

EXHIBIT D

Melody iDEN System

The Melody iDEN System is a cost effective, fully integrated communication solution that leverages the best features of two-way radio, cellular phones, packet data and paging for medium to large scale markets operating in 800MHz spectrum. iDEN Melody Networks are scalable and offer both high availability and reliability to Network Operators who seek to extend high quality network services to their customers. Leveraging over 15 years in iDEN technology innovation, Melody Networks include industry-standard hardware architecture (ATCA), space optimizing equipment footprint, common part numbers among key network elements, and a single software code-line with legacy iDEN platforms.
