LimeWire Cannot be Stopped **Open Source Program Freely Distributed**

(April 2005) "If the Supreme Court says it is illegal to produce this software, Lime Wire the company will cease to exist. But LimeWire the software will continue to be on the Net no matter what we do in this business."

These are words from Lime Wire CEO Mark Gorton, discussing the future of LimeWire in light of a pending US Supreme Court case. LimeWire, the flagship product of Lime Wire LLC, is distributed under the Gnu GPL, a license which allows users to access, modify and distribute freely the code for the LimeWire program. Hundreds of volunteers are improving the code at any given time, and they are given free reign to use or distribute that code over the Internet as they see fit. Once the code has been developed and distributed by the Lime Wire team, anyone can find and further develop the code for their own uses. Lime Wire gives away its code and has no control over its subsequent forms or distribution.

Greg Bildson, Lime Wire's CTO/COO, is also a strong advocate of open source software. "Lime Wire has a large and experienced in-house development team backed up with open source developers which has allowed us to develop sophisticated capabilities. Our open source community is constantly contributing to our code. We believe that information should be available freely to all. Open source software has consistently been more stable, reliable and secure than software developed in closed environments."

About Lime Wire LLC

Lime Wire LLC is a leading developer of advanced P2P file sharing software. The company currently employs the largest number of expert developers dedicated to open standard software development. Lime Wire's software allows users to share and search for any file type. Headquartered in New York City, Lime Wire LLC was founded in June 2000 and currently has 4 million unique users monthly. For more information, visit the company's website at www.limewire.com.
