## Copyright Information

- » [LimeWire Users](#)
- » [Copyright Owners](#)

### LimeWire Users

LimeWire is legal software, but it is illegal for you to use LimeWire to share copyrighted files without permission. Purchasing LimeWire PRO does not constitute a license for obtaining or distributing unauthorized files. When you download LimeWire software from [www.limewire.com](http://www.limewire.com), you agree to refrain from using LimeWire for the purpose of copyright infringement.

### Sharing files in your Library

Everything you share with LimeWire becomes public and trackable. See [http://www.limewire.org/wiki/index.php?title=View\\_files](http://www.limewire.org/wiki/index.php?title=View_files) to see which files you're sharing. To use LimeWire legally, you must have the owner's permission to share every file in your Library on the Gnutella network. For example, music and movies from major labels and movie studios are copyrighted, and you do not have permission to share these files (even if you bought them). If you're having trouble determining if a file is OK to share, here are a few ideas that may help:

- Look in the "License" column within the LimeWire program to see if a file has a shareable license type.
- Files that another user has published as Creative Commons appear as . A file with a verified Creative Commons license is legal to share. You can verify a specific file by right-clicking on the CC icon, selecting "View License" and selecting "Verify". Files with unverified Creative Commons licenses may still be illegal to share.
- [Weedshare](#) files appear as in the License column, and can be legally shared. These files have DRM (Digital Rights Management) that allows users to play the file three times for free before deciding to buy.
- Search for a registration with the [US Copyrights Office database](#). A work may still be copyrighted and illegal to share even if it's not registered with the US Copyright Office.
- Check out [www.magnatunex.com](http://www.magnatunex.com) for more songs and videos that are free and legal to share.

### Downloading files on the Gnutella network

There are many programs other than LimeWire that connect users to the Gnutella network. Keep in mind that many users disobey copyright law -- downloading copyrighted files from such users means you're both breaking the law!
