

Exhibit 3

BEDROCK COMPUTER TECHS., LLC V. SOFTLAYER TECH. SOLUTIONS, LLC, ET. AL
 PLAINTIFF’S P.R. 3-1 INFRINGEMENT CONTENTIONS¹

	Claim Language	Accused Instrumentalities: Computer equipment configured with or utilizing software based on Linux kernel version 2.6.18
1.	An information storage and retrieval system, the system comprising:	<p>Bedrock Computer Technologies LLC (“Bedrock”) does not express a position at this time as to whether the preamble of this claim limits the claim’s scope. Nevertheless, Bedrock identifies below aspects of the Accused Instrumentalities that correspond to the claim preamble.</p> <p>When Google makes, uses, sells, offers to sell or imports (or actively induces or contributes to same) computer equipment configured with or utilizing software based on Linux kernel version 2.6.18, Google makes, uses, sells, offers to sell or imports (or actively induces or contributes to same) a system that is especially adapted for information storage and retrieval.</p> <p>In the event this preamble is construed so as to be not literally present in the Accused Instrumentalities, Bedrock would alternatively contend that the Accused Instrumentalities meet the recited limitation under the doctrine of equivalents, because any purported differences between this preamble and the aforementioned features of the</p>

¹ The contentions contained in this chart are based on functionality observable through the open source versions of Linux that are publicly available. **All of the limitations of the asserted claims of the ’120 patent include features that relate to software of the Accused Instrumentalities. The actual source code of Linux that is installed on Google servers and other device(s) is not publicly available and has not yet been produced for inspection. Bedrock reserves the right to supplement or modify these contentions once Google has produced this code and Bedrock has completed its review of the source code.**

Bedrock’s identification of specific routines is not intended to identify all of the code necessary to satisfy the claim limitation at issue. Other source and/or object code components, such as routines, functions, methods, macros, classes, data structures, libraries etc. may be necessary. Furthermore, these identified code components may be called by or call other code components. Also, the code components identified are normally the first or the most relevant in a series of code components and are intended to reference the entire function path. Bedrock reserves its right to provide additional detail in its expert report according to the schedule set by the Court.

	Claim Language	Accused Instrumentalities: Computer equipment configured with or utilizing software based on Linux kernel version 2.6.18
		Accused Instrumentalities would be insubstantial. For example, the aforementioned features of the Accused Instrumentalities would perform substantially the same function, in substantially the same way, to achieve substantially the same result, as the recited limitation.
(a) ²	a linked list to store and provide access to records stored in a memory of the system, at least some of the records automatically expiring,	<p>When Google makes, uses, sells, offers to sell or imports (or actively induces or contributes to same) computer equipment configured with or utilizing software based on Linux kernel version 2.6.18, Google makes, uses, sells, offers to sell or imports (or actively induces or contributes to same) a system that is especially adapted to include a linked list to store and provide access to records stored in a memory of the system, at least some of the records automatically expiring.</p> <p>Within Linux kernel version 2.6.18, the data structure <code>rt_hash_table</code> in module <code>/net/ipv4/route.c</code>³ anchors one or more linked list(s) to store and provide access to records stored in a memory of the system, at least some of the records automatically expiring. In this way, computer equipment configured with or utilizing software based on 2.6.18 includes a linked list to store and provide access to records stored in a memory of the system, at least some of the records automatically expiring.</p> <p>The following code excerpts from the files <code>/net/ipv4/route.c</code> and <code>/include/net/route.h</code> show the C language definition for the data structure <code>rt_hash_table</code> and the <code>rtable</code> struct definition used by <code>rt_hash_table</code>:</p> <pre>struct rt_hash_bucket {</pre>

² While the limitations are not lettered in the actual claims of the patent, Bedrock provides them here for ease of reference.

³ The path names of the cited source code is provided for the defendants' convenience. If any version or customization of Linux kernel version 2.6.18 deviates from the path names that are cited in these charts, such deviations are insignificant because it is the routines, functions, methods, macros, classes, data structures, etc., as embodied on servers and other devices, that infringe.

	Claim Language	Accused Instrumentalities: Computer equipment configured with or utilizing software based on Linux kernel version 2.6.18
		<pre> struct rtable *chain; }; **** static struct rt_hash_bucket *rt_hash_table; **** struct rtable { union { struct dst_entry dst; struct rtable *rt_next; } u; struct in_device *idev; unsigned rt_flags; __u16 rt_type; __u16 rt_multipath_alg; __u32 rt_dst; /* Path destination */ __u32 rt_src; /* Path source */ int rt_iif; /* Info on neighbour */ __u32 rt_gateway; </pre>

	Claim Language	Accused Instrumentalities: Computer equipment configured with or utilizing software based on Linux kernel version 2.6.18
		<pre data-bbox="856 310 1751 558"> /* Cache lookup keys */ struct flowi fl; /* Miscellaneous cached information */ __u32 rt_spec_dst; /* RFC1122 specific destination */ struct inet_peer *peer; /* long-living peer info */ }; </pre> <p data-bbox="760 602 1780 630">Source: Linux kernel source code files /net/ipv4/route.c and /include/net/route.h</p> <p data-bbox="760 675 1892 959">In the event this limitation is construed so as to be not literally present in the Accused Instrumentalities, Bedrock would alternatively contend that the Accused Instrumentalities meet the recited limitation under the doctrine of equivalents, because any purported differences between this limitation and the aforementioned features of the Accused Instrumentalities would be insubstantial. For example, the aforementioned features of the Accused Instrumentalities would perform substantially the same function, in substantially the same way, to achieve substantially the same result, as the recited limitation.</p>
(b)	a record search means utilizing a search key to access the linked list,	<p data-bbox="760 1008 1892 1182">When Google makes, uses, sells, offers to sell or imports (or actively induces or contributes to same) computer equipment configured with or utilizing software based on Linux kernel version 2.6.18, Google makes, uses, sells, offers to sell or imports (or actively induces or contributes to same) a system that is especially adapted to include a record search means utilizing a search key to access the linked list or its equivalent.</p> <p data-bbox="760 1227 1892 1399">Specifically, code contained within functions ip_route_input_mc, ip_mkroute_input_def, ip_mkroute_input, ip_route_input_slow, ip_mkroute_output_def, ip_mkroute_output, and/or ip_rt_redirect in module /net/ipv4/route.c calls functions rt_hash and rt_intern_hash. In this way, computer equipment configured with or utilizing software based on Linux kernel version 2.6.18 includes a record search means</p>

	Claim Language	Accused Instrumentalities: Computer equipment configured with or utilizing software based on Linux kernel version 2.6.18
		<p>utilizing a search key to access the linked list or its equivalent.</p> <p>In the event this limitation is construed so as to be not literally present in the Accused Instrumentalities, Bedrock would alternatively contend that the Accused Instrumentalities meet the recited limitation under the doctrine of equivalents, because any purported differences between this limitation and the aforementioned features of the Accused Instrumentalities would be insubstantial. For example, the aforementioned features of the Accused Instrumentalities would perform substantially the same function, in substantially the same way, to achieve substantially the same result, as the recited limitation.</p>
(c)	<p>the record search means including a means for identifying and removing at least some of the expired ones of the records from the linked list when the linked list is accessed, and</p>	<p>When Google makes, uses, sells, offers to sell or imports (or actively induces or contributes to same) computer equipment configured with or utilizing software based on Linux kernel version 2.6.18, Google makes, uses, sells, offers to sell or imports (or actively induces or contributes to same) a system that is especially adapted to include a record search means, the record search means including a means for identifying and removing at least some of the expired ones of the records from the linked list when the linked list is accessed or its equivalent.</p> <p>Specifically, code contained within function <code>rt_intern_hash</code>, as invoked by functions <code>ip_route_input_mc</code>, <code>ip_mkroute_input_def</code>, <code>ip_mkroute_input</code>, <code>ip_route_input_slow</code>, <code>ip_mkroute_output_def</code>, <code>ip_mkroute_output</code>, and/or <code>ip_rt_redirect</code> in module <code>/net/ipv4/route.c</code>, comprises record search means including a means for identifying and removing at least some of the expired ones of the records from the linked list when the linked list is accessed or its equivalent.</p> <p>The following code excerpt from the <code>rt_intern_hash</code> function is an example of a record search means which includes a means for identifying and removing at least some of the expired ones of the records from the linked list when the linked list is accessed or its equivalent:</p>

	Claim Language	Accused Instrumentalities: Computer equipment configured with or utilizing software based on Linux kernel version 2.6.18
		<pre> rthp = &rt_hash_table[hash].chain; spin_lock_bh(rt_hash_lock_addr(hash)); while ((rth = *rthp) != NULL) { #ifdef CONFIG_IP_ROUTE_MULTIPATH_CACHED if (!(rth->u.dst.flags & DST_BALANCED) && compare_keys(&rth->fl, &rt->fl)) { #else if (compare_keys(&rth->fl, &rt->fl)) { #endif **** if (!atomic_read(&rth->u.dst.__refcnt)) { u32 score = rt_score(rth); if (score <= min_score) { cand = rth; candp = rthp; min_score = score; } } **** chain_length++; </pre>

	Claim Language	Accused Instrumentalities: Computer equipment configured with or utilizing software based on Linux kernel version 2.6.18
		<pre> rthp = &rth->u.rt_next; } **** if (cand) { /* ip_rt_gc_elasticity used to be average length of chain * length, when exceeded gc becomes really aggressive. * * The second limit is less certain. At the moment it allows * only 2 entries per bucket. We will see. */ if (chain_length > ip_rt_gc_elasticity) { *candp = cand->u.rt_next; rt_free(cand); } } </pre> <p>Source: Linux kernel source code file /net/ipv4/route.c</p> <p>Note that the record(s) identified as expired upon traversal of the linked list is not necessarily the record that rt_intern_hash was called to find.</p> <p>In the event this limitation is construed so as to be not literally present in the Accused Instrumentalities, Bedrock would alternatively contend that the Accused Instrumentalities meet the recited limitation under the doctrine of equivalents, because any purported differences between this limitation and the aforementioned features of the Accused Instrumentalities would be insubstantial. For example, the aforementioned features of the Accused Instrumentalities would perform substantially the same function,</p>

	Claim Language	Accused Instrumentalities: Computer equipment configured with or utilizing software based on Linux kernel version 2.6.18
		in substantially the same way, to achieve substantially the same result, as the recited limitation.
(d)	means, utilizing the record search means, for accessing the linked list and, at the same time, removing at least some of the expired ones of the records in the linked list.	<p>When Google makes, uses, sells, offers to sell or imports (or actively induces or contributes to same) computer equipment configured with or utilizing software based on Linux kernel version 2.6.18, Google makes, uses, sells, offers to sell or imports (or actively induces or contributes to same) a system that is especially adapted to include means, utilizing the record search means, for accessing the linked list and, at the same time, removing at least some of the expired ones of the records in the linked list or its equivalent.</p> <p>Specifically, the functions <code>ip_route_input_mc</code>, <code>ip_mkroute_input_def</code>, <code>ip_mkroute_input</code>, <code>ip_route_input_slow</code>, <code>ip_mkroute_output_def</code>, <code>ip_mkroute_output</code>, and/or <code>ip_rt_redirect</code> in module <code>/net/ipv4/route.c</code>. include means, utilizing the record search means, for accessing the linked list and, at the same time, removing at least some of the expired ones of the records in the linked list or its equivalent.</p> <p>The following code excerpt is one example of the <code>rt_hash</code> and <code>rt_intern_hash</code> functions being called by the function <code>ip_route_input_mc</code>:</p> <pre> hash = rt_hash_code(daddr, saddr ^ (dev->ifindex << 5)); return rt_intern_hash(hash, rth, (struct rtable**) &skb->dst); </pre> <p>Source: Linux kernel source code file <code>/net/ipv4/route.c</code></p> <p>In the event this limitation is construed so as to be not literally present in the Accused Instrumentalities, Bedrock would alternatively contend that the Accused Instrumentalities meet the recited limitation under the doctrine of equivalents, because any purported differences between this limitation and the aforementioned features of the Accused Instrumentalities would be insubstantial. For example, the aforementioned</p>

	Claim Language	Accused Instrumentalities: Computer equipment configured with or utilizing software based on Linux kernel version 2.6.18
		features of the Accused Instrumentalities would perform substantially the same function, in substantially the same way, to achieve substantially the same result, as the recited limitation.
2.	The information storage and retrieval system according to claim 1 further including means for dynamically determining maximum number for the record search means to remove in the accessed linked list of records.	<p>When Google makes, uses, sells, offers to sell or imports (or actively induces or contributes to same) computer equipment configured with or utilizing software based on Linux kernel version 2.6.18, Google makes, uses, sells, offers to sell or imports (or actively induces or contributes to same) a system that is especially adapted to include means for dynamically determining maximum number for the record search means to remove in the accessed linked list of records or its equivalent.</p> <p>Specifically, code contained within function <code>rt_intern_hash</code>, in module <code>/net/ipv4/route.c</code>, dynamically executes based upon comparison with variable <code>ip_rt_gc_elasticity</code>. In this way, computer equipment configured with or utilizing software based on Linux kernel version 2.6.18 includes means for dynamically determining maximum number for the record search means to remove in the accessed linked list of records or its equivalent.</p> <p>The following code excerpt from the <code>rt_intern_hash</code> functions is an example of the variable <code>ip_rt_gc_elasticity</code> being used for dynamically determining maximum number for the record search means to remove in the accessed linked list of records or its equivalent:</p> <pre> if (cand) { /* ip_rt_gc_elasticity used to be average length of chain * length, when exceeded gc becomes really aggressive. * * The second limit is less certain. At the moment it allows * only 2 entries per bucket. We will see. */ if (chain_length > ip_rt_gc_elasticity) { </pre>

	Claim Language	Accused Instrumentalities: Computer equipment configured with or utilizing software based on Linux kernel version 2.6.18
		<pre> * candp = cand->u.rt_next; rt_free(cand); } } </pre> <p>Source: Linux kernel source code file /net/ipv4/route.c</p> <p>In the event this limitation is construed so as to be not literally present in the Accused Instrumentalities, Bedrock would alternatively contend that the Accused Instrumentalities meet the recited limitation under the doctrine of equivalents, because any purported differences between this limitation and the aforementioned features of the Accused Instrumentalities would be insubstantial. For example, the aforementioned features of the Accused Instrumentalities would perform substantially the same function, in substantially the same way, to achieve substantially the same result, as the recited limitation.</p>
3.	<p>A method for storing and retrieving information records using a linked list to store and provide access to the records, at least some of the records automatically expiring, the method comprising the steps of:</p>	<p>Bedrock does not express a position at this time as to whether the preamble of this claim limits the claim's scope. Nevertheless, Bedrock identifies below aspects of the Accused Instrumentalities that correspond to the claim preamble.</p> <p>When Google uses (or induces or contributes to others' use of) computer equipment configured with or utilizing software based on Linux kernel version 2.6.18, Google practices (or induces or contributes to others' practice of) a method for storing and retrieving information records that uses a linked list to store and provide access to the records, where at least some of the records are automatically expiring. Computer equipment configured with or utilizing software based on Linux kernel version 2.6.18 is especially adapted to store and retrieve information records using a linked list to store and provide access to the records, where at least some of the records are automatically expiring.</p> <p>In the event this preamble is construed so as to be not literally present in the Accused</p>

	Claim Language	Accused Instrumentalities: Computer equipment configured with or utilizing software based on Linux kernel version 2.6.18
		<p>Instrumentalities, Bedrock would alternatively contend that the Accused Instrumentalities meet the recited limitation under the doctrine of equivalents, because any purported differences between this preamble and the aforementioned features of the Accused Instrumentalities would be insubstantial. For example, the aforementioned features of the Accused Instrumentalities would perform substantially the same function, in substantially the same way, to achieve substantially the same result, as the recited limitation.</p>
(a)	<p>accessing the linked list of records,</p>	<p>When Google uses (or induces or contributes to others' use of) computer equipment configured with or utilizing software based on Linux kernel version 2.6.18, Google practices (or induces or contributes to others' practice of) a method that includes the step of accessing the linked list of records. Computer equipment configured with or utilizing software based on Linux kernel version 2.6.18 is especially adapted to access a linked list of records.</p> <p>Specifically, the data structure <code>rt_hash_table</code> in module <code>/net/ipv4/route.c</code> is used to access the linked list of records. Additionally, code contained within the function <code>rt_intern_hash</code> in module <code>/net/ipv4/route.c</code> is also used to access the linked list of records.</p> <p>The following code excerpt from the <code>rt_intern_hash</code> function is an example of accessing the linked list of records:</p> <pre> rthp = &rt_hash_table[hash].chain; spin_lock_bh(rt_hash_lock_addr(hash)); while ((rth = *rthp) != NULL) { </pre> <p>****</p>

	Claim Language	Accused Instrumentalities: Computer equipment configured with or utilizing software based on Linux kernel version 2.6.18
		<pre data-bbox="856 310 1251 451"> chain_length++; rthp = &rth->u.rt_next; } </pre> <p data-bbox="760 492 1457 521">Source: Linux kernel source code file /net/ipv4/route.c</p> <p data-bbox="760 565 1894 849">In the event this limitation is construed so as to be not literally present in the Accused Instrumentalities, Bedrock would alternatively contend that the Accused Instrumentalities meet the recited limitation under the doctrine of equivalents, because any purported differences between this limitation and the aforementioned features of the Accused Instrumentalities would be insubstantial. For example, the aforementioned features of the Accused Instrumentalities would perform substantially the same function, in substantially the same way, to achieve substantially the same result, as the recited limitation.</p>
(b)	identifying at least some of the automatically expired ones of the records, and	<p data-bbox="760 898 1894 1141">When Google uses (or induces or contributes to others' use of) computer equipment configured with or utilizing software based on Linux kernel version 2.6.18, Google practices (or induces or contributes to others' practice of) a method that includes the step of identifying at least some of the automatically expired ones of the records. Computer equipment configured with or utilizing software based on Linux kernel version 2.6.18 is especially adapted to identify at least some of the automatically expired ones of the records.</p> <p data-bbox="760 1190 1894 1287">Specifically, code contained within or accessed by the function <code>rt_intern_hash</code> in module /net/ipv4/route.c is used to practice a method that includes the step of identifying at least some of the automatically expired ones of the records.</p> <p data-bbox="760 1336 1894 1399">The following code excerpt from the <code>rt_intern_hash</code> function is an example of identifying at least some of the automatically expired ones of the records:</p>

	Claim Language	Accused Instrumentalities: Computer equipment configured with or utilizing software based on Linux kernel version 2.6.18
		<pre data-bbox="947 342 1478 667"> if (!atomic_read(&rth->u.dst.__refcnt)) { u32 score = rt_score(rth); if (score <= min_score) { cand = rth; candp = rthp; min_score = score; } } </pre> <p data-bbox="758 711 1457 743">Source: Linux kernel source code file /net/ipv4/route.c</p> <p data-bbox="758 784 1896 1068">In the event this limitation is construed so as to be not literally present in the Accused Instrumentalities, Bedrock would alternatively contend that the Accused Instrumentalities meet the recited limitation under the doctrine of equivalents, because any purported differences between this limitation and the aforementioned features of the Accused Instrumentalities would be insubstantial.
