"I Can't Remember" may be caused by lack of Memory Center™ Activators.

As you age, your body may not produce all the activators it did when you were younger. When you run low on important "Memory Center™" Activators, your memory becomes dull and sluggish — and "a thick mental fog rolls in."

Are Your "Memory Center™" Activators Low? Discover the Signs...

- You forget names, dates and facts.
- You start to think slower.
- It takes you longer to understand conversations.
- You find it hard to concentrate.

Improve memory and focus without a prescription!

Achieve stronger brain performance. Concentrate easier and remember better! When you spark your memory with the right activators...

- ✓ Your mind reacts better
- ✓ You recall things more clearly
- ✓ You think more clearly

Fight age-related memory loss

The graph below represents your recall ability at different ages.

Age 45-59yrs. 60-69yrs. 70-79yrs. 80-89yrs.
 (Results based on the UCSF Memory and Aging Centers delayed free recall test.)

It was like a switch turned on inside my brain! After a few days of taking Concentra I noticed everything began to change. I felt more awake than usual. Reading the newspaper was easier. I think faster and I talk with more confidence. With Concentra I feel alive again! — James B.
