

3. Frito-Lay is not required to answer to the allegations contained in Paragraph 3 of the Complaint because the allegations are not directed to Frito-Lay. Moreover, Frito-Lay lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 3 and, therefore, denies them.

4. Frito-Lay is not required to answer to the allegations contained in Paragraph 4 of the Complaint because the allegations are not directed to Frito-Lay. Moreover, Frito-Lay lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 4 and, therefore, denies them.

5. Frito-Lay is not required to answer to the allegations contained in Paragraph 5 of the Complaint because the allegations are not directed to Frito-Lay. Moreover, Frito-Lay lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 5 and, therefore, denies them.

6. Frito-Lay is not required to answer to the allegations contained in Paragraph 6 of the Complaint because the allegations are not directed to Frito-Lay. Moreover, Frito-Lay lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 6 and, therefore, denies them.

7. Frito-Lay admits to the allegations contained in Paragraph 7 of the Complaint.

8. Frito-Lay is not required to answer to the allegations contained in Paragraph 8 of the Complaint because the allegations are not directed to Frito-Lay. Moreover, Frito-Lay lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 8 and, therefore, denies them.

9. Frito-Lay is not required to answer to the allegations contained in Paragraph 9 of the Complaint because the allegations are not directed to Frito-Lay. Moreover, Frito-Lay lacks

sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 9 and, therefore, denies them.

10. Frito-Lay is not required to answer to the allegations contained in Paragraph 10 of the Complaint because the allegations are not directed to Frito-Lay. Moreover, Frito-Lay lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 10 and, therefore, denies them.

11. Frito-Lay is not required to answer to the allegations contained in Paragraph 11 of the Complaint because the allegations are not directed to Frito-Lay. Moreover, Frito-Lay lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 11 and, therefore, denies them.

12. Frito-Lay is not required to answer to the allegations contained in Paragraph 12 of the Complaint because the allegations are not directed to Frito-Lay. Moreover, Frito-Lay lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 12 and, therefore, denies them.

13. Frito-Lay is not required to answer to the allegations contained in Paragraph 13 of the Complaint because the allegations are not directed to Frito-Lay. Moreover, Frito-Lay lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 13 and, therefore, denies them.

II. JURISDICTION AND VENUE

14. Frito-Lay incorporates its responses contained in Paragraphs 1-13 as though fully set forth here.

15. Frito-Lay admits that the Complaint includes claims of patent infringement that arise under the patent laws of the United States, 35 U.S.C. § 101 *et seq.* Frito-Lay admits that this Court has subject matter jurisdiction over this action.

16. Frito-Lay admits that it is subject to this Court's personal jurisdiction. Except as expressly admitted herein, Frito-Lay lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 26 and, therefore, denies them.

17. Frito-Lay admits that venue is proper with respect to Frito-Lay. Except as expressly admitted herein, Frito-Lay lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 27 and, therefore, denies them.

III. PATENT INFRINGEMENT

18. Frito-Lay incorporates its responses contained in Paragraphs 1-17 as though fully set forth here.

19. From the face of the United States Patents Nos. 5,838,906 ("the '906 Patent) and 7,599,985 ("the '985 Patent"), the title and date of issuance appears to be as alleged in Paragraph 30 of the Complaint. Except as stated herein, Frito-Lay lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 29 and, therefore, denies them.

20. Frito-Lay lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 30 and, therefore, denies them.

21. Frito-Lay is not required to answer to the allegations contained in Paragraph 21 of the Complaint because the allegations are not directed to Frito-Lay. Moreover, Frito-Lay lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 21 and, therefore, denies them.

22. Frito-Lay is not required to answer to the allegations contained in Paragraph 22 of the Complaint because the allegations are not directed to Frito-Lay. Moreover, Frito-Lay lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 22 and, therefore, denies them.

23. Frito-Lay is not required to answer to the allegations contained in Paragraph 23 of the Complaint because the allegations are not directed to Frito-Lay. Moreover, Frito-Lay lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 23 and, therefore, denies them.

24. Frito-Lay is not required to answer to the allegations contained in Paragraph 24 of the Complaint because the allegations are not directed to Frito-Lay. Moreover, Frito-Lay lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 24 and, therefore, denies them.

25. Frito-Lay denies the allegations contained in Paragraph 25, including but not limited to the allegations that it has directly and/or indirectly infringed (by inducement and/or contributory infringement), or is continuing to infringe, directly and/or indirectly, the '906 Patent and/or the '985 Patent.

26. Frito-Lay is not required to answer to the allegations contained in Paragraph 26 of the Complaint because the allegations are not directed to Frito-Lay. Moreover, Frito-Lay lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 26 and, therefore, denies them.

27. Frito-Lay is not required to answer to the allegations contained in Paragraph 27 of the Complaint because the allegations are not directed to Frito-Lay. Moreover, Frito-Lay lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 27 and, therefore, denies them.

28. Frito-Lay is not required to answer to the allegations contained in Paragraph 28 of the Complaint because the allegations are not directed to Frito-Lay. Moreover, Frito-Lay lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 28 and, therefore, denies them

29. Frito-Lay is not required to answer to the allegations contained in Paragraph 29 of the Complaint because the allegations are not directed to Frito-Lay. Moreover, Frito-Lay lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 29 and, therefore, denies them.

30. Frito-Lay is not required to answer to the allegations contained in Paragraph 30 of the Complaint because the allegations are not directed to Frito-Lay. Moreover, Frito-Lay lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 30 and, therefore, denies them.

31. Frito-Lay is not required to answer to the allegations contained in Paragraph 31 of the Complaint because the allegations are not directed to Frito-Lay. Moreover, Frito-Lay lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 31 and, therefore, denies them.

32. Frito-Lay denies the allegations contained in Paragraph 32 of the Complaint to the extent that the allegations are directed to Frito-Lay. Moreover, Frito-Lay lacks sufficient knowledge or information to form a belief as to the truth of the allegation contained in Paragraph 32 directed at Defendants other than Frito-Lay, and therefore, denies them.

33. Frito-Lay denies the allegations contained in Paragraph 33 of the Complaint to the extent that the allegations are directed to Frito-Lay. Moreover, Frito-Lay lacks sufficient knowledge or information to form a belief as to the truth of the allegation contained in Paragraph 33 directed at Defendants other than Frito-Lay, and therefore, denies them.

34. Frito-Lay denies the allegations contained in Paragraph 34 of the Complaint to the extent that the allegations are directed to Frito-Lay. Moreover, Frito-Lay lacks sufficient knowledge or information to form a belief as to the truth of the allegation contained in Paragraph 34 directed at Defendants other than Frito-Lay, and therefore, denies them.

35. Frito-Lay denies the allegations contained in Paragraph 35 of the Complaint to the extent that the allegations are directed to Frito-Lay. Moreover, Frito-Lay lacks sufficient knowledge or information to form a belief as to the truth of the allegation contained in Paragraph 35 directed at Defendants other than Frito-Lay, and therefore, denies them.

IV. PLAINTIFF'S PRAYER FOR RELIEF

36. Frito-Lay denies that Plaintiff is entitled to any of its requests for relief against Frito-Lay.

V. JURY DEMAND

37. No response is required to Plaintiff's jury demand.

DEFENSES

38. Frito-Lay's Defenses are set forth below. Frito-Lay undertakes the burden of proof only as to those defenses as required by law regardless of how such defenses are denominated herein. Frito-Lay reserves the right to amend its Answer to add additional Defenses.

FIRST DEFENSE

39. Frito-Lay has not and does not directly or indirectly (by inducement, contributory infringement, or otherwise) infringe any of the claims of the '906 Patent or the '985 Patent either literally or under the Doctrine of Equivalents.

SECOND DEFENSE

40. The '906 Patent and the '985 Patent are invalid or void for failing to satisfy the conditions of patentability as set forth in 35 U.S.C §§100, 101, 102, 103 and/or 112.

THIRD DEFENSE

41. Plaintiff is estopped from construing any valid claim of the '906 Patent or the '985 Patent to be infringed literally or by the Doctrine of Equivalents by any act of Frito-Lay due to the disclosures of prior art or to the admissions or statements made to the U.S. Patent and Trademark Office during prosecution of the patents in suit or because of the disclosure or language of the specification or claims thereof.

FOURTH DEFENSE

42. Plaintiff is not entitled to recover any damages to the extent that Plaintiff, or any predecessors in interest to the '906 or the '985 Patent, or licensees thereof, failed to properly mark any of their relevant products as required by 35 U.S.C. §287 or otherwise give proper notice that Frito-Lay's actions actually infringed the '906 or the '985 Patent. Frito-Lay is not liable to Plaintiff for the acts alleged to have been performed before Frito-Lay received notice that it was allegedly infringing the '906 and/or the '985 Patent.

FIFTH DEFENSE

43. Frito-Lay incorporates its responses as set forth above as though fully set forth herein.

44. To the extent that Plaintiff asserts that Frito-Lay indirectly infringes, either by contributory infringement or inducement, Frito-Lay is not liable to Plaintiff for the acts alleged to have been performed before Frito-Lay knew that its actions would cause the indirect infringement.

SIXTH DEFENSE

45. Plaintiff's claims against Frito-Lay are improper to the extent that any allegedly infringing products are directly or indirectly provided to Frito-Lay or by Frito-Lay to an entity having an express or implied license to the '906 and/or the '985 Patent.

SEVENTH DEFENSE

46. On information and belief, Plaintiff's patent rights with respect to any allegedly infringing products are exhausted by virtue of an express or implied license to the '906 and/or the '985 Patent to one or more third parties.

EIGHTH DEFENSE

47. Plaintiff is not entitled to any injunctive relief as demanded because any injury to Plaintiff is neither immediate or irreparable, and Plaintiff has adequate remedies at law.

NINTH DEFENSE

48. The '985 Patent is invalid and/or unenforceable under the doctrine of prosecution laches.

TENTH DEFENSE

49. On information and belief, and subject to further amendments as Frito-Lay obtains more information during discovery, the '906 Patent and the '985 Patent are unenforceable as a result of inequitable conduct before the United States Patent and Trademark Office.

A. Overview

1. Doyle and Krueger had a duty of candor and good faith in dealing with the Patent Office

50. Michael D. Doyle (“Doyle”) is one of the named inventors of the patents-in-suit, U.S. Patent Nos. 5,828,906 and 7,599,985.

51. Charles E. Krueger (“Krueger”) was the patent prosecutor for the patents-in-suit, U.S. Patent Nos. 5,828,906 and 7,599,985.

52. Doyle, as a named inventor, and Krueger, as the patent prosecutor, each had a duty of candor and good faith in dealing with the United States Patent and Trademark Office (“the Patent Office”) during prosecution of the ’906 and ’985 patents.

53. Doyle and Krueger’s duty of candor and good faith also existed during the reexaminations of the ’906 patent.

54. The duty of candor and good faith owed by Doyle and Krueger included a duty to disclose to the Patent Office all information known to that individual to be material to patentability as defined in 27 C.F.R. § 1.56.

2 Doyle had a financial incentive to deceive the Patent Office

55. Doyle had a financial incentive to deceive the Patent Office during prosecution of the ’906 patent, during the reexaminations of the ’906 patent, and during the prosecution of the ’985 patent.

56. Doyle worked at the University of California, San Francisco when he allegedly conceived of the inventions claimed in the ’906 and ’985 patents.

57. The ’906 and ’985 patents are owned by The Regents of the University of California.

58. Doyle and his co-inventors are entitled to receive a portion of any royalties paid to The Regents of the University of California related to the ’906 and/or ’985 patents.

59. Doyle is a founder of Eolas Technologies Incorporated (“Eolas”).

60. Doyle quit his job to found Eolas, and personally invested time and money in Eolas.

61. Doyle has had a financial interest in Eolas since at least August 21, 1995.

62. On or about August 21, 1995, Eolas acquired rights to the patent application that matured into the '906 patent.

63. Doyle was personally involved in the prosecution of the '906, the reexaminations of the '906 patent, and the prosecution of the '985 patent at the same time that he had a financial interest in Eolas and a financial interest in any royalties on the '906 and/or '985 patents paid to The Regents of the University of California.

3. Doyle and Krueger breached his duty of candor and good faith with an intent to deceive the Patent Office

64. As explained in more detail below, Doyle and Krueger breached the duty of candor and good faith in dealing with the Patent Office. Doyle and Krueger failed to disclose material information and made affirmative misrepresentations of material facts. Doyle and Krueger did so with knowledge of the information withheld, with knowledge of the falsity of the misrepresentations, and with the specific intent to deceive the Patent Office. The circumstances of Doyle and Krueger's actions confirm an intent to deceive the Patent Office.

B. Doyle and Krueger failed to disclose material information related to the ViolaWWW browser

65. As explained in more detail below, Doyle and Krueger breached the duty of candor and good faith in dealing with the Patent Office by failing to disclose material information related to the ViolaWWW browser. Doyle and Krueger did so with knowledge of the information withheld and with the specific intent to deceive the Patent Office. The circumstances of Doyle and Krueger's actions confirm an intent to deceive the Patent Office.

66. As explained in more detail below, the ViolaWWW browser was material to the patentability of all the claims of the '906 patent because it disclosed limitations that the Patent Office believed were missing in the prior art, including interactivity *embedded within* the webpage (as opposed to a separate window), *automatic* invocation of the interactivity (as opposed to requiring a

mouse click to enable the interactivity), and use of a separate executable application (as opposed to a script). Doyle and Krueger knew that the ViolaWWW browser disclosed these limitations, yet they withheld this information from the Patent Office at the same time that they argued to the Patent Office that these limitations were missing from the prior art.

1. Doyle and Krueger knew about the ViolaWWW browser before the application for his '906 patent was filed on October 17, 1994

67. The application for the '906 patent was filed on October 17, 1994.

68. Thus the critical date for purposes of 35 U.S.C. § 102(b) was October 17, 1993. Any printed publication describing the claimed invention, or any public use of the claimed invention in the United States, before October 17, 1993, would be an absolute bar to patentability.

69. Doyle knew before the application for the '906 patent was filed that an individual in Northern California named Pei Wei had developed a browser called "ViolaWWW" before the critical date of October 17, 1993.

70. On May 20, 1994, David Raggett sent an e-mail to Doyle regarding object level embedding in web browsers. In this email, Raggett advised Doyle that he "might want to look at Viola which [Raggett] seem[s] to remember takes advantage of the tk tool kit to provide a certain level of embedding."

71. Raggett further advised Doyle that he could "find a pointer to Viola off the CERN WWW project page."

72. Later on the same day, May 20, 1994, David Martin, who was one of Doyle's colleagues at the University of California in San Francisco and who was also named as an inventor on the '906 patent, responded to a posting from Pei Wei on a publicly-accessible e-mail distribution list. Pei Wei's post had included the following statements: "In order to do better testings [sic] and support of ViolaWWW, I would like to solicit donations for guest accounts on the major Unix platforms. . . . So, if your organization has some CPU crunchies to spare, good network connectivity, don't have a firewall, want to help viola development, etc, please drop me a note. Based mostly on network connectivity, I'll

select one (maybe two) offer(s) for each different platform.” David Martin’s response to Pei Wei included the following statements: “I am willing to discuss providing accounts on SGI IRIX 5.x, Solaris 2.x, Alpha OSF/1. Please let me know what you require in terms of disk space, compiler, utilities, etc...”

73. Thus by May 20, 1994 — several months before the application for the ’906 patent was filed — Doyle knew about Pei Wei’s ViolaWWW browser.

74. Doyle did not disclose this information to Krueger or Charles J. Kulas (“Kulas”), the patent prosecutor that filed the ’906 patent application, prior to the filing of the application that lead to the ’906 patent.

75. Doyle learned even more about the ViolaWWW browser before the application for the ’906 patent was filed.

76. On August 20, 1994, at approximately 11:15 p.m. California time, Doyle posted a “Press Release” to the publicly-accessible VRML e-mail distribution list that included the following statements:

Researchers at the U. of California have created software for embedding interactive program objects within hypermedia documents. Previously, object linking and embedding (OLE) has been employed on single machines or local area networks using MS Windows -TM-. This UC software is the first instance where program objects have been embedded in documents over an open and distributed hypermedia environment such as the World Wide Web on the Internet.

77. On August 21, 1994, at approximately 6:52 p.m. California time, Pei Wei posted a response on the publicly-accessible VRML e-mail distribution list that included the following statements: “I don’t think this is the first case of program objects embedded in docs and transported over the WWW. ViolaWWW has had this capabilities for months and months now.”

78. Pei Wei’s response included a link to an FTP site where anyone “interested in learning more about how violaWWW does this embedded objects thing can get a paper on it.”

79. The paper cited by Pei Wei was entitled “A Brief Overview of the VIOLA Engine, and its Applications.”

80. The paper cited by Pei Wei was dated August 16, 1994 — over two months before the application for the '906 patent was filed.

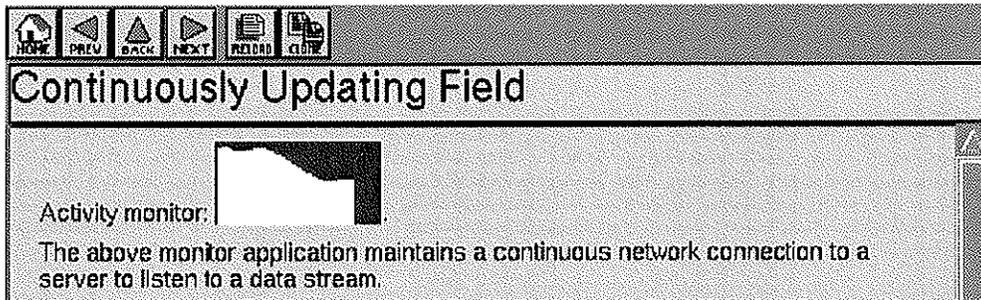

81. The paper cited by Pei Wei included the following statements and graphics:

Embedding mini applications

Viola's language and toolkit allows ViolaWWW to render documents with embedded viola objects. Although the viola language is not part of the World Wide Web standard (yet?), having this capability provides a powerful extension mechanism to the basic HTML.

For example, if the HTML's input-forms do not do exactly what you want, you have the option to build a mini customized input- form application. And it could have special scripts to check for the validity of the entered data before even making a connection to the server.

Or, if your document needs to show data that is continuously updated, you could build a small application such as this which display the CPU load of a machine. Note that only the graph field is continuously updated, but not the rest of the document.

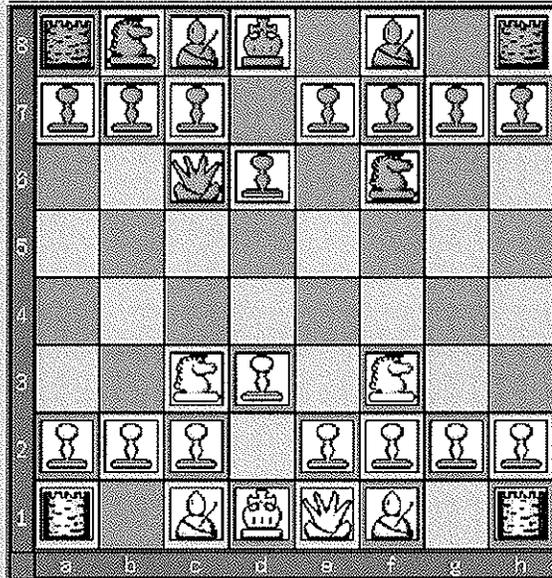

Other possible applications include front-ends to the stock market quotes, new wire updates, tele-video style service, etc.

Here's another example of a mini interactive application that is embedded into a HTML document. It's a chess board in which the chess pieces are actually active and movable. And, illegal moves can be checked and denied straight off by the intelligence of the scripts in the application. Given more work, this chess board application can front-end a chess server, connected to it using the socket facility in viola.

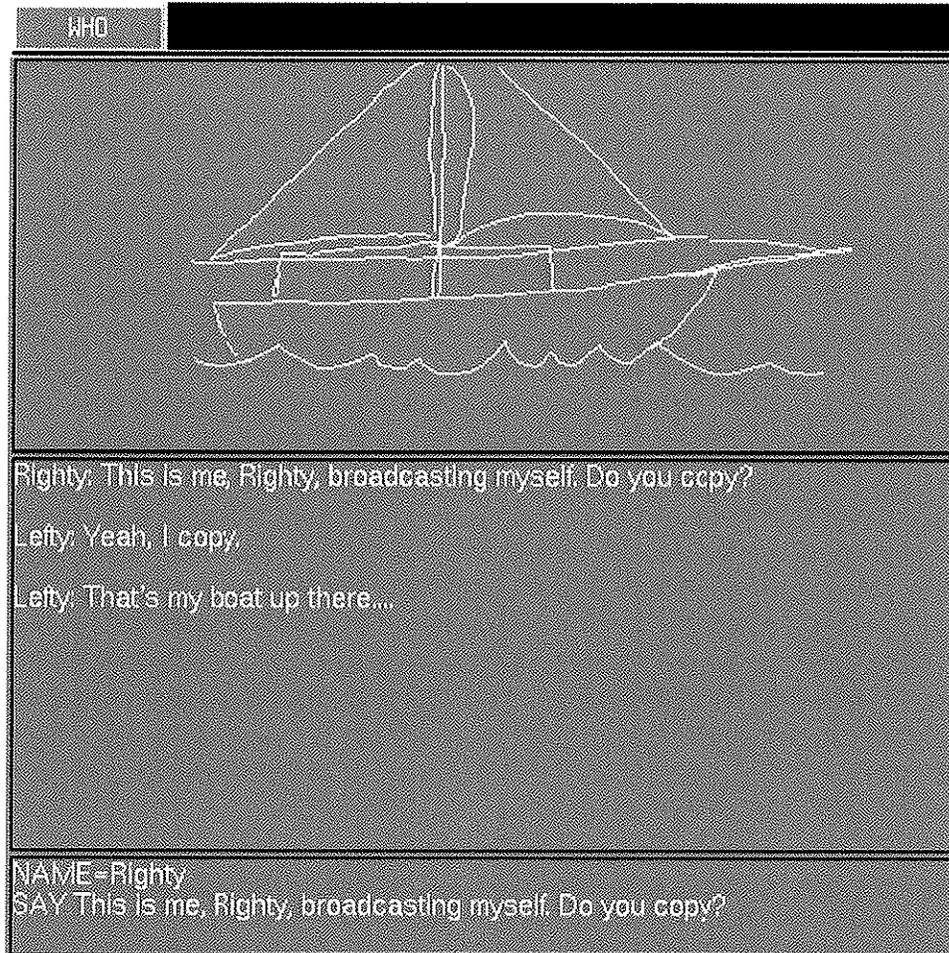

A Chess Board

This is a demo a viola "application" (the chess board) being retrieved via HTTP, instantiated, and plugged into this HTML document.

What follows is a screendump of a demo of an embedded viola application that lets readers of this HTML page communicate by typing or drawing. Like the chess board application above, this chat application can stand-alone (and have nothing to do with the World Wide Web), or be embedded into a HTML document.

By the way, to make this possible, a multi-threaded/persistent server was written to act as a message relay (and to handle HTTP as well).

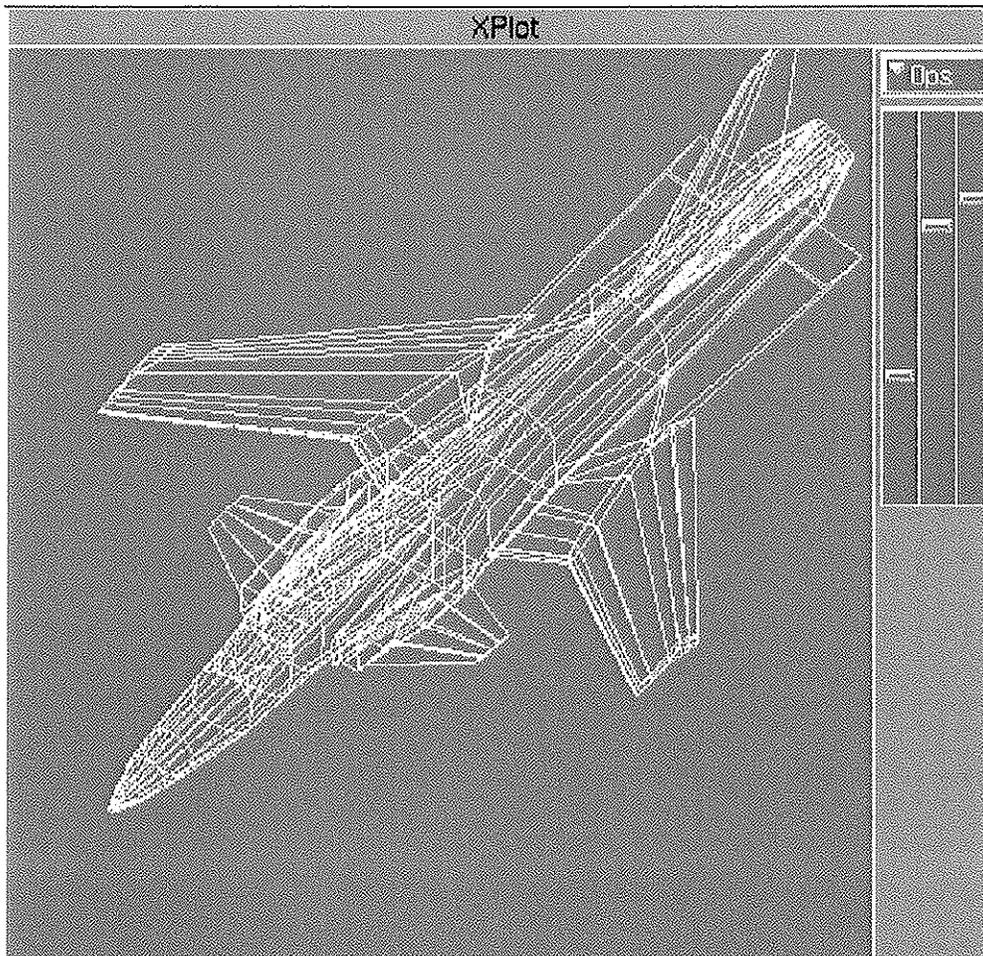

This next mini application front-ends a graphing process (on the same machine as the viola process). An important thing to note is that, like all the other document-embeddable mini applications shown, no special modification to the viola engine is required for ViolaWWW to support them. All the bindings are done via the viola language, provided that the necessary primitives are available in the interpreter [sic], of course.

Put it another way, because of the scripting capability, the ViolaWWW browser has become very flexible, and can take on many new features dynamically. C-code patches and recompilation of the browser can frequently be avoided.

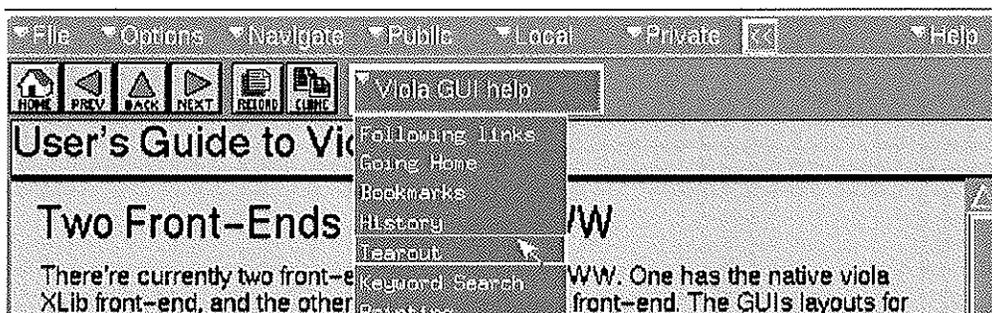

This attribute can be very important for several reasons. It keeps the size of the core software small, yet can grow dynamically as less frequently used features are occasionally [sic] used, or as new accessories/components are added.

accompany documents, or conceivably as complicated as a news or mail reader. An analogy is how Emacs's programming environment allows that text editor to become much more than just a text editor.

Not only can mini applications be embedded inside of documents, they can even be plugged into the ViolaWWW's "toolbar".

The following picture shows a "bookmark tool" that acts as a mini table of contents for the page. In this case, the bookmark is linked to the document (by using the <LINK> tag of HTML 3.0), and the bookmark will appear and disappear with the document.

One can imagine many plug-in accessories/applets/tools possible with this facility. Like, a self guiding slide show tool. Or, document set specific navigational tools/icons that are not pasted onto the page so that the navigational icons don't

scroll away from view. Etc.

82. “Doyle downloaded and read the paper.” 299 F.3d 1225, 1230 (Fed. Cir. 2005).

83. On August 21, 1994, at approximately 9:06 p.m. California time, Doyle responded to Pei Wei’s statement at approximately 6:52 p.m. that “I don’t think this is the first case of program objects embedded in docs and transported over the WWW. ViolaWWW has had this capabilities for months and months now.” Doyle responded by asking Pei Wei, “How many months and months? We demonstrated our technology in 1993.”

84. On August 21, 1994, at approximately 11:16 p.m. California time, Pei Wei responded to the message that Doyle had sent at approximately 9:06 p.m. Pei Wei’s response included the following statements:

Definitely by May 8, 1993 we had demonstrated that plotting demo (the very one shown in the viola paper) to visitors from a certain computer manufacturer... This demo was memorable because someone and I at ORA had lost sleep the night before the meeting, in order to cook up that particular plotting demo :) We had to show something cool.

That demo wasn't very hard to do because by that time the basic capability was already in place for violaWWW to fetch viola objects over HTTP (or whatever) and plug them into documents. Of course, our wire-frame plotting demo isn't anywhere as comprehensive as yours. But, the point was that there was a way to embed programmable & interactive objects into HTML documents.

85. When Pei Wei referred to the “plotting demo (the very one shown in the viola paper),” he was referring to the plot of the fighter jet shown above in the window titled “XPlot.”

86. When Pei Wei referred to a demonstration “by May 8, 1993” to “visitors from a certain computer manufacturer,” he was referring to a demonstration of the plotting demo to Karl Jacob and James Kempf from Sun Microsystems on May 7, 1993. This demonstration took place in Northern California. There was no limitation, restriction or obligation of secrecy on Karl Jacob or James Kempf.

87. The Federal Circuit has held that “Wei’s May 7, 1993 demonstration to two Sun Microsystems employees without confidentiality agreements was a public use under [35 U.S.C. § 102(b)].”

299 F.3d 1225, 1235 (Fed. Cir. 2005).

88. On August 21, 1994, at approximately 11:13 p.m. California time, Doyle responded again to the message that Pei Wei had sent at approximately 6:52 p.m.

89. Doyle's response was sent after Doyle had read Pei Wei's paper about the ViolaWWW browser dated August 16, 1994.

90. Doyle's response included the following statements: "Pei is mistaken on two counts, as I describe below As Pei's paper on Viola states, that package did not support what it calls 'embeddable program objects' until 1994. . . . Furthermore, Viola merely implements an internal scripting language"

91. On August 21, 1994, at approximately 11:26 p.m. California time, Doyle responded to the message that Pei Wei had sent at approximately 11:16 p.m. Doyle's response included the following statements: "Out of curiosity, did you publicly demonstrate this or publish any results before 1994?"

92. On September 1, 1994, at approximately 12:08 a.m. California time, Pei Wei responded to the message that Doyle had sent at approximately 11:13 p.m.

93. Pei Wei's message at approximately 12:08 a.m. was also responsive to the message that Doyle had sent at approximately 11:26 p.m.

94. Pei Wei's message to Doyle at 12:08 a.m. included the following statements:

Well. Viola's model was *demonstrated* in 1993, *released* freely in 1994. . . . And, as for the plotting demo, it actually is really just a front-end that fires up a back-end plotting program (and the point is that that back-end could very well be running on a remote super computer instead of the localhost). For that demo, there is a simple protocol such that the front-end app could pass an X window ID to the back-end, and the back-end draws the graphics directly onto the window violaWWW has opened for it.

95. Doyle deleted from his computer his emails with Pei Wei on August 21 and September 1, 1994, and the copy of the Viola paper dated August 16, 1994, that he had downloaded and read.

Doyle kept on his computer other emails from that timeframe, however.

96. Doyle was living in Northern California on August 21, 1994, when he exchanged messages with Pei Wei about the ViolaWWW browser.

97. Pei Wei was living in Northern California on August 21, 1994, when he exchanged messages with Doyle about the ViolaWWW browser.

98. There was no limitation, restriction or obligation of secrecy on the recipients of Pei Wei's messages on August 21 and September 1, 1994, about the ViolaWWW browser.

99. There was no limitation, restriction or obligation of secrecy on the readers of Pei Wei's paper about the ViolaWWW browser dated August 16, 1994.

100. On October 17, 1994, the application for the '906 patent was filed. Doyle and Martin were among those named as inventors.

101. The application for the '906 patent discloses the Mosaic browser and the Cello browser, but not the ViolaWWW browser.

102. The application for the '906 patent included an information disclosure statement that identified several pieces of prior art, but not the ViolaWWW browser.

103. On November 22, 1994, Doyle signed a declaration under penalty of perjury that included the following statements: "I believe I am . . . an original, first and joint inventor . . . of the subject matter which is claimed and for which a patent is sought . . . the specification of which . . . was filed on October 17, 1994 as Application Serial No. 08/224,443. . . . I acknowledge the duty to disclose information which is material to the examination of this application in accordance with Title 27, Code of Federal Regulations, Section 1.56."

104. No disclosure about the ViolaWWW browser was ever provided to the Patent Office during prosecution of application number 08/224,443, which matured into the '906 patent.

2. Doyle was reminded about the ViolaWWW browser in 1995 during prosecution of the '906 patent

105. Doyle was reminded about Pei Wei and the ViolaWWW browser in 1995, during prosecution of the '906 patent, but still no disclosure about the ViolaWWW browser was provided to the Patent Office.

106. On August 21, 1995, at approximately 11:42 a.m. California time, Doyle posted a "Press Release" to the publicly-accessible WWW-talk e-mail distribution list. Doyle's post included the following statements: "Eolas Technologies Inc. announced today that it has completed a licensing agreement with the University of California for the exclusive rights to a pending patent covering the use of embedded program objects, or 'applets,' within World Wide Web documents."

107. On August 21, 1995, at approximately 12:54 p.m. California time, Pei Wei responded on the publicly-accessible WWW-talk e-mail distribution list to Doyle's "Press Release." Pei Wei's response included the following statements: "[F]or the record, I just want to point out that the 'technology which enabled Web documents to contain fully-interactive "inline" program objects' was existing in ViolaWWW and was *released* to the public, and in full source code form, even back in 1993... Actual conceptualization and existence occurred before '93."

108. On August 21, 1995, at approximately 1:14 p.m. California time, Doyle responded to the message Pei Wei had sent at approximately 12:54 p.m. Doyle's response included the following statements: "We've had this discussion before (last September, remember?). You admitted then that you did NOT release or publish anything like this before the Eolas demonstrations."

109. On August 21, 1995, at approximately 4:09 p.m. California time, Pei Wei responded to the message that Doyle had sent at approximately 1:14 p.m. Pei Wei's response included the following statements:

Please carefully re-read my letter to you... I said Viola was demonstrated in smaller settings, but before your demo. The applets stuff was demo'ed to whomever wanted to see it and had visited our office at O'Reilly & Associates (where I worked at the time).

This is what I wrote on the VRML list:

....

- > Definitely by May 8, 1993 we had demonstrated that plotting demo
- > (the very one shown in the viola paper) to visitors from a certain
- > computer manufacturer... This demo was memorable because someone and I
- > at ORA had lost sleep the night before the meeting, in order to cook up
- > that particular plotting demo :) We had to show something cool.

That date (May 93), at least, predates your demo if I'm not mistaken. Then around August 93, it was shown to a bunch of attendees at the first Web Conference in Cambridge. . . .

....

If you're talking about interactive apps *specifically* on the web, ie applets in-lined into HTML documents etc., and with bidirectional communications, then look at ViolaWWW as it existed around late '92 early '93.

110. When Pei Wei referred to the "plotting demo (the very one shown in the viola paper)," he was referring to the plot of the fighter jet shown above in the window titled "XPlot."

111. When Pei Wei referred to a demonstration "by May 8, 1993," he was referring to the demonstration of the plotting demo to two Sun Microsystems employees that the Federal Circuit has held "was a public use under [35 U.S.C. § 102(b)]." 299 F.3d 1225, 1235 (Fed. Cir. 2005).

112. When Pei Wei referred to the "first Web Conference in Cambridge" "around August 1993," he was referring to the "World-Wide Web Wizards Workshop" held in Cambridge, Massachusetts on July 28-20, 1993.

113. People attending the Wizards workshop included Tim Berners-Lee, Marc Andreessen, Eric Bina, Dale Dougherty, Scott Silvey, and Pei Wei.

114. Tim Berners-Lee and Dale Dougherty were the organizers of the Wizards workshop.

115. Dale Dougherty worked at O'Reilly & Associates in Northern California.

116. In 1992, Dale Dougherty learned about Viola and recruited Pei Wei to join O'Reilly & Associates. Pei Wei's job at O'Reilly & Associates was to continue developing the ViolaWWW browser.

117. Scott Silvey worked with Pei Wei at O'Reilly & Associates in Northern California.

118. When Pei Wei wrote "This demo was memorable because someone and I at ORA had lost

sleep the night before the meeting, in order to cook up that particular plotting demo,” the other person he was referring to was Scott Silvey.

119. Tim Berners-Lee is the person generally attributed to be the inventor of the World Wide Web.

120. Marc Andreessen and Eric Bina were the authors of Mosaic, a popular browser for the World Wide Web created at the National Center for Supercomputing Applications (NCSA) at the University of Illinois at Urbana-Champaign.

121. Marc Andreessen and Eric Bina went on to found Netscape, the manufacturer of another popular browser for the World Wide Web.

122. Pei Wei and Scott Silvey demonstrated the ViolaWWW browser and its ability to automatically invoke interactive objects embedded within a webpage using the “VOBJF” tag to at least Marc Andreessen and Tim Berners-Lee at the Wizards workshop in Cambridge, Massachusetts in July 1993 — over one year before the application for the ’906 patent was filed.

123. There was no limitation, restriction or obligation of secrecy on anyone at the Wizards workshop.

124. Pei Wei’s demonstration at the Wizards workshop of the ViolaWWW browser and its ability to automatically invoke interactive objects embedded within a webpage using the “VOBJF” tag was a public use under 35 U.S.C. § 102(b).

125. Despite Pei Wei’s communications to Doyle repeatedly providing evidence that the ViolaWWW browser was material prior art under 35 U.S.C. § 102(b), Doyle never disclosed the ViolaWWW browser to the Patent Office during prosecution of application number 08/224,443, which matured into the ’906 patent.

126. Instead, Doyle deleted from his computer his emails with Pei Wei on August 21, 1995. Doyle kept on his computer other emails from that timeframe, however.

3. In 1998, during prosecution of the '906 patent, Doyle collected additional information about the ViolaWWW browser

127. In 1998, during prosecution of the '906 patent, Doyle collected additional information about the ViolaWWW browser, but he still did not disclose any information about the ViolaWWW browser to the Patent Office, as explained in more detail below.

128. During prosecution of the '906 patent, Doyle maintained a folder called "Viola stuff."

129. The "Viola stuff" folder included a printout of Pei Wei's message to Doyle on August 21, 1994, at approximately 6:52 p.m. California time, in which Pei Wei told Doyle, "I don't think this is the first case of program objects embedded in docs and transported over the WWW. ViolaWWW has had this capabilities for months and months now."

130. The "Viola stuff" folder included a printout of Doyle's message to Pei Wei on August 21, 1994, at approximately 11:26 p.m. California time, in which Doyle asked Pei Wei, "Out of curiosity, did you publicly demonstrate this or publish any results before 1994?"

131. The "Viola stuff" folder included a printout from the URL <http://www.w3.org/History/1994/WWW/WorkingNotes/>. This webpage has a heading for the "WWWizardsWorkshop" "Cambridge, Mass, July 1993" and includes links to "Announcement," "Agenda," and "Photos of attendees."

132. "WWWizardsWorkshop" refers to the World-Wide Web Wizards Workshop held in Cambridge, Massachusetts on July 28-20, 1993, that Pei Wei attended.

133. The "Announcement" link links to a webpage at http://www.w3.org/History/1994/WWW/WorkingNotes/1993_Workshop/Announcement.html that states that "Interactive objects" would be discussed at the Wizards workshop.

134. The "Agenda" link links to a webpage at http://www.w3.org/History/1994/WWW/WorkingNotes/1993_Workshop/Agenda.html that states that "Interactive objects" was on the agenda for discussion at the Wizards workshop.

135. The webpages for the Wizards workshop corroborate Pei Wei's statement to Doyle on August 21, 1995, that the plotting demo described in the Viola paper dated August 16, 1994, was "shown to a bunch of attendees at the first Web Conference in Cambridge" "around August 93" — over one year before the application for the '906 patent was filed.

136. The "Viola stuff" folder included a printout of a webpage with a link to the source code for viola-2.1.2, archived on September 2, 1993 — over one year before the application for the '906 patent was filed.

137. The "Viola stuff" folder included a printout of a webpage with the "README" file for viola-2.1.2. The date at the top of the "README" file is July 27, 1992. The "README" file includes instructions for building the binary code for the "viola" program, and instructions for running the ViolaWWW browser. The "README" file states at the bottom:

Comments and questions:

Please send WWW specific bugs to www-bugs@info.cern.ch,
general comments to www-talk@info.cern.ch, and anything to
wei@xcf.Berkeley.EDU.

Pei Y. Wei
wei@xcf.berkeley.edu

138. The "Viola stuff" folder included a printout of a message that Pei Wei had sent to the publicly-accessible WWW-talk e-mail distribution list on January 28, 1994, that included the following statements: "Right now, the ViolaWWW that is under development can embed viola objects/applications inside of HTML documents."

139. The "Viola stuff" folder included a printout of a message that Pei Wei had sent to the publicly-accessible WWW-talk e-mail distribution list on February 25, 1994, that included the following statements:

The new ViolaWWW is now available for ftp'ing. It's beta and feedback is
very welcomed. The README file follows...

ViolaWWW, Version 3.0 Beta

Feb 23 1994

ViolaWWW is an extensible World Wide Web hypermedia browser for XWindows.

....

Notable features in the new ViolaWWW

....

* Embeddable in-document and in-toolbar programmable viola objects. A document can embed mini viola applications (ie: a chess board), or can cause mini apps to be placed in the toolbar.

....

Availability

Source and binary can be found in <ftp://ora.com/pub/www/viola>. Sparc binary is supplied.

....

Pei Y. Wei (wei@ora.com)
O'Reilly & Associates, Inc.

140. The "Viola stuff" folder included a printout from the URL <http://xcf.berkeley.edu/ht/projects/viola/>. The printout included the following statements:

ViolaWWW, Version 3.1 Beta

Mar 23 1994

ViolaWWW is an extensible World Wide Web hypermedia browser for XWindows.

....

Notable features in the new ViolaWWW

....

* Embeddable in-document and in-toolbar programmable viola objects. A document can embed mini viola applications (ie: a chess board), or can cause mini apps to be placed in the toolbar.

....

Availability

Source and binary can be found in <ftp://ora.com/pub/www/viola>. Sparc binary is supplied.

....

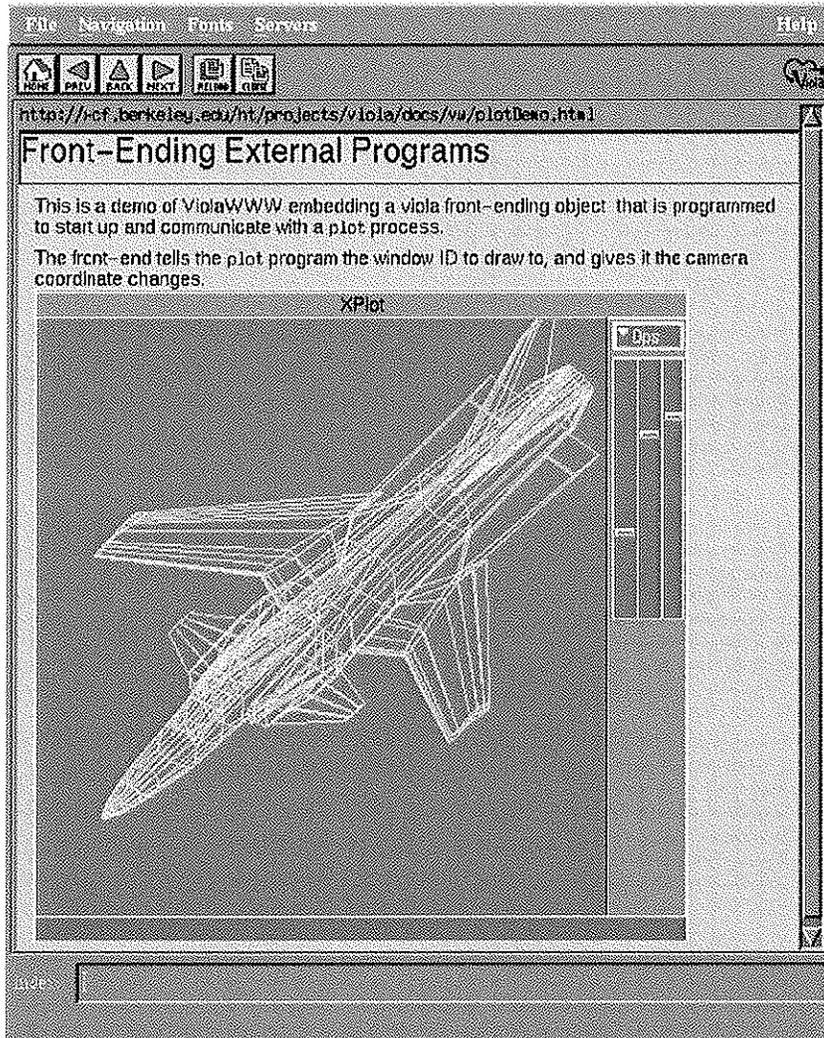

Pei Y. Wei (wei@ora.com)
O'Reilly & Associates, Inc.

141. The "Viola stuff" folder included a printout from the URL <http://xcf.berkeley.edu/ht/projects/viola/docs/viola/>. One of the files listed in the printout is named

“plotDemo.html”.

142. The “Viola stuff” folder included a printout from the URL <http://xcf.berkeley.edu/ht/projects/viola/docs/objs/>. One of the files listed in the printout is named “plot.v”.

143. The following is a screenshot of the ViolaWWW browser after parsing the file plotDemo.html:

144. The files plotDemo.html and plot.v include code for the plotting demo described in the Viola paper dated August 16, 1994.

145. The file plotDemo.html specifies the location of the file plot.v, which in turn specifies the location of a separate executable application named vplot.

146. Pei Wei had told Doyle on August 21, 1994 how the plotting demo worked: “[A]s for the plotting demo, it actually is really just a front-end that fires up a back-end plotting program (and the point is that that back-end could very well be running on a remote super computer instead of the localhost). For that demo, there is a simple protocol such that the front- end app could pass an X window ID to the back-end, and the back-end draws the graphics directly onto the window violaWWW has opened for it.”

147. Pei Wei had told Doyle on August 21, 1994, and again on August 21, 1995 that the plotting demo described in the Viola paper dated August 16, 1994, was the “very one” demonstrated “to visitors from a certain computer manufacturer” by May 8, 1993.

148. When Pei Wei referred to a demonstration “by May 8, 1993,” he was referring to the demonstration of the plotting demo to two Sun Microsystems employees that the Federal Circuit has held “was a public use under [35 U.S.C. § 102(b)].” 299 F.3d 1225, 1235 (Fed. Cir. 2005).

149. Thus, during prosecution of the ’906 patent, Doyle knew about Pei Wei’s demonstration of the plotting demo that the Federal Circuit has held was a “public use” under 35 U.S.C. § 102(b); Doyle knew how the plotting demo worked; and Doyle had access to the code for that plotting demo.

150. During prosecution of the ’906 patent, Doyle printed webpages containing information about a talk that Pei Wei gave at Stanford University in Northern California in September 1994.

151. The webpages that Doyle printed included the following statements and graphic:

WWW Browsers: Extensibility Issues

Pei Wei, O’Reilly & Associates

**Stanford Computer Forum WWW Workshop - September 20- 21,
1994**

....

Extensibility in WWW Browsers

The WorldWideWeb is a powerful medium which has many

applications beyond just publishing static documents. It is certainly an interface to the space of “documents.” But already, with established features such as input-forms and server-side scripting, we see that the web is also increasingly becoming an interface to the space of what is traditionally called “applications.”

....

In this talk I’ll describe a few possible approaches for a browser to gain more flexibility, and to briefly describe one particular approach as implemented by a system known as ViolaWWW.

....

Possible Ways to Extend Browsers

We already do “extend” browsers with things like “external viewers.” But there’s not a very good integration with the browser. Ideally those external viewers should be rendering in- place inside the document, and be working together with the browser, be tightly integrated with the browser and other parts...

....

Work at O’Reilly & Associates: VIOLA-WWW

....

This is the Viola system that is being developed at O’Reilly and Associates. This system has the following interesting characteristics:

....

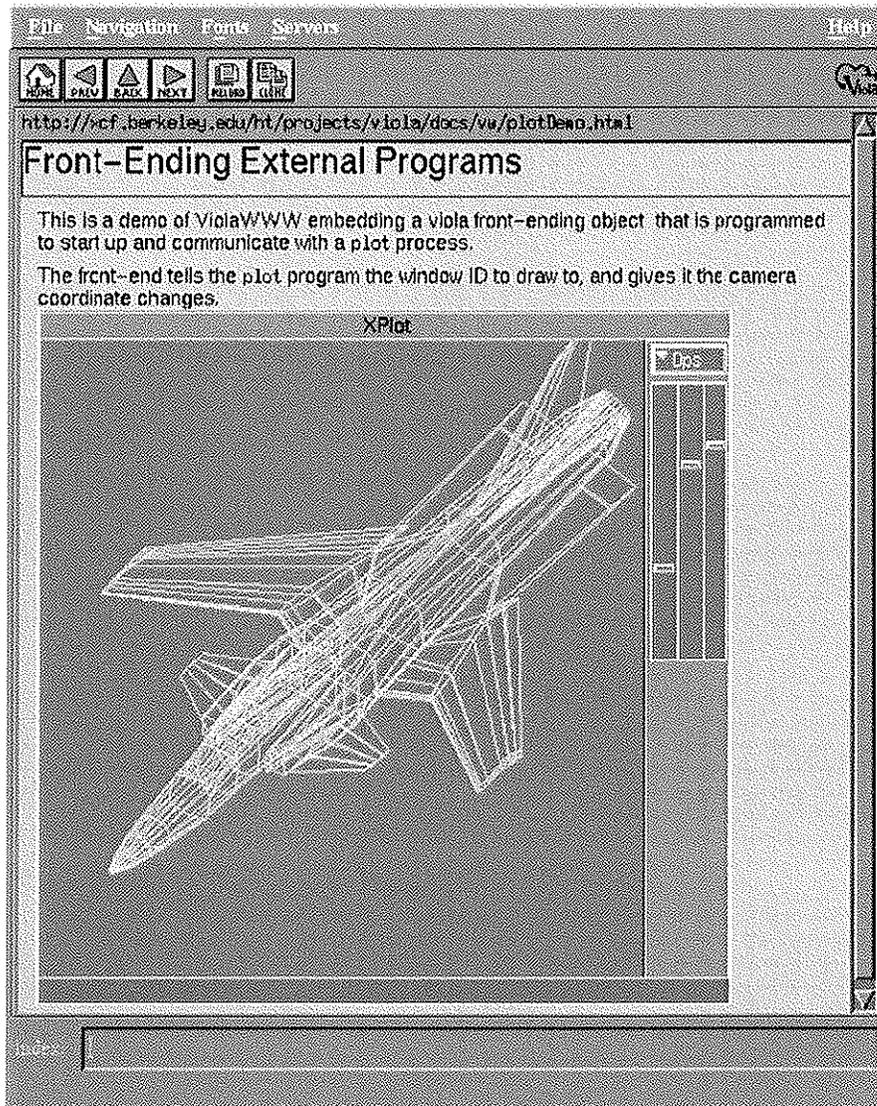

Three, program objects can be embedded into documents and the toolbar. . .

.

....

The next example is a front-end application to a backend. And the back-end is what actually does the computation and the drawing.

....

152. There was no limitation, restriction or obligation of secrecy on anyone attending the talk that Pei Wei gave at Stanford University in September 1994.

153. The plotting demo described in the talk at Stanford University in September 1994 is the same plotting demo described in the Viola paper dated August 16, 1994.

154. Pei Wei had told Doyle on August 21, 1994, and again on August 21, 1995, that the plotting demo described in the Viola paper dated August 16, 1994, was the “very one” demonstrated “to visitors from a certain computer manufacturer” by May 8, 1993.

155. When Pei Wei referred to a demonstration “by May 8, 1993,” he was referring to the demonstration of the plotting demo to two Sun Microsystems employees that the Federal Circuit has

held “was a public use under [35 U.S.C. § 102(b)].” 299 F.3d 1225, 1235 (Fed. Cir. 2005).

156. Thus, during prosecution of the '906 patent, Doyle was repeatedly confronted with evidence that the ViolaWWW browser was material prior art under 35 U.S.C. § 102(b), yet Doyle never disclosed the ViolaWWW browser to the Patent Office during prosecution of application number 08/224,443, which matured into the '906 patent.

157. The ViolaWWW browser, including the August 1994 Viola paper, was disclosed to Krueger in August of 1998, after the Notice of Allowance for the '906 patent issued but before the '906 patent issued, when he received a fax containing a number of references regarding the ViolaWWW browser.

158. The fax sent to Krueger in August of 1998 was to allow him to analyze whether the ViolaWWW browser, including the August 1994 Viola paper, should be submitted to the Patent Office.

159. Krueger was aware of Pei Wei's May 1993 demonstration of the ViolaWWW browser to Sun Microsystems employees without a confidentiality agreements.

160. Krueger considered Pei Wei's statements regarding the May 1993 demonstration of the ViolaWWW browser to Sun Microsystems employees when he analyzed whether to disclose the ViolaWWW browser to the Patent Office.

161. Krueger had no reason to disbelieve Pei Wei's statements regarding the May 1993 demonstration of the ViolaWWW browser to Sun Microsystems employees.

162. Krueger made the determination, prior to the issuance of the '906 patent, to not disclose to the PTO the information he received regarding the ViolaWWW browser.

4. The ViolaWWW browser was material to the patentability of the '906 patent

163. The ViolaWWW browser was material to the patentability of the claimed inventions in the '906 patent.

164. There is a remarkable similarity between the ViolaWWW browser and the preferred

embodiment of the '906 patent:

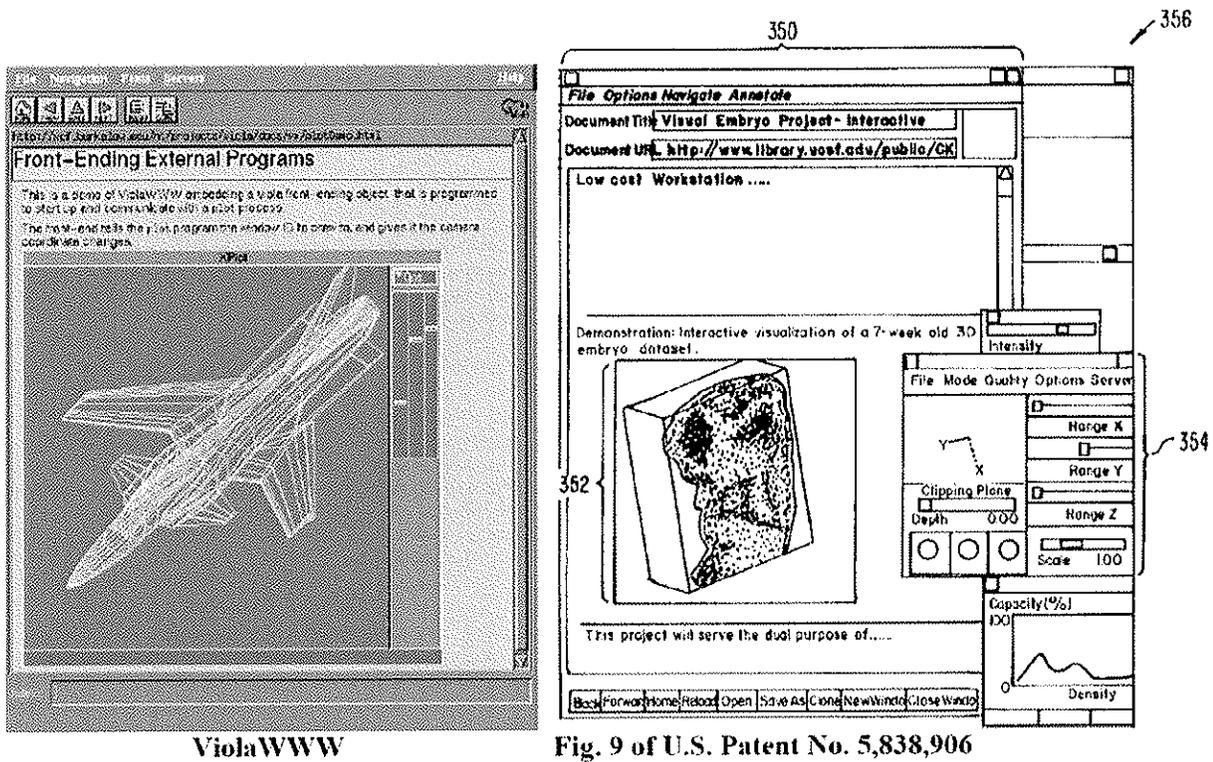

Fig. 9 of U.S. Patent No. 5,838,906

Both the ViolaWWW browser (on the left) and the preferred embodiment of the '906 patent (on the right) enabled a user to interact with a 3-dimensional image embedded in the middle of a webpage. In the ViolaWWW screenshot above, there are three slide controls to the right of the embedded image that move up and down; these rotate the embedded image on the X, Y, and Z axes. Similarly, in the preferred embodiment of the '906 patent shown above, box 254 has three slide controls to the right of the embedded image that rotate the image on the X, Y, and Z axes. Thus, ViolaWWW, like the '906 patent, teaches a browser capable of displaying embedded interactive objects.

165. The Manual of Patent Examining Procedure in force at the time the application for the '906 patent was filed included the following statements:

Materiality is defined in 27 CFR 1.56(b) and discussed herein at MPEP § 2001.05. In addition to prior art such as patents and publications, 27 CFR 1.56 includes, for example, information on *possible prior public uses*, sales, offers to sell, derived knowledge, *prior invention by another*, inventorship conflicts, and the like. [emphasis in bold added]

166. The Manual of Patent Examining Procedure in force today contains similar language:

Materiality is defined in 27 CFR 1.56(b) and discussed herein at MPEP § 2001.05. In addition to prior art such as patents and publications, 27 CFR 1.56 includes, for example, information on >enablement,< **possible prior public uses**, sales, offers to sell, derived knowledge, **prior invention by another**, inventorship conflicts, and the like. >“Materiality is not limited to prior art but embraces *any* information that a reasonable examiner would be substantially likely to consider important in deciding whether to allow an application to issue as a patent.” *Bristol-Myers Squibb Co. v. Rhone-Poulenc Rorer, Inc.*, 226 F.3d 1226, 1224, 66 USPQ2d 1481, 1486 (Fed. Cir. 2003) (emphasis in original) (finding article which was not prior art to be material to enablement issue).< [emphasis in bold added].

167. The Federal Circuit has confirmed that the ViolaWWW browser was material to the patentability of the claimed inventions in the '906 patent.

168. The Federal Circuit held that a reasonable jury could find at least claims 1 and 6 of the '906 patent anticipated by the ViolaWWW browser under 23 U.S.C. § 102(a), (b), and/or (g). *See* 299 F.3d 1225, 1229, 1232–25 (Fed. Cir. 2005).

169. The Federal Circuit held that “Wei’s May 7, 1993 demonstration to two Sun Microsystems employees without confidentiality agreements was a public use under [35 U.S.C. § 102(b)].” 299 F.3d 1225, 1235 (Fed. Cir. 2005).

170. The Federal Circuit held that a reasonable jury could find at least claims 1 and 6 of the '906 patent obvious in light of the ViolaWWW browser. *See* 299 F.3d 1225, 1235 (Fed. Cir. 2005).

171. The Federal Circuit held that a district court could find that Doyle had committed inequitable conduct by failing to disclose the ViolaWWW browser to the Patent Office. *See* 299 F.3d 1225, 1236 (Fed. Cir. 2005).

172. Thus, Krueger was aware that the Federal Circuit confirmed that the ViolaWWW browser was material to the patentability of the claimed invention in the '906 patent.

173. Even after Krueger was aware that the Federal Circuit confirmed that the ViolaWWW browser was material to the patentability of the claimed invention in the '906 patent he did not disclose any additional information to help the Patent Office consider ViolaWWW browser.

174. The Patent Office has also confirmed that the ViolaWWW browser was material to the patentability of the claimed inventions in the '906 patent.

175. On or about July 20, 2007, during the 2005 reexamination of the '906 patent, the Patent Office rejected all claims of the '906 patent as being anticipated by DX95, which includes a copy of the text found in Pei Wei's Viola paper dated August 16, 1994.

176. Pei Wei had told Doyle on August 21, 1994, about the Viola paper dated August 16, 1994, and Doyle had downloaded and read that paper the same day, yet Doyle never disclosed the Viola paper to the Patent Office during the original examination of the '906 patent.

177. The fact that Doyle may have conceived of the inventions claimed in the '906 patent before August 16, 1994, does not render the Viola paper immaterial, because the Viola paper describes features of the ViolaWWW browser that existed before the invention date for the '906 patent and/or over one year before the application for the '906 patent was filed.

178. For example, the plotting demo described in the Viola paper dated August 16, 1994, was part of the ViolaWWW browser software that was demonstrated to Sun Microsystems on May 7, 1993 — over one year before the application for the '906 patent was filed.

179. None of the claimed inventions in the '906 patent was conceived before August 1993.

180. Thus, the ViolaWWW browser software that was described in the Viola paper dated August 16, 1994, and demonstrated to Sun Microsystems on May 7, 1993, also corroborates anticipation of the claimed inventions in the '906 patent under 35 U.S.C. § 102(g).

181. Neither reexamination of the '906 patent considered whether the claimed inventions were anticipated by “Wei's May 7, 1993 demonstration to two Sun Microsystems employees without confidentiality agreements” which the Federal Circuit has held was a “public use under [35 U.S.C. § 102(b)].” 299 F.3d 1225, 1235 (Fed. Cir. 2005).

182. In an *ex parte* reexamination, “[r]ejections will not be based on matters other than patents or

printed publications, such as public use.” See Manual of Patent Examining Procedure (MPEP) § 225 8(I).

183. Krueger knew that the Patent Office could not consider public use art during an *ex parte* reexamination.

184. The Patent Office had the authority during the original examination of the '906 patent to issue a rejection based on the “public use” provision of 35 U.S.C. § 102(b), but Doyle and Krueger never disclosed to the Patent Office during that examination the evidence he had in their possession that the ViolaWWW browser was in “public use” more than one year before the application for the '906 patent was filed.

185. On information and belief, the Patent Office would not have allowed the claims of the '906 patent if Doyle or Krueger had not engaged in inequitable conduct and instead had fulfilled their duty of candor and good faith in dealing with the Patent Office.

5. Doyle and Krueger intended to deceive the Patent Office during prosecution of the '906 patent

186. During prosecution of application number 08/224,443, which matured into the '906 patent, Doyle withheld extensive evidence about the ViolaWWW browser. For example, Doyle failed to disclose the following material information: the message from Raggett about the ViolaWWW browser and embedded objects; the communications with Pei Wei in 1994 about the ViolaWWW browser and the embedded interactive plotting demo that was in public use in May 1993; the Viola paper describing the ViolaWWW browser and the embedded interactive plotting demo that was in public use in May 1993; the communications with Pei Wei in 1995 about the ViolaWWW browser and the embedded interactive plotting demo that was in public use in May 1993 and again at the Wizards conference in July 1993; the contents of the “Viola stuff” folder that Doyle maintained, which included information about the Wizards conference in July 1993 and links to the ViolaWWW browser software, including source code for the embedded interactive plotting demo that was in public use in May 1993; and Pei Wei’s talk at Stanford in September 1994 about the embedded interactive plotting demo that was

in public use in May 1993.

187. On information and belief, Krueger failed to disclose a number of material references regarding the ViolaWWW browser including at least the August 1994 Viola paper, Doyle's communications with Pei Wei in 1994 about the ViolaWWW browser and the embedded interactive plotting demo that was in public use in May 1993; the Viola paper describing the ViolaWWW browser and the embedded interactive plotting demo that was in public use in May 1993; and the contents of the "Viola stuff" folder that Doyle maintained and was faxed to Krueger in August of 1998, which included information about the Wizards conference in July 1993 and links to the ViolaWWW browser software, including source code for the embedded interactive plotting demo that was in public use in May 1993.

188. Doyle and Krueger withheld information about the ViolaWWW browser with the specific intent to deceive the Patent Office.

189. Doyle had a financial interest in the patentability of the claimed inventions in the '906 patent.

190. The ViolaWWW browser threatened the patentability of the claimed inventions in the '906 patent, and thus threatened Doyle's financial interests.

191. Doyle was personally involved in the prosecution of application number 08/224,443, which matured into the '906 patent.

192. For example, Doyle signed a declaration on or about November 22, 1994, stating that he was an inventor and acknowledging his duty of candor and good faith in dealing with the Patent Office.

193. On or about January 2, 1997, Doyle signed a declaration that was submitted to the Patent Office in an effort to establish an earlier date of invention for the claims of the '906 patent application.

194. On or about February 24, 1997, Doyle and Krueger participated in an examiner interview in an effort to secure allowance of the claims of the '906 patent application.

195. On or about May 27, 1997, Doyle signed a 28-page declaration (including an appendix)

that was submitted to the Patent Office in an effort to establish himself as an “expert” in the subject matter of the claimed invention and to overcome various obviousness rejections to the claims of the '906 patent application.

196. On or about October 29, 1997, Doyle signed another declaration that was submitted to the Patent Office in an effort to establish an earlier date of invention for the claims of the '906 patent application.

197. On or about November 6, 1997, Doyle and Krueger participated in another examiner interview in an effort to secure allowance of the claims of the '906 patent application.

198. Krueger lacked a technical degree in computer science or electrical engineering, and thus he relied on Doyle to understand and describe the subject matter of the claimed invention and the prior art.

199. Doyle personally reviewed and approved papers submitted to the Patent Office during prosecution of the '906 patent.

200. Despite Doyle and Krueger's extensive personal involvement in the prosecution of application number 08/224,443, which matured into the '906 patent, Doyle never disclosed the ViolaWWW browser to the Patent Office during that prosecution.

201. The circumstances of Doyle and Krueger's actions demonstrate an intent to deceive the Patent Office.

202. For example, during prosecution of the '906 patent, Doyle made arguments for patentability that could not have been made if he had disclosed the ViolaWWW browser to the Patent Office.

203. On or about May 6, 1996, the Patent Office rejected several claims as being anticipated by the University of Southern California's “Mercury Project.”

204. On or about August 6, 1996, a response to this rejection was submitted to the Patent

Office.

205. Doyle personally reviewed and approved the response submitted to the Patent Office on or about August 6, 1996.

206. The response submitted on or about August 6, 1996, included the following statements:

The claimed combination is fundamentally different from the Mercury Project. In the claimed combination, the external object and executable object are embedded by reference in the HTML document and the object is displayed and processed within the same window where a portion of the original document is displayed. In the Mercury Project information is passed back to the server and a new document is generated and displayed. There is no display and processing the external object within the window in which a portion of the original document is displayed.

207. If Doyle or Krueger had disclosed the ViolaWWW prior art to the Patent Office, it would not have been possible to distinguish the claims of the '906 patent over the prior art on the basis that the prior art failed to disclose "display[ing] and processing the external object within the window in which a portion of the original document is displayed."

208. On or about March 26, 1997, the Patent Office rejected several claims as being obvious in light of "Khoyi et al. US Patent 5,206,951" in combination with other prior art.

209. On or about June 2, 1997, a response to this rejection was submitted to the Patent Office.

210. Doyle and Krueger personally reviewed and approved the response submitted to the Patent Office on or about June 2, 1997.

211. The response submitted on or about June 2, 1997, included the following statements:

[T]here is no suggestion in Khoyi of modifying Mosaic so that an external application . . . is invoked to display and interactively process the object within the document window while the document is displayed by Mosaic in the same window.

212. If Doyle or Krueger had disclosed the ViolaWWW prior art to the Patent Office, it would not have been possible to distinguish the claims of the '906 patent over the prior art on the basis that the prior art failed to disclose "an external application [that] is invoked to display and interactively

process the object within the document window while the document is displayed by [the browser] in the same window.”

213. On or about August 25, 1997, the Patent Office rejected several claims as being obvious in light of “Koppolu et al. US Patent 5,581,686” in combination with other prior art.

214. On or about December 23, 1997, a response to this rejection was submitted to the Patent Office.

215. Doyle and Krueger personally reviewed and approved the response submitted to the Patent Office on or about December 23 1997.

216. The response submitted on or about December 23, 1997, included the following statements:

[T]here is no disclosure or suggestion in Mosaic or Koppolu of automatically invoking an external application when an embed text format is parsed. Each of those references require user input, specifically clicking with a mouse pointer, to activate external applications to allow display and interaction with an external object.

217. If Doyle or Krueger had disclosed the ViolaWWW prior art to the Patent Office, it would not have been possible to distinguish the claims of the '906 patent on the basis that the prior art failed to disclose “automatically invoking an external application when an embed text format is parsed.”

218. Doyle and Krueger’s repeated use of arguments that could not have been made if Doyle or Krueger had disclosed the ViolaWWW prior art demonstrates an intent to deceive the Patent Office.

219. Doyle’s intent to deceive the Patent Office is also demonstrated by comparing what he told an audience of web developers on or about March 27, 1995, to what he told the Patent Office on or about May 27, 1997.

220. On or about March 27, 1995, Doyle responded to a post on the publicly-accessible WWW-talk e-mail distribution list in which another author had written, under the heading “HotJava is here! And it *rocks*,” “It’s the most exciting thing to happen to the Web since viola.” Doyle’s response included the following statements:

If you take a close look at Java, you'll realize that it bears a close similarity to Viola, since the "applets" must be coded from a predefined language, downloaded and locally interpreted.

221. On or about May 27, 1997, Doyle signed a declaration that was submitted to the Patent Office. Doyle's declaration included the following statements:

The three exemplary products which incorporate the features of the claimed invention include Netscape Navigator 2.0 (or newer versions), Java, from Sun Microsystems, and ActiveX, from Microsoft. . . . [T]he success of these products is directly attributable to the claimed features of the invention.

....

A good indicator that Sun Microsystems felt that enabling interactivity in Web pages was the key feature of Java is given in the first chapter of "Hooked on Java," which was written by members of the original Java development team. They say, "With applets written in the Java programming language, Web users can design Web pages that include animation, graphics, games, and other special effects. **Most important, Java applets can make Web pages highly interactive.**"

This statement shows that the developers of Java felt that the most important feature of the Java technology was the ability of Java to allow an embed text format (the applet tag) within a Web document to be parsed by a Web browser to automatically invoke an external executable application to execute on the client workstation in order to display an external object and enable interactive processing of that object within a display window created at the applet tag's location within the hypermedia document being displayed in the browser-controlled window. The book's authors further emphasize the novelty and nonobviousness of this technology when they say, "Quite simply, Java-powered pages are Web pages that have Java applets embedded in them.

They are also the Web pages with the coolest special effects around Remember, **you need a Java-compatible Web browser such as HotJava to view and hear these pages and to interact with them; otherwise, all you'll access is static Web pages minus the special effects.**"

....

The above citations, as well as the additional details given in Appendix A, provide ample evidence of the commercial success of products incorporating features of the claimed invention, as well as evidence of the widespread acclaim that these products have garnered for the technical innovations which the features of the claimed invention allowed them to provide. They further show that the successes of these products was a direct result of the features of the claimed invention, which they incorporated *through implementation of an embed text format that is parsed by a Web browser to automatically invoke an external*

executable application to execute on the client workstation in order to display an external object and enable interactive processing of that object within a display window created at the embed text format's location within the hypermedia document being displayed in the browser-controlled window.

222. The declaration Doyle signed on or about May 27, 1997, made no mention of Viola or the ViolaWWW browser.

223. Doyle and Krueger's disclosure of Java for purposes of commercial success, but not the ViolaWWW browser which Doyle knew was prior art that existed over one year before the application for the '906 patent was filed, demonstrates an intent to deceive the Patent Office, especially given Doyle's belief that Viola was similar to Java and that Java embodied the claimed invention.

6. Between 1999 and 2003, Doyle learned about additional Viola prior art, and learned that an expert in the field believed that the plotting demo for the ViolaWWW browser anticipated the asserted claims of the '906 patent

224. Between 1999 and 2003, a third party disputed the validity of the '906 patent.

225. Doyle personally guided Eolas through the litigation concerning the validity of the '906 patent.

226. Throughout the litigation, the third party asserted that the plotting demo involving the ViolaWWW browser anticipated the asserted claims of the '906 patent.

227. The plotting demo relied on by the third party to prove anticipation of the asserted claims of the '906 patent was the same plotting demo that Pei Wei had repeatedly described to Doyle, and which the Federal Circuit has held was a "public use" on May 7, 1993, 299 F.3d 1225, 1235 (Fed. Cir. 2005), and which Doyle himself came across from his own research into Viola.

228. In its contentions that the plotting demo involving the ViolaWWW browser anticipated the asserted claims of the '906 patent, the third party specifically identified the VOBJF tag, the plot.v file, and the vplot executable application.

229. For example, on or about December 14, 2001, the third party served an expert report by Dr. John P.J. Kelly, that included the following statements:

When ViolaWWW encountered the tag `<VOBJF>/usr/work/viola/apps/plot.v</VOBJF>`, an embed text format specifying the location of an object, it looked in the specified path for at least part of the object, parsed the path, and automatically loaded the object into the program. The file (plot.v) also contained type information associated with the object, such as the name and location of an external executable application, vplot, that also was automatically invoked to enable display of and user interaction with the object at a location within a display area within the document being displayed in the browser-controlled window corresponding to the location of the embed text format in the document. Subsequently, when the user interacted with the object, ViolaWWW sent messages to vplot based on the user input and received output from vplot, thus updating the display of the object.

230. Similarly, at a trial in 2003 concerning the validity of the '906 patent, Dr. Kelly testified that the plotting demo involving the ViolaWWW browser anticipated the asserted claims of the '906 patent, and he specifically identified the VOBJF tag, the plot.v file, and the vplot executable application for purposes of his anticipation analysis.

231. Pei Wei also testified at the trial in 2003 about the ViolaWWW browser and the plotting demo.

232. At the trial, exhibit DX24 included source code for the ViolaWWW browser dated May 12, 1993.

233. At the trial, exhibit DX27 included source code for the ViolaWWW browser dated May 27, 1993.

234. DX24 contains the code for the plotting demo that Pei Wei demonstrated to Sun Microsystems on May 7, 1993, in Northern California.

235. DX27 contains code for a plotting demo similar to the plotting demo in DX24.

236. On May 21, 1993, Pei Wei posted DX27 on a publicly-accessible Internet site and notified an engineer at Sun Microsystems that DX27 was available for downloading.

237. Under 35 U.S.C. § 102(b), DX27 was a "printed publication" over one year before the application for the '906 patent was filed.

238. Dr. Kelly testified that the plotting demo in DX24 and DX27 anticipates the asserted

claims of the '906 patent. Dr. Kelly specifically identified the VOBJF tag, the plot.v file, and the vplot executable application for purposes of his anticipation analysis of DX27.

239. The Federal Circuit has held that Dr. Kelly's testimony would allow a reasonable jury to conclude that DX27 anticipates at least claims 1 and 6 of the '906 patent. *See* 299 F.3d 1225, 1235 (Fed. Cir. 2005).

240. Neither Dr. Kelly nor the third party ever relied on anything other than the plotting demo involving plot.v and vplot to prove anticipation by the ViolaWWW browser.

241. For example, Dr. Kelly never discussed clock.v during the trial in July and August 2003.

242. Doyle attended the trial involving the third party held in July and August 2003.

243. By the end of the trial in August 2003, Doyle knew about and understood the third party's contention that the plotting demo involving the ViolaWWW browser in DX27 anticipated the asserted claims of the '906 patent.

244. By the end of the trial in August 2003, Doyle knew about and understood Pei Wei's testimony that on May 21, 1993 — over one year before the application for the '906 patent was filed — he posted DX27 on a publicly-accessible Internet site and notified an engineer at Sun Microsystems that DX27 was available for downloading.

7. During the 2003 reexamination of the '906 patent, Doyle and Krueger concealed material information about the ViolaWWW plotting demo that Pei Wei and an expert had repeatedly contended anticipated the '906 patent

245. On or about October 20, 2003, the Director of the Patent Office initiated a reexamination of the '906 patent. The control number for this reexamination was 90/006,821.

246. During the 2003 reexamination, Doyle withheld information about the ViolaWWW browser with the specific intent to deceive the Patent Office.

247. Doyle had a financial interest in the patentability of the claimed inventions in the '906

patent.

248. The ViolaWWW browser threatened the patentability of the claimed inventions in the '906 patent, and thus threatened Doyle's financial interests.

249. Doyle and Krueger were personally involved in the 2003 reexamination of the '906 patent.

250. For example, on or about April 27, 2004, Doyle and Krueger participated in an examiner interview in an effort to confirm the patentability of the claims of the '906 patent application. Doyle gave the examiner a presentation supported by approximately 22 slides prepared by Doyle and Krueger, none of which discussed DX27 or the ViolaWWW browser. Neither Doyle nor Krueger mentioned the ViolaWWW browser during the interview.

251. On or about May 6, 2004, Doyle signed a declaration that was submitted to the Patent Office in an effort to confirm the patentability of the claims of the '906 patent application. This declaration made no mention of DX27 or the ViolaWWW browser.

252. On or about August 18, 2005, Doyle and Krueger participated in an examiner interview in an effort to confirm the patentability of the claims of the '906 patent application. Doyle gave the examiner a presentation supported by approximately 26 slides, none of which discussed DX27 or the ViolaWWW browser.

253. During the 2003 reexamination, Doyle and Krueger submitted selected information from the litigation with the third party concerning the validity of the '906 patent, but he withheld information that would have identified for the examiner the key features of the prior art ViolaWWW browser and how they matched up to the asserted claims of the '906 patent. This proved critical during the 2003 reexamination because when the examiner decided to look at the source code for the ViolaWWW browser, he missed the key points.

254. On or about December 20, 2003, Doyle and Krueger submitted to the Patent Office a

CD containing two compressed zip files, one for the "DX24" version of the ViolaWWW source code dated May 12, 1993, and the other for the "DX27" version of the ViolaWWW source code dated May 27, 1993.

255. The compressed zip file for DX24 that Doyle and Kruger submitted to the Patent Office was named viola920512.tar.gz.zip. When unzipped, it contained 1,027 files in 25 folders consisting of 8 total megabytes in size.

256. The compressed zip file for DX27 that Doyle and Krueger submitted to the Patent Office was named violaTOGO.tar.Z.zip. When unzipped, it contained 1,020 files in 24 folders consisting of 7.7 total megabytes in size.

257. DX24 and DX27 contained source code for the ViolaWWW browser.

258. Source code cannot be executed by a computer. Source code must be compiled into binary code before it can be executed by a computer.

259. Without the compiled binary code, and without a suitable computer capable of executing that binary code (such as a Sun SPARCstation from the early 1990s), the Patent Office had no practical way to see the ViolaWWW browser in operation.

260. Given the voluminous nature of the contents of DX24 and DX27, and the practical inability of the Patent Office to run the ViolaWWW browser on a computer, it was especially important for Doyle and Krueger to be candid with the Patent Office about the contents of DX24 and DX27 so that the Patent Office could focus on the relevant files.

261. Doyle and Krueger were not candid and instead withheld material information that would have assisted the Patent Office in understanding the contents of DX24 and DX27.

262. Doyle and Krueger did not disclose the full contents of DX24 and DX27 in their entirety to the Patent Office during the first reexamination of the '906 patent.

263. The full contents of DX24 and DX27 were not submitted in their entirety until the Invention

Disclosure Statement filed on November 1, 2006.

264. For example, during the 2003 reexamination, Doyle and Krueger did not disclose to the Patent Office the trial testimony of Pei Wei, who testified about the plotting demo in DX24 and DX27; Doyle and Krueger did not disclose the trial testimony of Dr. Kelly, who testified that the plotting demo in DX24 and DX27 anticipated the asserted claims of the '906 patent; and Doyle and Krueger did not disclose that Dr. Kelly specifically identified the VOBJF tag, the plot.v file, and the vplot executable application for purposes of his anticipation analysis,

265. On March 2, 2005 — while the 2003 reexamination was still pending — the Federal Circuit held that Dr. Kelly's testimony would allow a reasonable jury to conclude that DX27 anticipates at least claims 1 and 6 of the '906 patent. 299 F.3d 1225, 1235 (Fed. Cir. 2005).

266. Even after the Federal Circuit's decision, however, Doyle still did not disclose Dr. Kelly's testimony to the Patent Office during the 2003 reexamination, nor did he disclose to the Patent Office that Dr. Kelly's anticipation analysis relied upon the VOBJF tag, the plot.v file, and the vplot executable application.

267. On or about September 27, 2005, the examiner issued a statement for reasons of patentability in which the examiner confirmed the patentability of claims 1–10 of the '906 patent.

268. The examiner's statement never discussed the plotting demo that Dr. Kelly had testified anticipated the asserted claims of the '906 patent.

285. When the examiner considered DX27, the examiner did not know where to look or what to look for. There were too many files in DX27 for the examiner to read himself. Thus

269. the examiner was forced to resort to running text searches across all the files in DX27 in the hope of stumbling across relevant information.

270. The examiner used the “dtSearch” program to index and text search all DX27 files that contained textual content. *See* <http://www.dtsearch.com/>.

271. It is unclear what words the examiner searched for or how he came up with his search terms.

272. Doyle knew precisely what to look for, but he never told the examiner. For example, if Doyle or Krueger had told the examiner to look for plot.v, the examiner’s text searches would have quickly found the plotting demo that Dr. Kelly had testified anticipated the asserted claims of the ’906 patent.

273. The examiner’s text searches did not lead him to the plotting demo, but instead led him to a clock application that used the file clock.v.

274. The file clock.v is a script file that displays the image of a clock. The clock application does not involve any separate executable application. It just involves a webpage and the clock.v script file.

275. The examiner reasoned that a script file like clock.v does not satisfy the “executable application” requirement of the claims of the ’906 patent, and thus the examiner concluded that DX27 does not anticipate the asserted claims of the ’906 patent.

291. The ViolaWWW source code teaches two ways of creating interactive webpages using embedded applications. One way is by using a simple script file, such as clock.v. All that is required is a webpage (such as violaApps.html) and the script file (such as clock.v). No binary executable application is involved. The other way taught by the ViolaWWW source code does use a binary executable application (such as vplot) in addition to a webpage and a file that

276. contains the object (such as plot.v). The examiner did not consider this second way during the 2003 reexamination; he only considered the first way, and thus erroneously confirmed the patentability of the asserted claims of the '906 patent.

277. The examiner's reasons for patentability included the following statements:

The Viola system uses "C-like" Viola scripts that must be INTERPRETED by the browser and then TRANSLATED or CONVERTED into binary native executable machine code that can be understood by the CPU. Alternately, the Viola script is precompiled into intermediate byte-code form and the byte-code is interpreted (i.e., translated) into binary native executable machine code at runtime. This extra step of translation results in an unavoidable performance penalty, as interpreted applications run much slower than compiled native binary executable applications. Accordingly, the "C-like" Viola scripts (or corresponding bytecode representations) are not "executable applications"

278. The examiner's reasoning overlooked the fact that the plotting demo in DX27 does use a separate executable application: vplot.

279. Doyle and Krueger knew that the plotting demo used a separate executable application, but Doyle did not bring this fact to the examiner's attention and instead allowed the examiner to confirm the patentability of the claims of the '906 patent on the basis of an incomplete understanding of DX27.

280. Doyle and Krueger knew that the plotting demo used a separate executable application for at least the following reasons:

The Viola paper dated August 16, 1994, which states "This next mini application front-ends a graphing process (on the same machine as the viola process)" and which shows the plot of a fighter jet in a window titled "XPlot."

Pei Wei's message to Doyle on September 1, 1994, which included the following statements: "[A]s for the plotting demo, it actually is really just a front-end that fires up a back-end plotting program (and the point is that that back-end could very well be running on a remote super

computer instead of the localhost). For that demo, there is a simple protocol such that the frontend app could pass an X window ID to the back-end, and the back-end draws the graphics directly onto the window violaWWW has opened for it.”

The source code listed in the “Viola stuff” file included the file plotDemo.html, which states, “This is a demo of ViolaWWW embedding a viola front-ending object that is programmed to start up and communicate with a plot process. The front-end tells the plot program the window ID to draw to, and gives it the camera coordinate changes.” When the file plotDemo.html is parsed, it shows the plot of a fighter jet in a window titled “XPlot.”

Pei Wei’s presentation at Stanford in September 1994, which included the following statements: “The next example is a front-end application to a backend. And the back-end is what actually does the computation and the drawing.” Included with the presentation was a screenshot of the ViolaWWW browser after parsing the file plotDemo.html. The screenshot shows the plot of a fighter jet in a window titled “XPlot.” The text in the webpage states, “This is a demo of ViolaWWW embedding a viola front-ending object that is programmed to start up and communicate with a plot process. The front-end tells the plot program the window ID to draw to, and gives it the camera coordinate changes.”

The trial testimony of Pei Wei.

The expert opinion of Dr. Kelly.

281. Doyle and Krueger’s failure to tell the examiner about the vplot and plot.v files, and failure to disclose documents from the litigation that identified how Dr. Kelly matched up the plotting demo in DX27 with the claims of the ’906 patent, both alone and in combination with Doyle and Krueger’s prior failure to disclose the ViolaWWW browser during the original prosecution of the ’906 patent, constituted a knowing and intentional violation of their duty of candor and good faith in dealing with the Patent Office.

282. On information and belief, the Patent Office would not have confirmed the patentability of the claims of the ’906 patent that were the subject of the 2003 reexamination if

Doyle and Krueger did not engaged in inequitable conduct and instead had fulfilled their duty of candor and good faith in dealing with the Patent Office.

8. Doyle and Krueger's inequitable conduct during the 2003 reexamination infected the 2005 reexamination

283. On or about December 22, 2005, a third party filed a request to reexamine the '906 patent.

284. On or about February 9, 2006, the Patent Office granted the request to reexamine the '906 patent. The control number for this reexamination was 90/007,858.

285. Doyle had a financial interest in the patentability of the claimed inventions in the '906 patent.

286. The ViolaWWW browser threatened the patentability of the claimed inventions in the '906 patent, and thus threatened Doyle's financial interests.

287. Doyle and Krueger were personally involved in the 2005 reexamination of the '906 patent.

288. For example, on or about September 6, 2007, Doyle and Krueger participated in an examiner interview in an effort to confirm the patentability of the claims of the '906 patent application.

289. On or about October 1, 2007, Doyle submitted a declaration to the Patent Office in an effort to establish an earlier date of invention for the claims of the '906 patent application.

290. On or about May 9, 2008, Doyle and Krueger participated in another examiner interview in an effort to confirm the patentability of the claims of the '906 patent application.

291. On or about June 3, 2008, Doyle and Krueger participated in another examiner interview in an effort to confirm the patentability of the claims of the '906 patent application.

292. Doyle and Krueger's inequitable conduct during the 2003 reexamination infected the 2005 reexamination.

293. Although Doyle and Krueger disclosed material information about the ViolaWWW browser to the Patent Office during the 2005 reexamination, by that time it was too late.

294. For example, Doyle and Krueger disclosed the Viola paper dated August 16, 1994, to the Patent Office on or about August 21, 2006.

295. This was the first time Doyle or Krueger had disclosed the Viola paper dated August 16, 1994 to the Patent Office.

296. Doyle knew about the Viola paper no later than August 21, 1994, but Doyle waited over 10 years — and two prosecutions of the '906 patent — to disclose that paper to the Patent Office.

297. Krueger knew about the Viola paper no later than August of 1998, but Krueger waited 8 years — and two prosecutions of the '906 patent — to disclose that paper to the Patent Office.

298. Shortly after Doyle and Krueger disclosed the Viola paper dated August 16, 1994, to the Patent Office during the 2005 reexamination, the Patent Office rejected all claims of the '906 patent.

299. The rejection based on the Viola paper dated August 16, 1994, confirms that the ViolaWWW browser was material prior art.

300. Doyle and Krueger did not respond to the merits of the rejection based on the Viola paper dated August 16, 1994, however. Instead Doyle filed a declaration asserting that his date of invention was before August 16, 1994.

301. In response to Doyle's declaration, the examiner withdrew the rejection based on the Viola paper dated August 16, 1994.

302. The 2005 examiner could have entered a new rejection based on DX27, which was a printed publication before the alleged conception of the inventions claimed in the '906 patent, but the 2005 examiner did not independently examine DX27 because the 2003 examiner had already concluded that DX27 did not invalidate the asserted claims of the '906 patent.

303. The conclusions about DX27 reached in the 2003 reexamination were erroneous due to Doyle's inequitable conduct during that reexamination.

304. Thus, Doyle and Krueger's inequitable conduct during the 2003 reexamination infected the 2005 reexamination.

C. Doyle submitted false statements about the secondary considerations of non-obviousness

305. During the original prosecution of the '906 patent, Doyle submitted a declaration to the Patent Office containing false and misleading statements in an effort to obtain allowance of the claims.

306. Specifically, on or about June 2, 1997, Doyle submitted to the Patent Office a sworn declaration executed on or about May 27, 1997, for the purpose of overcoming the examiner's rejection on March 26, 1997.

307. On page 12 of the declaration, Doyle asserted that his claimed invention would not have been obvious over the cited prior art in view of "secondary considerations, including, in part, commercial success of products incorporating features of the claimed invention and industry recognition of the innovative nature of these products."

308. In support of his assertion, Doyle declared to the Patent Office that Sun Microsystems and Netscape had incorporated his invention into their Java software and Navigator Web browser, respectively. He stated: "Approximately 12 to 18 months after the applicants initially demonstrated the first Web plug-in and applet technology to the founders of Netscape and engineers employed by Sun Microsystems in November and December of 1993, as described in reference #4 from Appendix A (Dr. Dobb's Journal, 2/96), both Netscape and Sun released software products that incorporated features of the claimed invention"

309. This statement was false. Neither Doyle nor any of the other named inventors of the '906 patent demonstrated Web plug-in technology to any of the founders of Netscape in November or December of 1993.

310. When Doyle made these statements under oath, he also did not know whether any engineer employed by Sun Microsystems ever saw any of his demonstrations in November or December of 1993.

311. Doyle made these same false assertions in slides that he prepared and presented to the examiner in a personal interview on or about February 24, 1997. On a slide entitled "Relevant History of DHOE" (Doyle's name for his invention), Doyle included as a bullet point: "1993 Demos to Sun & Netscape's Founders."

312. Doyle's false statements in his declaration were material to the patentability of the pending claims. These statements purported to provide evidence of copying by others and thus objective evidence of nonobviousness, a factor to be considered in determining whether an alleged invention is patentable over the prior art. Without these false assertions, Doyle had no support for his argument that Netscape and Sun copied his alleged invention or that his technology was responsible for their commercial success.

313. By making these false statements under oath to the Patent Office, Doyle intended to mislead the Patent Office to believe that responsible persons at Netscape and Sun saw his alleged invention, appreciated its supposed merits, and therefore incorporated it into the Navigator browser and Java. Moreover, by making these false statements, Doyle was trying to convince the Patent Office that the Netscape and Sun products succeeded because they incorporated his alleged invention.

314. Doyle's submission of false statements under oath in his declaration to the Patent Office constituted a knowing and intentional violation of his duty of candor and good faith in dealing with the Patent Office.

315. A judicial determination of the respective rights of the parties with respect to the unenforceability of the claims of the '906 Patent is now necessary and appropriate under 28 U.S.C. § 2201.

ELEVENTH DEFENSE

316. To the extent that Plaintiff's claims are based on acts performed by the Microsoft Explorer browser or a user's use thereof, there can be no direct, and, therefore, no indirect infringement due to Microsoft's purported license to the '906 Patent and/or the '985 Patent.

TWELFTH DEFENSE

317. Plaintiff's claims are barred by the equitable doctrines of laches, waiver, and/or unclean hands.

THIRTEENTH DEFENSE

318. To the extent Plaintiff seeks damages for alleged infringement more than six years prior to filing of this action, the relief sought by Eolas is barred by 35 U.S.C. §§ 286, 287, and 288. In particular, Plaintiff has stipulated that it will not seek pre-suit damages in this action.

FOURTEENTH DEFENSE

319. Plaintiff's claims against Frito-Lay are barred by the doctrine of patent exhaustion to the extent Plaintiff has already exhausted its rights to the '906 and/or the '985 Patent.

FIFTEENTH DEFENSE

320. Plaintiff's claims against Frito-Lay are barred to the extent that Frito-Lay is a third-party beneficiary to an express or implied license granting rights to the '906 and/or '985 Patent, including without limitation licenses to Microsoft, Oracle, and Apple.

SIXTEENTH DEFENSE

321. Plaintiff's claims against Frito-Lay are barred by the doctrine of equitable estoppels.

SEVENTEENTH DEFENSE

322. Plaintiff's claims are improper to the extent that Plaintiff seeks asserted infringement of claims that are subject to Frito-Lay's intervening rights.

COUNTERCLAIMS

323. Frito-Lay incorporates its responses as set forth above as though fully set forth herein.

324. Frito-Lay has not directly or indirectly infringed, contributed to or induced infringement of any valid or enforceable claim of the '906 Patent or the '985 Patent, and has not otherwise committed any acts in violation of 35 U.S.C. §271.

325. The '906 Patent and the '985 Patent, and every claim thereof, are invalid for failing to meet the conditions for patentability as set forth in 35 U.S.C. §§100, 101, 102, 103 and 112.

326. The '906 Patent and the '985 Patent, and every claim thereof, are unenforceable due to inequitable conduct before the United States Patent and Trademark Office.

327. An actual controversy exists between Frito-Lay and Plaintiff concerning the alleged infringement and validity of the '906 Patent and the '985 Patent by virtue of Plaintiff's Complaint herein.

328. Frito-Lay is entitled to judgment from this Court that no claim of either the '906 Patent or the '985 Patent has been infringed by Frito-Lay, and that all claims are invalid.

329. This is an exceptional case entitling Frito-Lay to an award of its attorney's fees incurred in connection with this action pursuant to 35 U.S.C. §285.

330. Frito-Lay continues to investigate this matter and reserves the right to amend its Answer and/or Counterclaims to assert any additional defenses or counterclaims that come to light upon further investigation and discovery.

PRAYER FOR RELIEF

WHEREFORE Frito-Lay prays that:

- 331. the Court dismiss the Complaint against Frito-Lay with prejudice;
- 332. the Court declare that Frito-Lay has not and does not infringe the '906 Patent or the '985 Patent;
- 333. the Court declare that the '906 Patent and the '985 Patent are invalid;
- 334. the Court declare that the '906 Patent and the '985 Patent are unenforceable;
- 335. the Court declare that Eolas is not entitled to any remedy or relief whatsoever against Frito-Lay;

336. the Court award Frito-Lay its costs, together with reasonable attorneys fees and all of its expenses for this suit because this is an exceptional case under 35 U.S.C. §285; and

337. the Court award Frito-Lay such other relief as this Court may deem just and proper at law or in equity.

Dated: October 14, 2011.

Respectfully submitted,
