DEBIT CARD DIRECTORY

C10

Introduction

The use of debit cards, particularly at the point of sale, continues to be one of the most remarkable business stories of the decade.

Introduced in the 1970s, the debit card has traced an uncertain arc across the landscape of retail payments. Its story has been a long, painful, and frustrating odyssey full of overheated expectations, overweening ambitions, and overhyped predictions. Because it never seemed to live up to its backers' expectations, the debit card was dismissed for years as experimental by observers of mainstream banking. Banks, meanwhile, had made a cash cow out of credit cards, and this is where they lavished their resources and attention. Only retail-banking specialists—and bankers determined to develop a card that could replace checks with electronic transactions—looked long and hard at debit.

But beneath the surface, largely unreported except in the specialty press, much was happening with debit cards. Slowly, EFT networks began adding POS functionality to their ATM cards, and banks began signing up merchants—mostly gas stations and supermarkets—to take the plastic. After much wrangling with each other and with antitrust watchdogs, Visa and MasterCard created national POS networks. And, with the strong sponsorship of these two national brands, banks started issuing a type of debit card whose transactions traveled on the credit card systems and cleared in two or three days rather than in a matter of hours. This so-called off-line debit card caught the imagination of banks, largely because it paid interchange fees high enough that they saw a way to make money with it.

At the same time, EFT networks were merging at a furious clip, patching together disparate and fragmented

debit card bases into super-regional systems with appeal to merchants that wanted to reach all or most of their customers. Now retailers that had for years sat on the sidelines while debit struggled began to sign on to take the plastic.

The ingredients for explosive growth were there, though they had surely come together much more deliberately than enthusiasts and futurists had predicted in the 1970s and '80s. So it should have come as no surprise when, in the early '90s, debit cards caught fire, scoring one statistical breakthrough after another. Transactions and terminal deployments soared at dizzying rates. The pundits were, at last, vindicated.

But the story doesn't end there, as readers of this third annual edition of the *Debit Card Directory* will soon discover. True, POS transaction volumes for both on-line and off-line cards continue to climb at a breakneck pace, and the terminal population continues to grow rapidly (see Chapter One). But what's important now isn't so much that debit cards are a hot banking property—that's already well-known and documented—but that the plastic is moving quickly and surely out of its traditional markets and into new ones that offer huge potential, largely because they remain untapped.

For years, debit was the property of the West Coast, geographically, and of gas stations and grocery stores, with respect to merchants. In 1995, debit cards started to move east (for more on this, see Chapter Two) and to move into specialty shops, fast-food outlets, electronics chains, and the like. Eight of the 10 fastest-growing POS networks lie east of the Rockies—and their growth is hardly exhausted. "We've only scratched the surface of POS," John Bascom, president of the

DEBIT CARD DIRECTORY**Debit Card 2000**

Michigan-based Magic Line network told *Debit Card News* in September. That's saying something, considering Magic Line's June 1995 POS volume was up 77% over the previous June.

To be sure, debit isn't done claiming major merchants in its traditional markets. Both Shell Oil and Vons Supermarkets rolled out programs in the past year. What's more, networks are finally putting promotional firepower behind their POS programs, which promises to push debit cards into the hands of even more users and into an even bigger variety of merchants.

For a complete analysis of debit's development, merely turn to the chapters that follow. This 1996 edition relies, as did its two predecessors, on a number of Faulkner & Gray publications, including *Debit Card*

News (formerly *POS News*), *Bank Network News*, and the *Card Industry Directory*. New to the book this year, however, are a special report on electronic benefits transfer (Chapter Ten), an update on last year's white paper on home banking (Chapter Eleven), and expanded data, notably in Chapter Seven, where the list of top acquirers has grown from 15 to 24.

As always, the editor thanks the contributing editors for their diligence and keen understanding of the way debit cards work and where they are going. Their efforts have proven invaluable in putting this book together. Partly because of their ability to tell, in clear terms, the story of debit's sudden explosion on the payments scene, predictions by bank executives for the future no longer seem so outlandish.

Statistical Tabulations

Few businesses lend themselves to measurement, to statistical monitoring, as much as debit cards. The business generates enough numbers to satisfy the most exacting figure filbert. Lately, these numbers have proved satisfying to debit card issuers and acquirers, as well, particularly when it comes to payment at the point of sale.

Take a look at POS transactions, the most immediately cited measure of debit's performance, since it goes to the heart of how well the cards are being used and accepted to pay for goods and services. As you'll see in the charts that follow, annual volume on on-line cards in 1995 is expected to hit 775 million, up 37% over 1994. That's even faster than 1994's 32% growth pace, and the 1995 total is up an eye-popping 168% just since 1992.

Off-line debit is doing even better. As of June 1995, nearly 2,500 banks issued these cards, and monthly transaction volume stood at 57.5 million, up 46% over June 1994.

The deployment of merchant terminals to accept debit cards continues to shoot up, as well. As of June, 528.7 million such devices had been hooked up, an increase of 54% over the June 1994 figure. As robust as

that increase looks, it actually represents a slowdown from the torrid pace of June 1993 to June 1994, when the terminal population leapt 122%.

Gas stations and groceries once dominated debit because they dominated the deployment of terminals, but now debit acceptance is moving rapidly into other merchant categories, a trend borne out by the numbers. Supermarket terminals climbed 27%, but account for 45% of all machines, down from 54% a year ago. Fast-food outlets, boutiques, specialty stores, and other merchants that fall into the "other" category saw their deployment mushroom 111% and now account for 17% of all debit devices, up from 11%.

To be sure, debit faces challenges aplenty (see Chapter Nine for a full catalog of these). Skeptics, indeed, might point to the slowdown of terminal growth, though this is more related to the movement of debit's momentum away from maturing West Coast markets (documented in the next chapter) than to anything else. The fact that debit card usage and acceptance are moving so rapidly into new geographic and merchant markets is another sign that the payment device is going mainstream. Need further proof? Just look at the numbers.

Why choose between timely reporting and in-depth analysis — when one card industry resource delivers *both!*

CREDIT CARD NEWS is *everything* you need it to be!

In your fast-paced industry, it's more important than ever that you be up to date on late-breaking trends, developments and opportunities. And up to speed on what they *mean* to you. Unfortunately, you probably don't receive the information and analysis you need until it's too late! Days, weeks, sometimes months after it could have helped you to fine tune a marketing plan, avoid acostly legal pitfall, or pre-empt a competitor.

That's why we urge you to discover CREDIT CARD NEWS, a timely, affordable source of late-breaking industry intelligence *and* leading-edge industry analysis. Each twice monthly issue delivers concise news briefs, in-depth features and authoritative commentary — ensuring that you're up to date and *up to speed* in the areas that concern you most:

- ✔ **Competitive activity.** You'll be among the first to learn of competitors' marketing, promotion and advertising plans. Keep CREDIT CARD NEWS in easy reach as you develop or adjust *your* strategies.
- ✔ **Legal and regulatory developments.** You'll be fully briefed on new and imminent card-related laws, regulations and court decisions, at both the federal and state level.
- ✔ **Market and acquisition opportunities.** From the hottest niche markets to the hottest portfolio offerings, CREDIT CARD NEWS ensures that you won't miss out on new profit opportunities!

The Struggle to Give Credit to Smart Cards

There's been a real wave of news at the year-end since the banking industry unveiled the United States for smart cards, one form of it has been obvious connection with revolving credit. When people talk about smart cards—cards containing a micro memory chip or microprocessor that can hold far more information than today's magnetic-strip cards can—they usually talk about credit cards or debit cards. Though some smart cards are indeed used with revolving credit accounts, the smart credit card almost seems to be an afterthought in the U.S.

But even so, the card industry says it's only a matter of time before revolving credit cards begin to share in the smart card boom. "The key words are 'not yet,'" says Richard M. Rubin, Visa International senior vice president of consumer credit products. "We're still very much at the early, discovery stage." He notes that Visa, MasterCard, and SmartCard's European partner, Europay, only last late year announced operational considerations.

Competition

The Optima Family Adds Some New Members

Who's launched the Optima The Credit Card Club, American Express Co. presented the card one year after the first in a series of new products designed to boost AmEx's revolving credit creditable loss above \$8 billion to \$10 billion by the end of the decade. Now, AmEx is keeping the pressure. The credit-card-contractment giant within the past few weeks quietly started making applications for several new Optima cards, including gold cards with no annual fees.

AmEx says the number of cards being issued is more than three times that of 10. The right-most company would not discuss solicitations beyond the three received by Credit Card News staff members, nor would it say which ones ultimately will be rolled out. You will AmEx reveal the size of the mailings, other than to say they are considerable. Some are going to AmEx cardholders but most are going to new prospects.

AmEx says that while the company risks consolidation of higher fee charge cards, AmEx indeed needs to broaden its card offerings. "They're doing the right thing," says Thomas P. Francis, vice president of equity research at Salomon Bros. Inc., "American Express's problem was they were a non-product company."

Not only has AmEx had a limited number of card offerings, but the core charge card line is still shrinking. AmEx stopped disclosing separate U.S. charge card numbers in 1994's fourth quarter. continued on page 11

EFT executives and managers: Take this risk-free opportunity to discover BANK NETWORK NEWS—or risk falling behind!

BANK NETWORK NEWS can help you to stay one step ahead in your increasingly competitive and rapidly-evolving field.

Because **BANK NETWORK NEWS** ensures that you're fully briefed on late-breaking technological, market and regulatory developments—and their strategic implications—long before your competitors have even heard the news! **BANK NETWORK NEWS** delivers more proprietary EFT statistics and data than any competing publication. And, most important, **BANK NETWORK NEWS** delivers in-depth reports and expert analysis that will inform and enhance a wide range of strategic decisions—from how to price and market EFT, POS and debit products, to when and how to upgrade ATM terminals. In the critical months ahead, rely on **BANK NETWORK NEWS** for action-oriented coverage of:

- ✓ Industry trends and developments
- ✓ Competitive activity
- ✓ New products, markets and profit opportunities

Receive the 1995 and 1996 EFT NETWORK DATA BOOKS—worth \$190—absolutely free!

If after reviewing your risk-free examination issue of **BANK NETWORK NEWS** you choose to honor our invoice, we'll rush your copy of Faulkner & Gray's acclaimed 1995 **EFT NETWORK DATA BOOK**. Plus, you'll receive the updated 1996 *Edition* immediately upon release in November. The perfect complement to your **BANK NETWORK NEWS** issues, these quick-reference guides are packed with hard-to-find data on today's top EFT networks, debit card issuers, ATM deployers and more!

The Leading Source of News and Analysis on the EFT Industry

Bank Merger Reignites Network Merger Talk

Met a one-year hiatus of network merger discussions, the industry once again has captured the EFT spotlight with the proposed merger of First Chicago Corp. and NBD Bancorp, the merger of Cash Station and Magic Line—the largest and the largest regional EFT networks, respectively—could be back in the picture.

Earlier this month, First Chicago Corp. and NBD Bancorp joined the banking industry with the announcement of a proposed \$1.2 billion merger. While the merger would combine 750,000 ATM's in the company with assets of \$1.2 billion, many industry participants are watching the merger's effect on Cash Station and Magic Line. Some observers believe the First Chicago/NBD Bancorp merger will result in a Cash Station/Magic Line merger, while others believe one of the networks could fold.

"This will change the competitive EFT landscape in the Midwest," says Rich and Spoor, president of Spoor & Associates, an Atlanta-based EFT consulting firm. "You're taking the largest owner of Cash Station and merging it with one of the largest owners of Magic Line. There seems to be a gravitational pull between the two networks."

Talk of network mergers in the Midwest are nothing new, but the First Chicago/NBD Bancorp marriage gives new evidence of a need for further consolidation in the EFT industry. Seeking to streamline the operations of member financial institutions, Cash Station and Magic Line announced plans to merge in early 1993. The move was seen as an attempt to prevent Delaware-based Electronic Payment Services from moving into the Illinois, Michigan and Indiana markets.

But plagued by problems on how the new network should be run, the negotiations fell apart by late 1993. Magic Line, for instance, reportedly wanted stronger control and decision-making by its board of directors, while Cash Station preferred that the network be run by a hired executive. But now that First Chicago and NBD Bancorp plan to merge, even network executives admit the two networks could once again meet at the bargaining table.

"With the consolidation of First Chicago and NBD Bancorp, it's very logical for Cash Station and Magic Line to get back together for merger discussions," says Stephen Cole, Cash Station president. "We suspended our earlier discussions with The High Clearpoint of a second chapter. This merger may be the impetus for a second round of negotiations." John Bascom, Magic Line president, is quoted on page 4.

Technology

EFT Networks Won't Surf The Internet

Credit card and off-line debit card transactions already have begun to travel the Internet and other on-line computer networks as banks, vendors and the payment associations develop technology to make Internet payment secure. But don't look for on-line debit cards to join the rush anytime soon.

The reason? Steve Kish, director of sales for Virginia-based CyberCash, Inc., calls the on-line concept a "high-tech, high-risk venture."

While the merchant that most cannot schedule merchants that most cannot EFT network rules require that for cards with their marks to be accepted at retail locations, a card must be input to an authorized terminal and the customer must enter a personal identification number. That would preclude the use of cards on the Internet where a host's personal computer typically isn't fixed (continued on page 4)

- ✓ Groundbreaking EFT and POS technology
- ✓ Legal and regulatory initiatives
- ✓ Marketing strategies and techniques
- ✓ And much more!

POS Networks

As this ranking of the largest POS networks shows, two themes dominate the world of debit cards at the point of sale. One is old, the other not so old: network consolidation (old) and the rise of regional networks east of the Rockies (new).

Time was when debit card purchases mostly took place a few miles from cardholders' homes at gas stations and groceries. Since debt activity was so locally concentrated, networks were small and seldom covered more than one or two states. And nearly all the POS traffic flowed across the western states, with California networks like Explore and Interlink leading the pack.

Now, there are fewer networks covering more territory as a result of years of mergers and acquisitions. Debit activity is still a local business, even though Visa's Interlink and MasterCard's Maestro systems have made strides in their efforts to switch transactions nationally (a solid assessment is difficult, since MasterCard persists in refusing to reveal transactions for Maestro), but today the fastest-growing POS networks lie along the East Coast and in the Midwest.

The emergence of super-regional networks stitch-

ing together once fragmentary debit card bases has induced more and more merchants to take debit. Nowhere, perhaps, has this been truer than in markets east of debit's old Washington-California-Arizona base. The most prominent example is NYCE, which once covered only New Jersey, New York, and Pennsylvania. Now, as a result of a merger in June 1994 with Yankee 24, NYCE also covers the New England states, and ranks as the fastest-growing POS system, with a 194% jump in monthly transactions. Merchants now taking NYCE cards include Mobil and A&P.

Indeed, eight of the 10 fastest-growing networks cover territory east of California. Besides NYCE, they are Money Station, Jeanie, Magic Line, Kets, EFTI, Pulse, and Most. You'll find all of them in the list that follows, which ranks networks by monthly POS transactions. Not that the West Coast is losing all its old POS momentum: Instant Teller's monthly transactions grew by 67%, and those of Explore by 60%. But clearly the eastern markets, driven by the trend toward consolidation, are catching up in a hurry.

EFT Networks

Here are many of the same networks from Chapter Two, now ranked according to total transaction volume for September 1995. This ranking thus includes automated-teller transactions as well as payments at the point of sale, with data on terminals by type—ATM or POS, including how many ATMs are installed off bank premises in stores, malls, etc.—and a breakdown of transactions into those on ATMs and those on POS terminals. Ranked are the 50 largest regional systems.

More than any other, this ranking underscores the value of network brands. The top-line, total transaction number includes all transactions (deposits, withdrawals, transfers, payments, and balance inquiries) performed on machines hooked into the network, not just those passing through the network's data center. Hence, this number captures the real strength of the network, more so than the number of data-center transactions (shown in the "switch" line in the transaction analysis).

Another litmus-test indicator of the network's performance is the interchange percentage, shown in the transaction analysis. This is the portion of total volume stemming from cardholders' use of terminals belonging to banks other than their own. Banks' fees for so-called foreign transactions influence interchange, of course, but the number does give a clear indication of the extent to which cardholders recognize network marks.

This ranking remains relatively stable from year to year, but there are a number of networks to watch, even among the giants. In 1993, number-one Star System became the first network to break the 100-million barrier in monthly transactions, and it remains comfortably in first place. But this year, NYCE and MAC joined that exclusive club, with NYCE displacing MAC as number two. And don't neglect Cash Station, whose sizzling 75% growth rate was enough to vault it fully six places into the top 10.
