I, JOHN PAUL OSBORN, declare and state as follows:

1. I respectfully submit this declaration in support of Plaintiff's Opposition to Defendants' Motion for Expedited Discovery and Plaintiff's Cross-Motion for Mutual Expedited Discovery.

2. I have personal knowledge of the matters set forth in this Declaration.

3. I am a forensic document examiner with over 28 years experience. I maintain certification through the American Board of Forensic Document Examiners. I served as a member of the FBI/National Institute of Justice sponsored Scientific Working Group for Document Examination subcommittee for protocol development in my field, serving as interim Chairman in 1999. I have been retained by the United States Attorney's Office in the District of New Jersey and the Eastern and Southern Districts of New York, District Attorneys' Offices in several New York counties, and the state Attorney General's Offices in both New Jersey and New York. I also have been retained

by numerous large corporations, brokerage houses, commodity exchanges, insurance companies and well recognized law firms. I have been retained in matters for the Legal Aid Society of New York, St. John's University School of Law Elder Law Clinic, Georgetown University Center for Applied Legal Studies and other non-profit legal service groups and agencies, as well as in cases for indigent criminal defendants in federal courts. I am a voting member of the American Society for Testing and Materials Committee E-30 (Forensic Sciences), the American Academy of Forensic Sciences, the American Society of Questioned Document Examiners (a former Director, former Treasurer and current Secretary of that organization), the Northeastern Association of Forensic Scientists, and the New Jersey Association for Forensic Scientists. A true and correct copy of my curriculum vitae is attached hereto as Exhibit A.

4. I was asked to examine a signed version of the "Work For Hire" Contract between Paul Ceglia, StreetFax LLC and Mark Zuckerberg dated April 28, 2003 (the "Agreement") for purposes of determining whether or not it bears original writing and analyzing its authenticity. A copy of the Agreement is attached hereto as Exhibit B.

5. Section 3 on the first page of the Agreement has interlineations with the handwritten initials "PC" and "MZ" next to the interlineations. The second page of the agreement bears two handwritten signatures and hand printed dates to the right of each signature. I was able to determine that all of the handwriting and hand printing on the two pages of the Agreement are original writing ink on paper entries.

6. My work, thus far, also consisted of conducting examinations to determine, if possible, whether or not the second page of the Agreement bears indentations or impressions and to determine, if possible, the source of any existing

impressions or indentations. I was aware that, should the second page of the Agreement bear indentations caused by the interlineations and handwritten initials on the first page of the Agreement, then the second page of the Agreement necessarily was underneath the first page of the Agreement when the interlineations and initials were written.

7. I made two types of examinations. First, I examined the second page of the Agreement utilizing oblique lighting in an attempt to determine whether or not the second page of the Agreement contained indentations and to attempt to identify the source of those indentations. This technique utilizes light glanced across the surface of paper and may cause indentations or impressions to become more readily visible because of the shadows which are caused by the acutely angled lighting. What is examined can then easily be photographed. My examinations revealed that the second page of the Agreement had indentations that were caused by the interlineations and handwritten initials on the first page of the Agreement.

8. Second, I used a Foster and Freeman Electrostatic Detection Apparatus (“ESDA”). ESDA and other indentation materialization devices are conventional tools used by forensic document examiners worldwide to detect and record latent indentations in paper. Testing is both very sensitive and non-destructive. The result of the ESDA tests I performed also revealed that the second page of the Agreement bears indentations caused by the interlineations and handwritten initials on the first page of the Agreement.

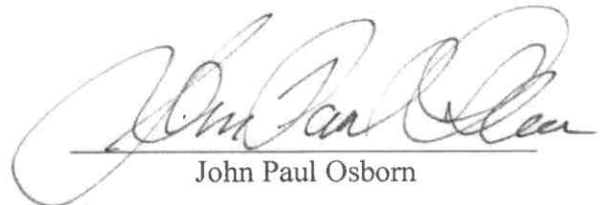

9. The only indentions which I observed on the second page of the Agreement were those revealed by my examinations and which matched and were caused by the interlineations and initials on the first page of the Agreement.

10. Based on my examinations and observations, I conclude that the second page of the Agreement was underneath the first page of the Agreement when the interlineations and handwritten initials were made on the first page of the Agreement.

11. It is my understanding that chemical analysis to attempt a determination of the age of the ink used in the interlineations and initials on the first page of the Agreement and the signatures on the second page of the Agreement would require partial destruction of the interlineations and initials on the first page of the Agreement and the signatures on the second page of the Agreement. This kind of analysis is typically performed by a subspecialist in my field, commonly referred to as a forensic ink chemist. I while I am trained to appropriately extract the ink samples from the paper, under the guidance of a forensic ink chemist, I am not trained to perform the analysis itself.

I declare under the penalty of perjury that the foregoing is true and correct.

Executed in Middlesex, New Jersey on June 16th, 2011.
