EXHIBIT C

UNITED STATES DISTRICT COURT SOUTHERN DISTRICT OF NEW YORK

J.T. COLBY & COMPANY, INC., d/b/a BRICK TOWER PRESS, J. BOYLSTON & COMPANY PUBLISHERS LLC and IPICTUREBOOKS LLC,

Plaintiffs,

VS.

No. 11-cv-4060 (DLC)

APPLE, INC.,

Defendant.

VIDEOTAPED DEPOSITION OF E. DEBORAH JAY,
Ph.D, taken by Plaintiffs, pursuant to Agreement, at
the offices of Quinn Emanuel Urquhart & Sullivan
LLP, 51 Madison Avenue, New York, New York, on
Friday, November 30, 2012, commencing at 9:45 a.m.,
before Chandra D. Brown, a Registered Professional
Reporter and Notary Public within and for the State
of New York.

Job No: 27813

E.D. Jay - 11/30/12

received permission or approval to put out that product.

Q And how about affiliation confusion?

A I believe, as measured in an Eveready format, that they would believe that two products are -- come from the same source, that the makers, or the source of two products is related or they come from -- so if you go to the classic -- I ask the classic question, sometimes described as the gold Standard, the question in the Eveready where you ask respondents were shown, I think they were lamps and mini light bulbs, or actually two surveys in the Union Carbide case, and they were asked to name any other products put out by the concern that put out the product that they were shown.

So that's effectively the same question that I asked to find out whether there was an affiliation. So I asked the questions asked in Union Carbide, and supplemented them with an additional question which Professor McCarthy sometimes refers to as the standard format where you augment the Union Carbide formulation

E.D. Jay - 11/30/12

2002/07/

people who purchased digital books tend to be purchasers of a lot of books, and the majority of them also purchase hardback and paperback books. And the stimulus they would see would be virtually the same had they been showed a web page for a digital book.

I do find it completely unsupported that
Professor Jacoby claims that somehow purchasers
of digital books would be more likely to be
confused, because it doesn't appear that he's
read a lot about readers of digital books. PEW
Research Center has done extensive research,
and people who read digital books read more
books, on average, and they tend to purchase
and read books in multiple forms and not just
single forms.

So if I were to hypothesize, I would say that readers of digital books are more sophisticated. And, regardless, my universe certainly includes people who read digital books because the majority of people who read digital books also purchased hardcover and softcover books. And so to the extent that they would be thinking about books, it's clear

E.D. Jay - 11/30/12

hardcover or softcover books.

How about the converse; have you seen data showing what the percentage of people who buy hardcover and softcover books, what percentage of those also buy digital books?

A You can just look at the universe for buying books. And I believe the recent surveys have shown that about 72 percent of adults purchased a hardcover or softcover book in the last 12 months. So there's a large market for hardcover and softcover books. About 17 percent of adults purchased digital books. And based on data I've seen, is about two-thirds of the people who purchase digital books have also, or read softcover and hardcover books.

But if you're going to the universe of book buyers, no question, the largest universe for books are people who buy hardcover and softcover books. So many people who buy hardcover and softcover books do not buy digital books, but most people who buy digital books also buy hardcover and softcover books.

So to the extent the universe includes

E.D. Jay - 11/30/12

people who buy hardcover and softcover books, it would include people who buy digital books. A lot of people would not buy digital books, but that's merely because that's what the universe is. If you want to project your data to the majority of people who buy books in the United States, it is hardcover and softcover books.

Interestingly, if -- purchasers of digital, or people who have Apple products were more apt to be confused. I would have expected some differences by age, but yet young people were no more apt to mention Apple or an Apple product than were middle-aged adults and, rather than saying "older," let's just say mature adults, and that difference simply did not exist.

So I think I am ready for a break now.

- Q Just one final question.
- A Sure.

- Q The PEW data, is that referenced anyplace in your report?
- A No. It's not referenced in my report.

 I am a reader of PEW data. As I testified

E.D. Jay - 11/30/12

day, but I believe that that would be entirely inappropriate. You do not focus, when you do a survey in a trademark like confusion, respondents' attention on any particular portion of the product, of a label, of a page.

Rather, as we instructed, and I want to get the instructions clear, we said we wanted to show respondents a page in Instruction C.

I'm looking at deposition Exhibit 1, and it's Appendix B.

So we showed respondents the page. We asked people -- we told people: The page I'm going to show you concerns a book sold on the Amazon.com website. We told respondents to use the keyboard or mouse to look at or browse this page the way you normally do when you are deciding whether to buy a book.

We told them to take as long as they would like to look at or browse this page, and then we told them we were asking them questions about the book described on the page.

So we did not direct respondents' attention to the top of the paper, the bottom of page, any particular portion of the page.

2

E.D. Jay - 11/30/12

from a little while back, some respondents

3

answered the permission question, then, thinking in terms of the written material in

needed to give permission.

5

the book and the author as being someone who

6

MS. CENDALI: Objection.

8

A I don't think people talked about the written material in the book. There are some

9

people who said the author. I mean, I'm

11

confused about this because -- I'm not a

12

lawyer, but I understand there's a difference

13

between commercial speech and other forms of

14

speech. And this case, my understanding, is a

And the questions that I asked related to

15

trademark case relating to commercial speech.

16

what I believe are commercial speech. And we

18

did not ask questions about the inside of the

19

book. We asked about the book. And

20

respondents answered the way they answered.

21

That was just the way they answered.

22

Q Is the author someone who typically writes a book?

23

A Well, authors sometimes write the book.

25

Sometimes they have people write the book for

E.D. Jay - 11/30/12

them and they are listed as the author. So authors may or may not have written the book themselves. Many authors have written the book, but there are certainly instances of books that are, for the most part, written by somebody else but, nevertheless, the author is named, sometimes in connection with celebrities, sometimes for other reasons.

So the author, I think people often think of the author as the person who wrote the book, but the author doesn't always have to have written the book.

Q Calling your attention to Pages 28 and 29, of Volume I of Exhibit 1, and specifically to Tables 10 and 11, in the first column it reads: "Named specific authors or said, 'the author,' or, 'the editor.'"

Do you see that?

A Yes.

Q What if someone had said, "the writer"?
MS. CENDALI: Objection.

A I would have to see if somebody even said that. It's -- I don't know whether anybody actually said that.

E.D. Jay - 11/30/12

Q So in -- I'm looking now in Volume II, and the computer tabs -- I think this is

Appendix U, if memory serves. And it is

Table 33, Page 39.

You don't have a specific code, though, a separate code for the word "writer"; is that correct?

A Certainly not one that appears to be on this table.

Q For those respondents who answered the permission question, the Question 3 series in your study, in terms of, say, copyright law, their answers don't tell you anything about approval of the name "iBooks," do they?

MS. CENDALI: Objection.

A The purpose of the sponsorship questions are sponsorship of the product. The trier of fact will determine any legal issues relating to the use of the name. That is not a survey question. It's very leading, very suggestive.

And the issue, I believe, if you look at the standard format in Professor McCarthy's treatise -- and, again, I don't use his exact words because I'm a survey researcher and he is

where we developed, helped develop the questions for a community survey, even though we didn't actually conduct the survey or analyze the survey.

So we have sometimes developed questions. And certainly sometimes an entity could retain us to do one study, and then ask another entity or another individual to do the study but still use the questionnaire that we developed for the study that we did, and yet they retained another entity to do work.

I know we had done work in the high-tech field where certain computer companies would Here's the questions we ask when we work with such and such. We want you to replicate those questions. Field has replicated questions that other entities did. I have no doubt that some of those entities took the questions that we asked and replicated them using other entities for different reasons. But whatever the reasons that -- actually, I can give a good example because we developed the first survey for the county -- it's sort of a health inventory for the County of Los
