1270 Doris Rd.
Auburn Hills, MI 48326

Dear Ms. Dembrosky,

I am writing to report on the medical condition of Micah Fialka-Feldman. Micah is now 23 years old and has a history of cognitive impairment, bicuspid aortic heart valve and labile hypertension.

He is currently on no medications chronically and has no physical symptoms. He is allergic to Penicillin and must take antibiotics for any dental or surgical procedures. His immunizations are up to date. His most recent physical examination was normal and included a BP of 130/86. His most recent lab tests results including cholesterol were normal.

In conclusion, Micah has been healthy and has no immediate health risk. His cognitive and physical conditions mentioned above are stable.

Thank you for your consideration. Please contact me if you need any other information.

Sincerely,

Howard Schubiner, MD
