Subject: RE: Rockstar v. Google: Expert Disclosures

Andrea,

We have not received a response to our inquiry on Friday regarding source code. We intend to have Jay Bhatia—whom we disclosed on Friday and who previously has been approved to review Google source code in other matters—review source code on July 9-11, 2014. Please confirm that you will make the following available on those dates pursuant to the Protective Order:

Source Code: We expect Google to produce all source code relating to functionalities identified in Plaintiffs' infringement contentions, including but not limited to source code relating to AdWords, AdSense, Ad Server (release software), GWS (Google Web Server), GFE (Google Front End), Google Search Request and Google Search Response Objections, Google and Double-Click cookies, and search ranking, and any other source code relating to functionalities identified in Plaintiffs' infringement contentions.

Review Computers: We expect that source code review stations will be based on MS Windows operating system and that the stations should have sufficient memory (8GB+ each) to conduct search effectively. We also expect the following tools to be installed, all of which have cost-free licenses and can be downloaded from the below URLs:

- CYGWIN (<http://www.cygwin.com/>) and the following additional packages:
 - <http://cygwin.com/packages/less>
 - <http://cygwin.com/packages/findutils>
 - <http://cygwin.com/packages/grep>
 - <http://cygwin.com/packages/vim>
- Eclipse as IDE (<https://www.eclipse.org/downloads/>)
- Notepad++ (<http://notepad-plus-plus.org/download/v6.6.7.html>)
- Effective File Search (<http://www.sowsoft.com/search.htm>)
- To the extent any files produced are in Microsoft Office format, MS office must be included
- Google Chrome (<https://www.google.com/intl/en-US/chrome/browser/>)

Please confirm by tomorrow that Google intends to make the above available on the dates requested and let us know the location where Google intends to make its source code available for review.

Thank you,

Amanda
