**Family Systems and Tong McCandless Group Sign Business Development Agreement**  
 Silicon Valley Consultants to Provide Marketing and Sales Services for International Web-Based Collaboration Tools Developer

August 21, 2001, San Francisco

Family Systems Ltd. has today signed a marketing/sales agreement with The Tong McCandless Group LLC of Silicon Valley, California. Under the agreement Tong McCandless will become the lead partner for marketing and selling the Family Systems™ range of collaboration and communications tools, including Family Systems iBook® software and MySharer™, the Family Systems web content publishing tool.

"After several years of development and testing, it is now time to launch the iBook and MySharer products," said Brian Reynolds, founder of Family Systems, Ltd. "The Tong McCandless Group offer the right combination of experience and business development perspective we need in our lead sales/marketing partner."

Together, the firms are preparing the worldwide launch of MySharer and the iBook family of products, which support individuals and distributed project groups as they work and live wherever they are. Family Systems also offers iBook-enabled Web sites to allow users to sponsor their own iBooks for their corporate project teams, distributed work groups, management teams, etc. iBooks are a way for non-technical users to become instant website publishers and share their work products with others.

"We have nothing but respect for the work done by the Family Systems development team, and are delighted to have the chance to participate in the launch of their first products," said Raymond Tong, founding partner of The Tong McCandless Group.

"Today, more than ever, organizations are looking for ways that distributed teams can work together effectively ... hold meetings, collaborate on documents, share research ... without having to travel excessively.

"The iBook and other Family Systems tools for work group collaboration are the best products we've seen for quickly developing project or client related web sites where all the documents, media files, and data relating to the workings of a department, board, committee, development team, or whatever, can be shared and jointly revised. Family Systems technologies let you collaborate using your existing everyday tools ... word processor, spreadsheet, fax machine, telephone ... and without making you learn yet another proprietary, complex new system, said Tong.

**About Family Systems**

Family Systems itself is a distributed technology research and development organization that makes extensive use of its own work group collaboration technologies. A wide variety of innovative contributors each operate from their home locations internationally. The intellectual property they create and manage -- software code, documentation, Web pages, and recorded conference calls -- is stored on book-enabled servers for web, fax and telephone content. To learn more about the Family Systems mission and solutions, visit [www.familysystems.com](http://www.familysystems.com). To find out more about the iBook family of products, visit [www.iBook.com](http://www.iBook.com).

**About The Tong McCandless Group**

Founded by software industry executives Raymond Tong and Mike McCandless, The Tong McCandless Group LLC (TMG) works with emerging enterprise software companies helping them to enter new markets and establish strong, sustainable sales operations and partnerships in the US and internationally.

## Family Systems Offers Radiant Communications Hosting Services for iBooks®

### Firms to Deliver Added-Value Web Hosting Services

June 4, 2001, San Francisco.

Family Systems Ltd. and Radiant Communications, Inc. have announced a web hosting services relationship at the Java One Conference. Radiant has been chosen by Family Systems as a web hosting partner for added-value websites featuring Family Systems iBook software.

Family Systems will resell the full range of Radiant web hosting services with add-ons specially designed for Family Systems customers. Radiant has comprehensive North American coverage, a Java-friendly environment, and an excellent customer service track record, said Howard Hinman of Family Systems. Customer service is critically important as our customers begin to launch iBook enhanced websites.

iBook enhanced sites offer personalized and easy to use control of website publishing and management for non-technical users. Executives, authors, developers, and other professionals can create and control totally interactive sites without having to know about complex file transfer operations or directory and file management. iBook software is the flagship in Family Systems iBook family of products, a suite of productivity tools and services for collaboration management. Other products include MyShare™, a starter level web robot that automatically publishes files to websites; Audio Recorder, a web-based system for recording and indexing telephone conference calls; and Fax Processor, for automated web publishing of faxed documents.

Radiant's business is based on making the Internet an effective tool for business by keeping IT simple, said Geoff Davenport, VP of Sales and Marketing at Radiant Communications. Family Systems has developed software that is a great value-added tool in making Internet technology accessible to everyone. We think there is a good fit between the objectives of the two companies and that this will lead to a successful partnership.

More information about the iBook Family of Products and the partnership between Radiant and Family Systems will be available at the Family Systems booth (Number 1124) at the JavaOne, June 4-8, 2001 at the Moscone Center in San Francisco. Family Systems has chosen this conference to launch their new iBook application (see separate press release).
