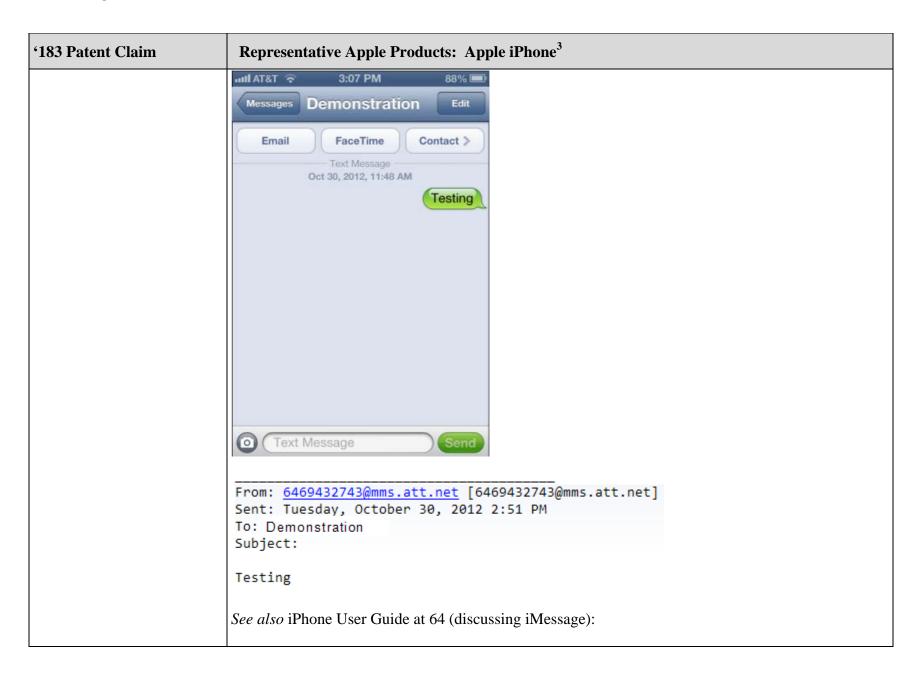

'183 Patent Claim	Representative Apple Products: Apple iPhone <sup>3</sup>
	FaceTime With iPhone 4 or later, you can make a video call to someone with a Mac or other iOS device that supports FaceTime. The FaceTime camera lets you talk face-to-face; switch to the iSight camera on the back to share what you see around you.
	Note: On iPhone 3GS or iPhone 4, you need a Wi-Fi connection to the Internet. On iPhone 4S or later, you can also make FaceTime calls over a cellular data connection. Cellular data charges may apply. To turn off FaceTime using cellular data, go to Settings > General > Cellular.
	Make a FaceTime call: In Contacts, choose a name, tap FaceTime, then tap the phone number or email address that the person uses for FaceTime.
	To call someone who has an iPhone 4 or later, you can start by making a voice call, then tap FaceTime.

	WARNING: For important information about avoiding distraction while driving, see Important safety information on page 146.
	Messages lets you exchange text messages with other SMS and MMS devices via your cellular connection, and with other iOS devices using iMessage.
	iMessage is an Apple service that lets you send unlimited messages over Wi-Fi (as well as cellular connections) to other iOS and OS X Mountain Lion users. With iMessage, you can see when other people are typing, and let them know when you've read their messages. iMessages are displayed on all of your iOS devices logged in to the same account, so you can start a conversation on one of your devices, and continue it on another device. iMessages are encrypted for security.
	See also, e.g., <a href="http://www.apple.com/ios/messages/">http://www.apple.com/ios/messages/</a> :

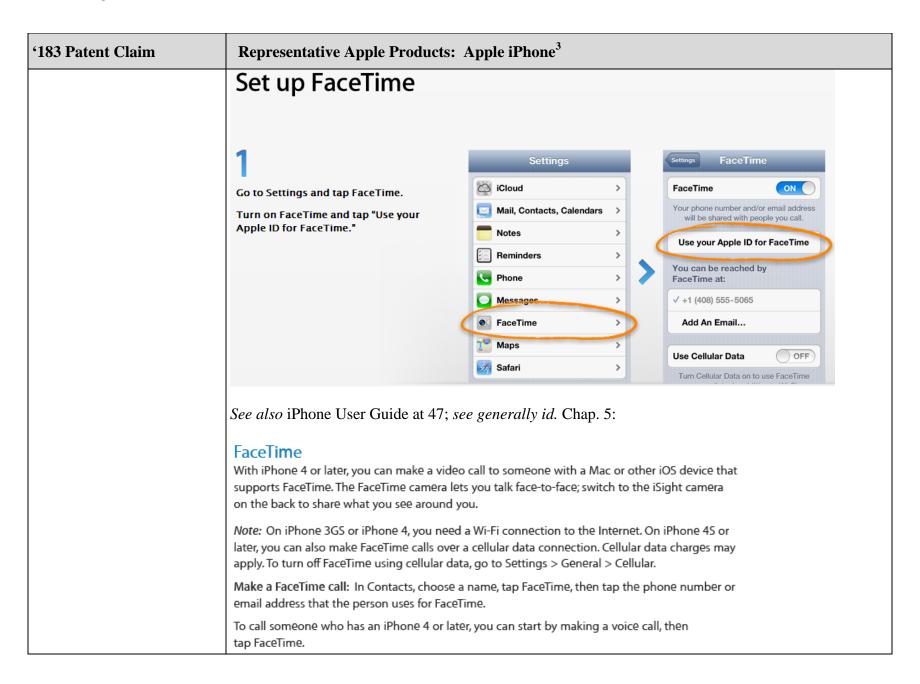

'183 Patent Claim	Representative Apple Products: Apple iPhone <sup>3</sup>
	Messages Unlimited texting. Unlimited fun.
	If you're a texter, you'll love Messages on iPhone, iPad, and iPod touch. Now they all come with iMessage, a service that's an even better kind of texting. Because it's free for you and anyone texting over Wi-Fi using an iOS device or Mac with iMessage. And it's unlimited.* So say as much as you want. ***
	Exchange words. Or photos. Or videos.
	iMessage lets you send messages back and forth with anyone on iPad, iPhone, iPod touch, or a Mac running Mountain Lion. Send photos, videos, locations, and contacts, too. If you have more than one Apple device, iMessage keeps the conversation going across all of them. And you can text and send photos and videos via MMS to other mobile phones over cellular networks. Even ask Siri to text for you. Just say "Tell Peter I'm on my way" and Siri writes your message and fires it off.  * * *

'183 Patent Claim	Representative Apple Products: Apple iPhone <sup>3</sup>
	Blue is best.  On IPhone, when your text bubble is blue instead of green, you'll know you're using iMessage instead of SMS. You'll know that you can get a quicker response. You'll know that the text session is free. You'll know it's been sent to all your recipients' Apple devices. And you'll know they received the text. SMS texters will be green with envy.  Looks like furl I'm glad you're immersing yourself in the culture.  Yep! Spain is already starting to feel like home.  Devices:  O Message Sont
	* * *  *Messages may be sent as SMS when iMessage is unavailable; carrier messaging fees apply.

'183 Patent Claim	Representative Apple Products: Apple iPhone <sup>3</sup>		
	What information do I need to call someone using FaceTime?		
	To call someone using FaceTime, you need their phone number or email address. Which one you use is determined by the device you are calling:		
	When calling someone using an iPhone 4 or later: Try the phone number of the person you are calling first. If the person has registered an email with FaceTime, you can use that as well.		
	When calling someone using an iPad 2 or later, iPod touch (4th generation), or FaceTime for Mac: Use the email address designated for FaceTime of the person you are calling.		
	On iPad, iPod touch, and FaceTime for Mac, you need to add a person as a contact using the FaceTime or Contacts app before you can call them.		
a transceiver for communicating with a contact using a first communication means via a first communication connection;	Upon information and belief, an Apple iPhone has a transceiver for communicating with a contact using a first communication means (e.g., iMessage using an Apple ID, email address, or phone number; a video call over FaceTime) via a first communication connection (e.g., the user of the Apple iPhone can connect to a contact who has a device capable of receiving an iMessage, and iMessage is activated on that Apple iPhone; the user of the Apple iPhone can initiate a video call to a contact who has a device capable of FaceTime, and FaceTime is activated on that Apple iPhone).  Upon information and belief, an Apple iPhone contains one or more radios for communicating over Wi-Fi or cellular connections using iMessage.  See, e.g., iPhone User Guide at 64:  iMessage is an Apple service that lets you send unlimited messages over Wi-Fi (as well as cellular connections) to other iOS and OS X Mountain Lion users. With iMessage, you can see when other people are typing, and let them know when you've read their messages. iMessages are displayed on all of your iOS devices logged in to the same account, so you can start a conversation on one of your devices, and continue it on another device. iMessages are encrypted for security.

	See also id. at 130:
	Wi-Fi
	Joining Wi-Fi networks Wi-Fi settings determine whether iPhone uses local Wi-Fi networks to connect to the Internet. When iPhone is joined to a Wi-Fi network, the Wi-Fi icon ? in the status bar at the top of the screen shows signal strength. The more bars you see, the stronger the signal. If no Wi-Fi networks are available, or if you've turned Wi-Fi off, then iPhone connects to the Internet via your cellular data network when available.
	Upon information and belief, an Apple iPhone contains one or more radios for communicating over Wi-Fi or cellular connections using FaceTime.
	See, e.g., <a href="http://www.apple.com/ios/facetime/">http://www.apple.com/ios/facetime/</a> :

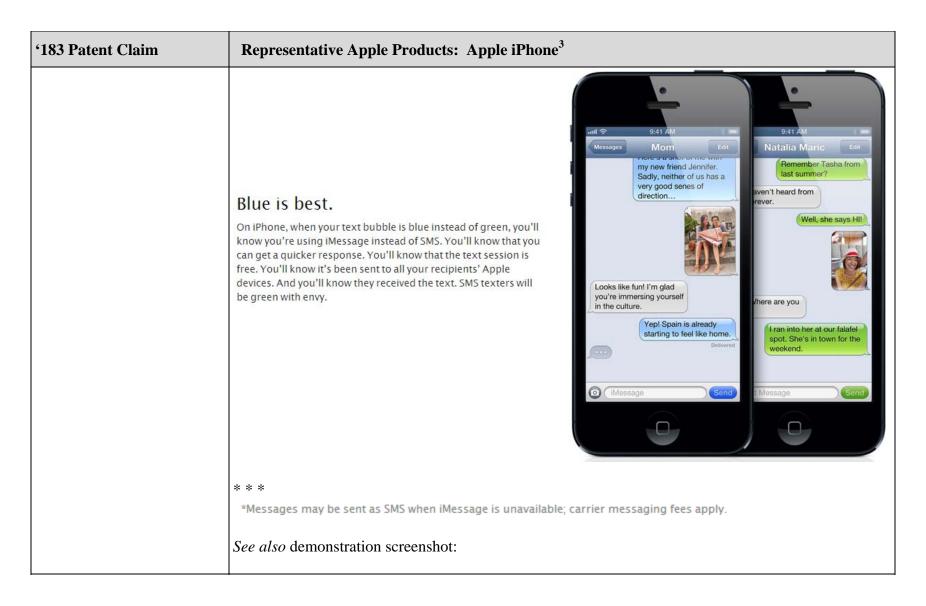

'183 Patent Claim	Representative Apple Products: Apple iPhone <sup>3</sup>
	FaceTime With iPhone 4 or later, you can make a video call to someone with a Mac or other iOS device that supports FaceTime. The FaceTime camera lets you talk face-to-face; switch to the iSight camera on the back to share what you see around you.
	Note: On iPhone 3GS or iPhone 4, you need a Wi-Fi connection to the Internet. On iPhone 4S or later, you can also make FaceTime calls over a cellular data connection. Cellular data charges may apply. To turn off FaceTime using cellular data, go to Settings > General > Cellular.
	Make a FaceTime call: In Contacts, choose a name, tap FaceTime, then tap the phone number or email address that the person uses for FaceTime.
	To call someone who has an iPhone 4 or later, you can start by making a voice call, then tap FaceTime.
