gribble@cs.washington.edu](http://www.cs.washington.edu/homes/gribble/gribble@cs.washington.edu)

Employment

Associate Professor, Department of Computer Science and Engineering, University of Washington.
(9/16/2005 – present)

Assistant Professor, Department of Computer Science and Engineering, University of Washington.
(11/1/2000 – 9/15/2005)

Research interests

Operating systems, distributed systems, and networking, with particular interests in virtual machine monitors, the measurement and analysis of content delivery systems and peer-to-peer file-sharing networks, and operating system support for modern security threats such as spyware and worms.

Education

B.Sc., University of British Columbia, June 1995, combined Computer Science and Physics honours program. Physics thesis supervisor: Dr. Kristin Schleich. Computer Science thesis supervisor: Dr. Maria Klawe.

M.Sc., University of California at Berkeley, December 1997, Computer Science program. Thesis supervisor: Dr. Eric A. Brewer. Member of the Bay Area Research Wireless Access Network (BARWAN) and Global Mobile Computing by Proxy (GloMop) research groups.

Ph.D., University of California at Berkeley, September 2000, Computer Science program. Thesis supervisor: Dr. Eric A. Brewer. Senior student on the “Ninja” research group. Dissertation title: “A Design Framework and a Scalable Storage Platform to Simplify Internet Service Construction.”

Teaching

University of Washington CSE142: Computer Programming I (Winter 2006). Basic programming-in-the-small abilities and concepts. Highlights include procedural and functional abstraction with simple built-in data type manipulation. Basic abilities of writing, executing, and debugging programs.

University of Washington CSE451: Undergraduate Operating Systems (Winter 2001, Winter 2005). The principles and architecture of modern operating systems, including process management, memory management, storage management, resource allocation, protection, and security. Students implement projects that modify or enhance aspects of the Linux operating system kernel.

University of Washington CSE461: Undergraduate Networks (Fall 2005). Computer network architectures, protocol layers, network programming, transmission media, encoding systems, switching, multiple access arbitration, network routing, congestion control, flow control, transport protocols, real-time, multicast, and network security. Students implement a set of routing, transport, and application protocols on a packet simulator and emulator.

University of Washington CSE551: Graduate Operating Systems (Spring 2001-2005, 2007, PMP2008). This course focuses on operating system design and construction techniques. Topics

covered include concurrent programming, operating system kernel structure, protection, transaction processing, design methodologies, file systems, virtual memory, and distributed systems.

University of Washington CSE552: Graduate Distributed Systems (Winter 2002, PMP Winter 2004). In this course, we covered classical distributed systems results, including consensus, Byzantine fault tolerance, time and logical clocks, group membership, causally and totally ordered group communications, and security protocols.

University of Washington CSE590IS: Graduate Internet Systems (Winter 2003). In this reading course, we covered many aspects of Internet services, including web caching, content distribution, security, and programming models.

UC Berkeley CS39c: “From Smoke Signals to the Internet, From the Abacus to the Handheld PC” – a freshman seminar on the history of communications and computing. While a graduated student at Berkeley, I co-instructed this course for the three years with Prof. Randy H. Katz and Prof. Armando Fox (now at Stanford University).

Current Graduate Students

- Tanya Bragin:** Pre-quals. Co-advised with Hank Levy.
- Paul Gauthier:** Post-quals. Co-advised with Brian Bershad. *Currently on leave at a startup.*
- Roxana Geambasu:** Post-quals. Co-advised with Hank Levy.
- Alex Moshchuk:** Post-quals. Co-advised with Hank Levy.
- Charlie Reis:** Currently taking generals exam. Co-advised with Hank Levy.
- David Richardson:** Pre-generals. *Currently on leave at a startup.*

Graduated Ph.D. Students

- Krishna Gummadi:** Graduated in Fall 2005, joined the Max Planck Institute as head of the networked systems research group. Dissertation topic: techniques for and analysis of large-scale Internet measurement. Co-advised with Hank Levy.
- Stefan Saroiu:** Graduated December 2004. Assistant Professor at the University of Toronto Department of Computer Science. Co-advised with Hank Levy.
- Andrew Whitaker:** Graduated Fall 2005, joined Amazon.com. Dissertation topic: design, implementation, and applications of the Denali virtual machine monitor.

Honors and awards

Torode Family Endowed Career Development Professorship in Computer Science, 2006-2008.

Alfred P. Sloan Research Fellowship, 2004-2006.

NSF CAREER award, 2002-present. Grant ANI-0132817, “Enabling New Network Applications and Distributed Systems using Mobile, Lightweight Protection Domains.”

Teaching Awards

Received a plaque of appreciation from my CSE451 students at the end of the Winter 2001 quarter. Won the department-wide “best teacher” award from the UW undergraduate ACM chapter for the 2001-2002 academic year, and the 2005-2006 academic year.

Graduate Studies Awards

Cal @ Silicon Valley Fellowship, UC Berkeley CS, 1999, for academic excellence.

NSERC PGS-B Fellowship, 1997-1999, Canadian Federal Government, for academic excellence.
Canadian Space Agency NSERC Supplement, 1997-1999, for academic excellence.
NSERC PGS-A Fellowship, 1995-1997, Canadian Federal Government, for academic excellence.
Canadian Space Agency NSERC supplement, 1995-1997, for academic excellence.
Regent's Fellowship, UC Berkeley, 1995, graduate program entrance award.

Undergraduate Studies Awards

Computing Research Association Outstanding Undergraduate Researcher, 1995 (honorable mention).
Banks Scholarship, UBC, 1995, for academic excellence.
Rick Semple Memorial Award, UBC CS, 1995, awarded to a research intern.
McDonald Memorial Scholarship, UCB Physics, 1995, for excellence in physics.
NSERC Undergraduate Summer Research Grant, UBC, 1993 and 1994.
Science Scholar, UBC, 1993-1995, awarded to the top 20 students in the faculty of science.
Canadian Information Processing Society Award, 1993. Awarded to the top UBC Co-op student.
National Entrance Scholarship, UBC, 1990-1995, the top UBC entrance scholarship.
Canada Scholarship, Canadian Federal Government, 1990-1995.

Technology transfer and industrial experience

illumita, inc., 6/2006 – 6/2007: I cofounded this company to transfer virtualization technology out of the university. I took a 50% leave of absence from the university, and served as acting CEO and CTO to establish the company. I returned from my leave midway through the Spring '07 quarter.

Microsoft, inc. 7/2006. I served on an “alt-TAB,” a topic-specific technical advisory board, for Microsoft. This topic of this TAB was scalable architectures.

Isilon Systems, 4/2001 - present: I serve on the technical advisory board of this company, which is develops high-performance distributed storage systems designed for the needs of rich-media content delivery and hosting markets.

Silicon Chalk, Inc., 11/2000 - 2002: I helped to define the business and technical strategy of Silicon Chalk, a Vancouver, Canada based startup working on in-classroom educational technologies.

Proxinet, Inc., 06/1997 - 12/1998: This company was created for the aggressive technology transfer of the proxy computing technology that I helped develop at UC Berkeley. Proxinet has since been acquired by Puma Technologies.

Wink Communications, 06/1996 - 08/1996: I helped to transfer prototypes of the Berkeley BARWAN group's proxy technology into Wink's set-top box technology, thereby bringing the web to their interactive TV infrastructure.

Software releases: many of the research prototypes I have built have been released to the public, either as free software or as freely available Internet services. My releases include Top Gun Wingman, a graphical web browser for the Palm Pilot (<http://www.isaac.cs.berkeley.edu/pilot>), TranSend, a web accelerator proxy service, Parallelisms, a related web page locator, Sanctio, an instant messaging protocol and language translation proxy, and the Ninja service platform (<http://ninja.cs.berkeley.edu>). Wingman and TranSend have been particularly successful, having been adopted by tens of thousands of users during their lifetime. I have published several traces, including a Web trace gathered from the UC Berkeley dial-up modem pool (<http://ita.ee.lbl.gov/html/contrib/UCB.home-IP-HTTP.html>).

Grants

NSF Cybertrust, 2006-2009, \$948,723.39. Grant CNS-0627367, “CT-T: The Detection and Prevention of Spyware.” PI, Hank Levy is Co-PI.

NSF CNS, 2006-2008, \$700,000. Grant CNS 0614975, “CSR – PDOS: Simplifying Administration in the Outsourced Home.” Co-PI with Hank Levy.

Google research award, September 2005, \$90,000. “Domestic operating systems.” Co-PI with Brian Bershad and Hank Levy.

NSF Cybertrust, 2004-2007, \$450,000. Grant CNS-0430477, “OS Support for Application Installation, Execution, and Management in an Untrustworthy World.” PI.

Alfred P. Sloan Research Fellowship, 2004-2006. \$40,000.

NSF CAREER award, 2002-2007, \$499,290. Grant ANI-0132817, “Enabling New Network Applications and Distributed Systems using Mobile, Lightweight Protection Domains.” PI.

NSF ITR/SI, 2001-2004, \$780,000. Grant CCR-0121341, “ITR/SI: Adaptive Wide-Area Information Delivery.” Co-PI; Hank Levy is the PI.

NSF ITR, 2002-2004, \$790,000. Grant IIS-0205635, “ITR: (Software & Hardware Systems) Piazza: A Platform for Wide-scale Distributed Data Sharing and Integration.” Co-PI; Alon Halevy is the PI.

Nortel Corporation gift, 2000, \$65,000. To support research related to the Denali virtual machine monitor project. PI.

Intel Corporation gift, 2001-2003, \$260,000. To support research related to the Denali virtual machine monitor project. PI.

Award Papers

Nominated for forwarding to journal A Safety-Oriented Platform for Web Applications, by Richard S. Cox, Jacob Gorm Hansen, Steven D. Gribble, and Henry M. Levy. Proceedings of the 2006 IEEE Symposium on Security and Privacy, Oakland, CA, May 2006.

Best student paper Stefan Saroiu, Krishna P. Gummadi, Richard J. Dunn, Steven D. Gribble, and Henry M. Levy. An Analysis of Internet Content Delivery Systems. *Proceedings of the Fifth Symposium on Operating Systems Design and Implementation (OSDI 2002)*, Boston, MA, December 2002.

Best student paper Krishna P. Gummadi, Stefan Saroiu, and Steven D. Gribble. King: Estimating Latency between Arbitrary Internet End Hosts. *Proceedings of SIGCOMM IMW 2002*, Marseille, France, November 2002.

Best Paper Stefan Saroiu, P. Krishna Gummadi, and Steven D. Gribble. A Measurement Study of Peer-to-Peer File Sharing Systems. *Proceedings of Multimedia Computing and Networking 2002 (MMCN'02)*, San Jose, CA, USA, January 2002.

Best Paper, awarded out of all 2001 Journal of Computer Networks papers Steven D. Gribble et al., The Ninja Architecture for Robust Internet-Scale Systems and Services, *Journal of Computer Networks*, Volume 35, Issue 4, March 2001.

Professional Activities and Community Service

Program Committee “light” Member, ACM SIGCOMM 2007, August 2007.

Program Committee Member, 12th International Conference on Architecture Support for Programming Languages and Operating Systems (ASPLOS XII), October 2006.

Program Committee Member, 2006 Internet Measurement Conference, October 2006.

Program Committee Member, The International Conference on Dependable Systems and Networks (DSN-2006), June 2006.

Program Committee Member, 2006 IEEE Symposium on Security and Privacy, May 2006.

Program Committee Member, Third Symposium on Networked Systems Design and Implementation (NSDI '06), May 2006.

Program Committee Member, 13th Annual Network and Distributed System Security Symposium (NDSS 2006), February 2006.

Member of the NSF CISE advisory committee, 2003-2005.

Program Committee Member, Internet Measurement Conference, August 2005.

Program Committee Member, AAA-IDEA 2005, June 2005.

Program Committee Member, USENIX Annual Technical Conference, April 2005.

Program Committee Member, First Workshop on Real, Large Distributed Systems (WORLDS '04), December 2004.

Program Committee Member and Performance/Reliability track co-chair, the 13th International World-Wide Web Conference (WWW 2004), May 2004.

Program Committee Member, USENIX/ACM Symposium on Networked Systems Design and Implementation (NSDI '04), March 2004.

Program Committee Member, the 3rd International Workshop on Peer-to-Peer Systems (IPTPS 2004), February 2004.

Program Committee Member, Second ACM Workshop on Hot Topics in Networks (HotNets-II), November 2003.

Program Committee Member, Internet Measurement Conference 2003, October 2003.

Program Committee Member, the 2003 USENIX Annual Technical Conference, June 2003.

Program Committee Member, 9th Workshop on Hot Topics in Operating Systems (HotOS 2003), May 2003.

Program Committee Member, the Twelfth International World Wide Web Conference, May 2003.

Program Chair, the Fourth USENIX Symposium on Internet Technologies and Systems (USITS '03), March 2003.

Program Committee Member, Internet Measurement Workshop 2002, November 2002.

Program Committee Member, 1st International Workshop on Peer-to-Peer Systems (IPTPS '02), March 2002.

Program Committee Member and WIP Organizer, the Third USENIX Symposium on Internet Technologies and Systems (USITS '01), March 2001.

Publications and Publicity Chair, the Second IEEE Workshop on Internet Applications (WIAPP '01), July 2001.

Exhibit 2

The client-server architecture

In a client-server based system, there are two classes of hosts: servers and clients. A server provides service to a set of clients. Clients rely on the server for that service, and typically provide no service to each other or to the server. In the World-Wide Web, a popular Web server might consist of hundreds or thousands of computers within a data center, coordinated to serve Web pages to clients. A popular Web server might service millions of different clients each day.

Exhibit 3

A decentralized peer-to-peer network; each “P” represents a peer.

In a pure peer-to-peer network, there is only one class of host: the “peer.” Individual peers cooperate with each other to form a communal network that provides global service. In the diagram above, I show a peer in the bottom-left of the diagram that issues a query that is propagated across the network to several other peers. Peers that receive the query may choose to send a response back over the network. Note that individual peers may request service by issuing queries and provide service by generating responses, forwarding queries, or forwarding responses.

Exhibit 4

A hybrid network architecture. Each “U” represents an ultrapeer, and each “L” represents a leaf node.

In a hybrid architecture, some peers may play a more pronounced role in the network than others. In this diagram, “ultrapeers” manage the routing of queries on behalf of “leaf” nodes. A query initiated by a leaf node is handled by its ultrapeer; the ultrapeer may route the query to another leaf node, or forward it to other ultrapeers within the network. According to an April 2006 study¹, Gnutella had approximately 3 million peers and 0.5 million ultrapeers participating at any moment in time. A given ultrapeer usually services 15-45 leaf nodes, and coordinates with roughly 30 other ultrapeers. Any given leaf node typically relies on the services of between one and six ultrapeers.

A list of Gnutella-compliant client software packages, taken from Wikipedia
[\(<http://en.wikipedia.org/wiki/Gnutella>\)](http://en.wikipedia.org/wiki/Gnutella)

Wikipedia currently lists 20 different client software packages that are compatible with today's Gnutella network. Note that several of these software packages are derived from the open source LimeWire code base, while others are original works (i.e., implemented "from scratch.")

Exhibit 6

The dialog box presented to a LimeWire user the first time the user runs the software after installing it.

A LimeWire user is presented with this dialog box the first time she runs the LimeWire client software after having installed it. Unless the user clicks on the “I will not use LimeWire 4.18.3 for copyright infringement.”, they are not able to proceed and begin using the client software.
