Summary

Researcher and Technical Leader specializing in polymeric materials and processing with 16 years of technology management, product and process development, quality, and manufacturing experience following Ph.D. in chemical engineering working in a broad range of assignments in the packaging, automotive, and plastic film processing industries. R&D Manager with experience driving and tracking projects with a formal Six Sigma stage gate review process and financial benefit tracking.

Technical expert with big picture focus from work experience and extensive training in and application of lean manufacturing and Six Sigma concepts. Practical problem solver with solid experience working with manufacturing, sales, marketing, customer service, transportation, and other technical people to develop and improve products and processes. Strong leader, motivator, and strategic thinker with ability to conceive, prioritize, and drive projects to successful implementation in multidisciplinary and multifunctional environments.

Specialties

- Materials and processing knowledge in thermoplastics, thermosets, sheet molding compound, tooling development and production, and advanced polymer composites.
- Analytical expertise in many characterization techniques, including optical and electron microscopy, mechanical testing, performance testing, and thermal characterization.
- Project/people management and product development capability with focus on the R&D/Manufacturing interface.
