GAMELINX

Big thinking for smaller gaming operations.

GAMELINX-PAY

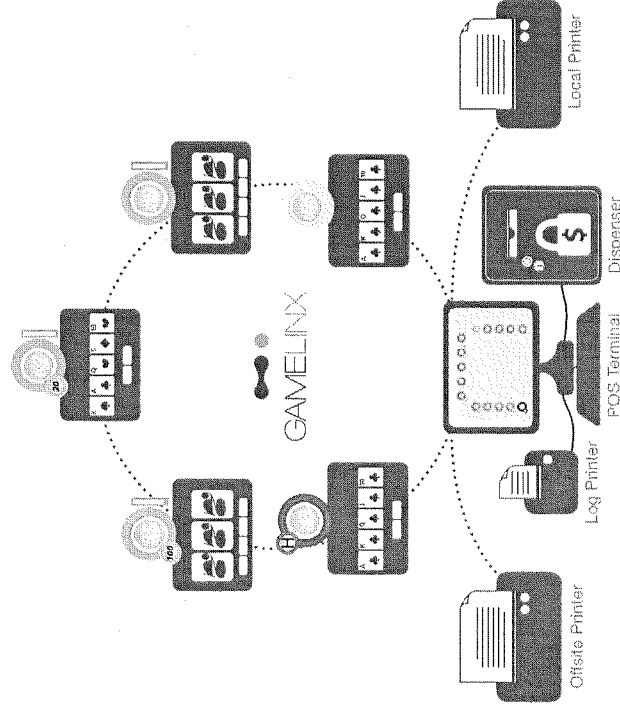

PLAYERLINX

**Good for you.
Good for your players.
Great for business.**

Gaming Technology Group's GameLinx System is a modularized gaming management, security and loyalty system that will effortlessly improve your gaming operations – and, most importantly, increase your profits. The benefits begin immediately after installation, for both you and your players.

Think of it as ROI, ASAP.

We've engineered the GameLinx System with retail stores and restricted gaming operations in mind. Comprising three innovative systems (GameLinx, GameLinx-Pay, and PlayerLinx), the complete solution will enable you to perform essential operational tasks, increase your profits with player loyalty, and dispense and store cash with efficiency, security and ultimate peace of mind.

This depth of efficiency, breadth of player rewards, and elevated level of security was once only available to large casinos and mega-resorts. With the GameLinx system, now it's all available to you, too. So if you've got a smaller operation, we're ready to help you enjoy big results.

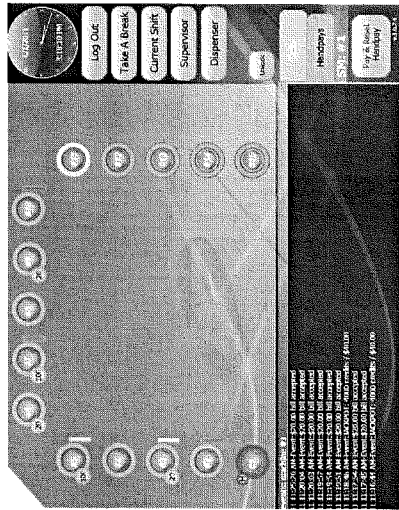

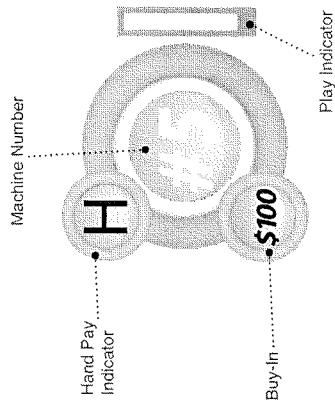

Gamelinx

Information is the advantage.

Gamelinx tracks all activity for each machine at each location, providing real-time, accurate automated meter, machine and jackpot functions that optimize your operation and expenditures. The consistent monitoring of gaming activity allows for increased game security, operational ease and immediate notifications. Best of all, you know your data is always relevant, because it's tracked in real-time. Management reports are generated easily and sent remotely. In short, the essential information

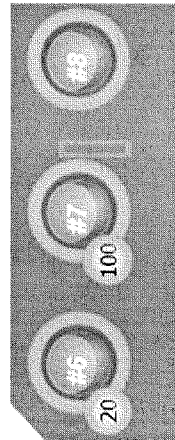

you need – everything from maintenance reports to detailed security logs – is always right at hand.

With Gamelinx, you get user-friendly POS terminals that enable employees to interact with customers effortlessly for payout and jackpots. Your team members will get at-a-glance information on the level of play for every patron on every machine, giving them the power to ensure stellar service every time.

Enjoy all of this with Gamelinx:

- Fully integrated gaming information system with constant monitoring of gaming activity
- Real-time data, accurate automated meter and jackpot functions
- Real-time view of current play
- Time of play meters allow for better patron attention
- Increased game security and employee accountability
- Wide array of reports to analyze location
- Each shift's activity is archived by employee for administrator review, including: gaming machine identifier, dispensed bills by denomination, gaming machine security events (such as door opened or malfunctions), games played, games won, coin in, coin out, jackpots and drop
- Single-wire functionality that connects machines to virtually all manufacturers which support SAS 5 protocol
- Allows for fine-tuning of machine mix for optimum profitability
- Streamlined drop process for greater confidence in the appropriate split of funds – with additional monitoring of safe-funds for potential shortages
- Comprehensive management reports and detailed security reports
- Remote printing of management reports
- Provides critical, relevant information to make immediate decisions
- Automated streamlined drop processes for complete assurance that all funds are accounted for
- Nevada Gaming Control approved
- W2G management

GameLinx-Pay Security is your promise.

GameLinx-Pay is the secure cash storage and dispensing system architected specifically for smaller operations. It enables immediate and accurate cash levels, along with monitoring of all cash transactions for play.

For owners, it means maximized security for payouts, plus speed and accuracy for your drops.

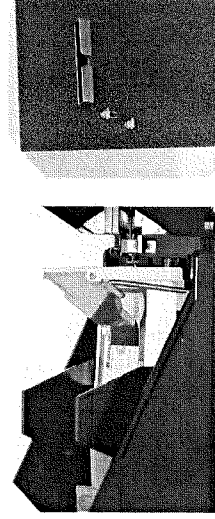

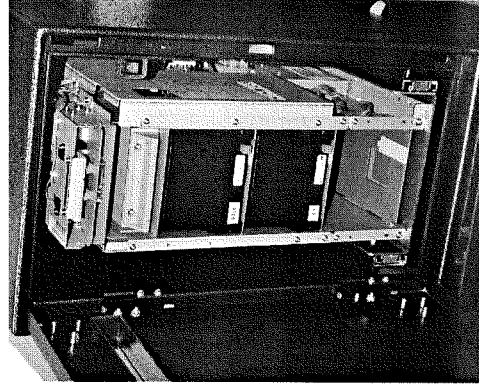

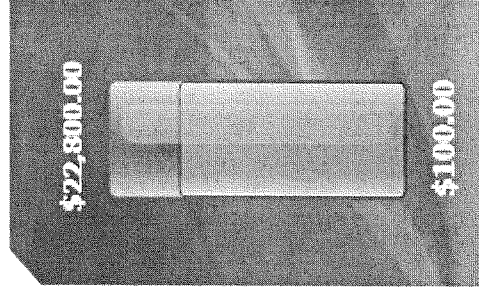

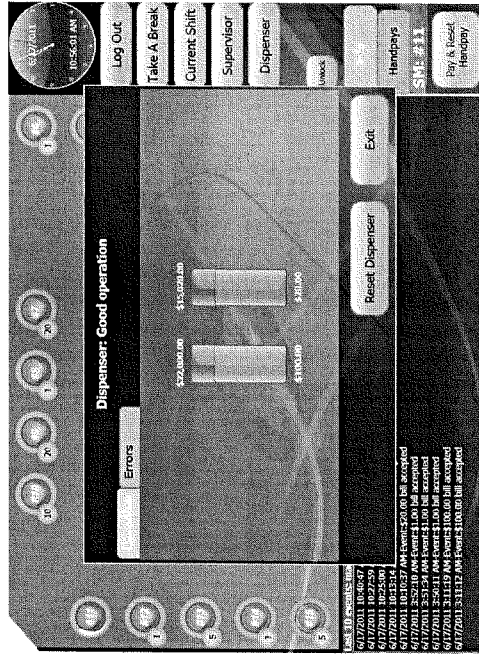

For players, it means easy access to operators and attendants for their cash.

For bartenders, it means they can quickly and accurately pay customers, watch buy-in events as they happen, and better service customers.

Unlike most systems, GameLinx-Pay can be configured to dispense any combination of bill denominations desired.

Enjoy these benefits with GameLinx-Pay:

- Secure storage and monitoring of cash levels
- Accurate, real-time cash level meters
- Quick and accurate dispensing of cash
- Sleek, discrete under-counter placement
- Multi-denominational cassettes that allow precision management of dispensing
- Two to six cassette dispensers available
- \$1 to \$100 bill cassettes
- No more high volume payouts from your cash registers
- No cash on your gaming floor
- Quick and easy reconciliation to cash on hand
- Immediate notification of player cash-out requests or jackpots

- Key functions such as reporting dispenser fill information and troubleshooting of error messages
- Capable of generating end-of-shift reports based on log-out parameters
- Shift information archived in terminal storage
- Stored data enables accountability for audit and tracking mechanisms that minimize the staff burdens created by constant monitoring -- saving you significant money
- Reduce the time and personnel requirements for your drop

PlayerLinx

Create loyalty to your brand.

PlayerLinx is a comprehensive loyalty program with benefits that rival those of much larger gaming operators and, best of all, it's YOUR BRAND. It all begins with a sophisticated point-of-sale (POS) terminal at each of your sites (when you combine PlayerLinx with GameLinx, you'll enjoy a smaller systems footprint with only one terminal). The terminal allows easy addition of new players and editing of existing members. You can also manage player requests with an easy-to-operate custom user interface. To complement this terminal, PlayerLinx

provides a robust administrative website that offers remote access to all player data and PlayerLinx functions. Your players will enjoy promotions and reward potential similar to those offered by major casinos. As the owner or administrator, you'll have immediate – and even remote – access to all player activity.

PlayerLinx provides superior TCP/IP connectivity through dedicated point-to-point circuits. That means reliable, uninterrupted performance 24/7.

This robust customer relations tool will:

- Inspire loyalty in players
- Provide promotional opportunities
- Increase customer play
- Entice new loyal customers
- Provide player data and reporting
- Improve profits

NAME	CARD	ACCOUNT	STATUS	ACTS	LAST DATE	CUSTOMER
ANGEL, DAVID	100	0000000001	Active	Y		0
RA, RAY	100	0000000007	Active	N		0
BARNER, JIM	100	0000000009	Active	N		0
DOES, JAMES	100	0000000014	Active	N		0
DOES, REBECC	100	0000000015	Active	N		0

Rely on PlayerLinx for these key functions:

- **Enrollment** – Employees scan cards to immediately activate accounts using the POS terminal. Customer enrollment forms have an attached player's card; the application form and the card have identical barcodes.
- **Updates and Edits** – Employees can easily update and add customer information to active accounts. Specifically, they can update names, addresses and information that might be pertinent to a player's rewards campaign or promotional incentives.
- **Promotional Activity** – Managers may utilize the promotional wizard to quickly and easily create a variety of promotions for their location or enterprise, or create their own custom one-of-a-kind promotion.
- **Redeem Promotional Rewards** – Employees can access information and process reward redemptions at POS terminals in real time.
- **Player's Card Adjustment** – In the event of a player's card error, managers with appropriate user privileges can adjust promotional balances. All adjustments are logged into central database for administrator review.
- **Account Look-up** – The PlayerLinx System provides easy access to account information. Employees can search the database by customer information to replace a lost card, update promotional information or redeem rewards. Information can be merged from the lost card to the new card, and players' accounts are updated at the POS terminal.
- **View and Print History** – Users with appropriate privileges can view and print a customer's promotion activity history for up to 25 prior transactions.

Know more, benefit more.

We also provide a useful management tool known as the Daily Flash Report. This innovation issues essential daily reports which give you a clear 24-hour snapshot of new card activity, promotion participants, total promotion points earned, points redeemed, gift card transactions and manual adjustments.

PlayerInx provides real-time, multi-location access to player and machine information for specific locations within your enterprise, including:

- Instant reward administration, including anniversaries, birthdays and sign-up rewards
- Current activity for the location
- Identification of the machine currently in use
- Player identification
- Session start and end times
- Machine activity for the last 24 hours

How off-site is on-target.

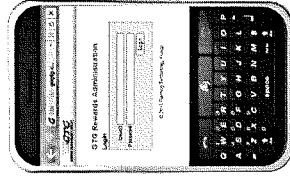

You don't have to be on-site to gain access to point-of-sale user data and player activity information. The PlayerInx System gives you off-site access to all gaming activity through a secure, web-based interface. That means all the information you need is as close as your computer or smartphone, so long as you've got an Internet connection. To ensure full compatibility, administrative modules are supported by common browsers such as Internet Explorer, Google Chrome or Mozilla Firefox.

This website application allows a manager to:

- Assign user rights to employees
- Setup promotions
- Run a variety of gaming and administrative reports
- Manage customer information
- Manage and track employees
- Build customer mailing lists

3 innovations.

1 amazing result.

You don't have to be a mega-resort to enjoy the security, efficiencies, and player loyalty programs of one. Fortunately, you don't need a mega-sized budget, either.

Now is the time to put the innovations of Gaming Technology Group's GameLinux System to work in your operation.

Contact us – installation is just a phone call away.
