

UNITED STATES DISTRICT COURT
FOR THE EASTERN DISTRICT OF TEXAS
TYLER DIVISION

EOLAS TECHNOLOGIES INCORPORATED, §
Plaintiff, §
v. §
ADOBE SYSTEMS INCORPORATED, *et al.*, §
Defendants. §

Civil Cause No. 6:09-cv-00446-LED

Jury Trial Demanded

**J.C. PENNEY CORPORATION, INC.’S ANSWER TO
PLAINTIFFS’ THIRD AMENDED COMPLAINT,
AFFIRMATIVE DEFENSES AND COUNTERCLAIMS**

Defendant J.C. Penney Corporation, Inc. (“JCP”) hereby submits its Third Amended Answer to Eolas Technologies Incorporated (“Eolas”) and The Regents of the University of California’s (the “University”) (collectively, “Plaintiffs”) Third Amended Complaint (“Complaint,” Dkt. 891).

ANSWER

I. PARTIES

1. JCP lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 1 of the Complaint and therefore, denies them.
2. JCP lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 2 of the Complaint and therefore, denies them.
3. JCP is not required to answer to the allegations contained in Paragraph 3 of the Complaint because the allegations are not directed to JCP. Moreover, JCP lacks sufficient

knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 3 and, therefore, denies them.

4. JCP is not required to answer to the allegations contained in Paragraph 4 of the Complaint because the allegations are not directed to JCP. Moreover, JCP lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 4 and, therefore, denies them.

5. JCP is not required to answer to the allegations contained in Paragraph 5 of the Complaint because the allegations are not directed to JCP. Moreover, JCP lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 5 and, therefore, denies them.

6. JCP is not required to answer to the allegations contained in Paragraph 6 of the Complaint because the allegations are not directed to JCP. Moreover, JCP lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 6 and, therefore, denies them.

7. JCP is not required to answer to the allegations contained in Paragraph 7 of the Complaint because the allegations are not directed to JCP. Moreover, JCP lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 7 and, therefore, denies them.

8. JCP is not required to answer to the allegations contained in Paragraph 8 of the Complaint because the allegations are not directed to JCP. Moreover, JCP lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 8 and, therefore, denies them.

9. JCP is not required to answer to the allegations contained in Paragraph 9 of the Complaint because the allegations are not directed to JCP. Moreover, JCP lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 9 and, therefore, denies them.

10. JCP admits to the allegations contained in Paragraph 10 of the Complaint.

11. JCP is not required to answer to the allegations contained in Paragraph 11 of the Complaint because the allegations are not directed to JCP. Moreover, JCP lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 11 and, therefore, denies them.

12. JCP is not required to answer to the allegations contained in Paragraph 12 of the Complaint because the allegations are not directed to JCP. Moreover, JCP lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 12 and, therefore, denies them.

13. JCP is not required to answer to the allegations contained in Paragraph 13 of the Complaint because the allegations are not directed to JCP. Moreover, JCP lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 13 and, therefore, denies them.

II. JURISDICTION AND VENUE

14. JCP incorporates its responses contained in Paragraphs 1-13 as though fully set forth here.

15. JCP admits that the Complaint includes claims of patent infringement that arise under the patent laws of the United States, 35 U.S.C. § 101 *et seq.* JCP admits that this Court has subject matter jurisdiction over this action.

16. JCP admits that it is subject to this Court's personal jurisdiction. Except as expressly admitted herein, JCP lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 16 and, therefore, denies them.

17. JCP admits that venue is proper with respect to JCP. Except as expressly admitted herein, JCP lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 17 and, therefore, denies them.

III. PATENT INFRINGEMENT

18. JCP incorporates its responses contained in Paragraph 1-17 as though fully set forth here.

19. From the face of the United States Patent Nos. 5,838,906 ("the '906 Patent") and 7,599,985 ("the '985 Patent"), the title and date of issuance appears to be as alleged in Paragraph 29 of the Complaint. Except as stated herein, JCP lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 19 and, therefore, denies them.

20. JCP lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 20 and, therefore, denies them.

21. JCP is not required to answer to the allegations contained in Paragraph 21 of the Complaint because the allegations are not directed to JCP. Moreover, JCP lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 21 and, therefore, denies them.

22. JCP is not required to answer to the allegations contained in Paragraph 22 of the Complaint because the allegations are not directed to JCP. Moreover, JCP lacks sufficient

knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 22 and, therefore, denies them.

23. JCP is not required to answer to the allegations contained in Paragraph 23 of the Complaint because the allegations are not directed to JCP. Moreover, JCP lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 23 and, therefore, denies them.

24. JCP is not required to answer to the allegations contained in Paragraph 24 of the Complaint because the allegations are not directed to JCP. Moreover, JCP lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 24 and, therefore, denies them.

25. JCP is not required to answer to the allegations contained in Paragraph 25 of the Complaint because the allegations are not directed to JCP. Moreover, JCP lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 25 and, therefore, denies them.

26. JCP is not required to answer to the allegations contained in Paragraph 26 of the Complaint because the allegations are not directed to JCP. Moreover, JCP lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 26 and, therefore, denies them.

27. JCP is not required to answer to the allegations contained in Paragraph 27 of the Complaint because the allegations are not directed to JCP. Moreover, JCP lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 27 and, therefore, denies them.

28. JCP denies the allegations contained in Paragraph 28, including but not limited to the allegations that it has directly and/or indirectly infringed (by inducement and/or contributory infringement), or is continuing to infringe, directly and/or indirectly, the '906 Patent and/or the '985 Patent.

29. JCP is not required to answer to the allegations contained in Paragraph 29 of the Complaint because the allegations are not directed to JCP. Moreover, JCP lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 29 and, therefore, denies them.

30. JCP is not required to answer to the allegations contained in Paragraph 30 of the Complaint because the allegations are not directed to JCP. Moreover, JCP lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 30 and, therefore, denies them.

31. JCP is not required to answer to the allegations contained in Paragraph 31 of the Complaint because the allegations are not directed to JCP. Moreover, JCP lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 31 and, therefore, denies them.

32. JCP denies the allegations contained in Paragraph 32 of the Complaint to the extent that the allegations are directed to JCP. Moreover, JCP lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 32 directed at Defendants other than JCP and, therefore, denies them.

33. JCP denies the allegations contained in Paragraph 33 of the Complaint to the extent that the allegations are directed to JCP. Moreover, JCP lacks sufficient knowledge or

information to form a belief as to the truth of the allegations contained in Paragraph 33 directed at Defendants other than JCP and, therefore, denies them.

34. JCP denies the allegations contained in Paragraph 34 of the Complaint to the extent that the allegations are directed to JCP. Moreover, JCP lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 34 directed at Defendants other than JCP and, therefore, denies them.

35. JCP denies the allegations contained in Paragraph 35 of the Complaint to the extent that the allegations are directed to JCP. Moreover, JCP lacks sufficient knowledge or information to form a belief as to the truth of the allegations contained in Paragraph 35 directed at Defendants other than JCP and, therefore, denies them.

PLAINTIFF'S PRAYER FOR RELIEF

36. JCP denies that Plaintiff is entitled to any of its requests for relief against JCP.

DEMAND FOR JURY TRIAL

37. JPC is not required to answer plaintiff's request for a jury trial. JCP also demands a jury trial pursuant to FED. R. CIV. P. 38.

DEFENSES

38. JCP's Defenses are set forth below. JCP undertakes the burden of proof only as to those defenses as required by law regardless of how such defenses are denominated herein. JCP reserved the right to amend its Answer and to add additional Defenses.

FIRST DEFENSE

39. JCP has not and does not directly or indirectly (by inducement, contributory infringement, or otherwise) infringe any of the claims of the '906 Patent or the '985 Patent either literally or under the Doctrine of Equivalents.

SECOND DEFENSE

40. The '906 Patent and the '985 Patent are invalid or void for failing to satisfy the conditions of patentability as set forth in 35 U.S.C. §§100, 101, 102, 103 and/or 112.

THIRD DEFENSE

41. Plaintiff is estopped from construing any valid claim of the '906 Patent or the '985 Patent to be infringed literally or by the Doctrine of Equivalents by any of JCP due to the disclosures of prior art or to the admissions or statements made to the U.S. Patent and Trademark Office during prosecution of the patents in suit or because of the disclosure or language of the specification or claims thereof.

FOURTH DEFENSE

42. Plaintiff is not entitled to recover any damages to the extent that Plaintiff, or any predecessors in interest to the '906 Patent or the '985 Patent, or licensees thereof, failed to properly mark any of their relevant products as required by 35 U.S.C. §287 or otherwise give proper notice that JCP's actions actually infringed the '906 Patent or the '985 Patent. JCP is not liable to Plaintiff for the acts alleged to have been performed before JCP received notice that it was allegedly infringing the '906 Patent and/or the '985 Patent.

FIFTH DEFENSE

43. JCP incorporates its responses as set forth above as though fully set forth herein.

44. To the extent that Plaintiff asserts that JCP indirectly infringes, either by contributory infringement or inducement, JCP is not liable to Plaintiff for the acts alleged to have been performed before JCP knew that its actions would cause the indirect infringement.

SIXTH DEFENSE

45. Plaintiff's claims against JCP are improper to the extent that any allegedly infringing products are directly or indirectly provided to JCP or by JCP to an entity having an express or implied license to the '906 Patent and/or the '985 Patent.

SEVENTH DEFENSE

46. On information and belief, Plaintiff's patent rights with respect to any allegedly infringing products are exhausted by virtue of an express or implied license to the '906 Patent and/or the '985 Patent to one or more third parties.

EIGHTH DEFENSE

47. Plaintiff is not entitled to any injunctive relief as demanded because any injury to Plaintiff is neither immediate or irreparable and Plaintiff has adequate remedies at law.

NINTH DEFENSE

48. The '985 Patent is invalid and/or unenforceable under the doctrine of prosecution laches.

TENTH DEFENSE

49. On information and belief, and subject to further amendments as JCP obtains more information during discovery, the '906 Patent and the '985 Patent are unenforceable as a result of inequitable conduct.

50. Although Eolas alleges in its Complaint that the '906 Patent was duly and legally issued by the United States Patent and Trademark Office after full and fair examination, each and every claim of the '906 Patent is unenforceable due to inequitable conduct before the United States Patent and Trademark Office.

51. Michael D. Doyle ("Doyle") is one of the named inventors of the patents-in-suit, U.S. Patent Nos. 5,838,906 and 7,599,985.

52. The University is the owner and named assignee of the patents-in-suit, U.S. Patent Nos. 5,838,906 and 7,599,985.

53. Charles E. Krueger (“Krueger”) was the patent prosecutor for the patents-in-suit, U.S. Patent Nos. 5,838,906 and 7,599,985.

54. Doyle, as the named inventor, the University, as the owner, and Krueger, as the patent prosecutor, each had a duty of candor and good faith in dealing with the United States Patent and Trademark Office (“the Patent Office”) during prosecution of the ‘906 and ‘985 patents.

55. Krueger’s, the University’s, and Doyle’s duty of candor and good faith also existed during the reexaminations of the ‘906 patent.

56. The duty of candor and good faith owed by Krueger, the University, and Doyle included a duty to disclose to the Patent Office all information known to that individual to be material to patentability as defined in 37 C.F.R. § 1.56.

57. On information and belief, Doyle and the University had a financial incentive to deceive the Patent Office.

58. On information and belief, Doyle had a financial incentive to deceive the Patent Office during prosecution of the ‘906 patent, during the reexaminations of the ‘906 patent, and during the prosecution of the ‘985 patent.

59. On information and belief, Doyle worked at the University of California, San Francisco when he allegedly conceived of the inventions claimed in the ‘906 and ‘985 patents.

60. On information and belief, the ‘906 and ‘985 patents are owned by the University.

61. On information and belief, the University has the right to receive from Eolas a share of any royalties related to the ‘906 and/or ‘985 patents as a result of licensing or enforcement efforts.

62. On information and belief, Doyle and his co-inventors are entitled to receive a portion of any royalties paid to the University related to the ‘906 and/or ‘985 patents.

63. On information and belief, Doyle is a founder of the plaintiff in this action, Eolas.

64. On information and belief, Doyle quit his job to found Eolas, and personally invested time and money in Eolas.

65. On information and belief, Doyle has had a financial interest in Eolas since at least August 21, 1995.

66. On information and belief, on or about August 21, 1995, Eolas acquired rights to the patent application that matured into the '906 patent.

67. On information and belief, Doyle was personally involved in the prosecution of the '906 patent, the reexaminations of the '906 patent, and the prosecution of the '985 patent at the same time that he had a financial interest in Eolas and a financial interest in any royalties on the '906 and/or '985 patents paid to the University.

68. As explained in more detail below, on information and belief, Krueger, the University, and Doyle breached the duty of candor and good faith in dealing with the Patent Office. On information and belief, Krueger, the University, and Doyle failed to disclose material information and made affirmative misrepresentations of material facts. On information and belief, Krueger, the University, and Doyle did so with knowledge of the information withheld, with knowledge of the falsity of the misrepresentations, and with the specific intent to deceive the Patent Office. The circumstances of Krueger's, the University's, and Doyle's actions confirm an intent to deceive the Patent Office.

69. As explained in more detail below, on information and belief, Krueger, the University, and Doyle breached the duty of candor and good faith in dealing with the Patent Office by failing to disclose material information related to the ViolaWWW browser. On information and belief, Krueger, the University, and Doyle did so with knowledge of the information they withheld and with the specific intent to deceive the Patent Office. The circumstances of Krueger's, the University's, and Doyle's actions confirm intent to deceive the Patent Office.

70. As explained in more detail below, on information and belief, the ViolaWWW browser was material to the patentability of all the claims of the '906 patent because it disclosed

limitations that the Patent Office believed were missing in the prior art, including interactivity *embedded within* the webpage (as opposed to a separate window), *automatic* invocation of the interactivity (as opposed to requiring a mouse click to enable the interactivity), and use of a separate executable application (as opposed to a script). On information and belief, Krueger, the University, and Doyle knew that the ViolaWWW browser disclosed these limitations, yet they withheld this information from the Patent Office at the same time that they argued to the Patent Office that these limitations were missing from the prior art.

71. The application for the '906 patent was filed on October 17, 1994.

72. Thus the critical date for purposes of 35 U.S.C. § 102(b) was October 17, 1993. Any printed publication describing the claimed invention, or any public use of the claimed invention in the United States, before October 17, 1993, would be an absolute bar to patentability.

73. On information and belief, Doyle and the University knew before the application for the '906 patent was filed that an individual in Northern California named Pei Wei had developed a browser called "ViolaWWW" before the critical date of October 17, 1993.

74. On information and belief, on May 20, 1994, David Raggett sent an e-mail to Doyle regarding object level embedding in web browsers. In this email, Raggett advised Doyle that he "might want to look at Viola which [Raggett] seem[s] to remember takes advantage of the tk tool kit to provide a certain level of embedding."

75. On information and belief, Raggett further advised Doyle that he could "find a pointer to Viola off the CERN WWW project page."

76. On information and belief, later on the same day, May 20, 1994, David Martin, who was one of Doyle's colleagues at the University of California in San Francisco and who was also named as an inventor on the '906 patent, responded to a posting from Pei Wei on a publicly-accessible e-mail distribution list. On information and belief, Pei Wei's post had included the following statements: "In order to do better testings and support of ViolaWWW, I would like to solicit donations for guest accounts on the major Unix platforms. . . . So, if your organization has

some CPU crunchies to spare, good network connectivity, don't have a firewall, want to help viola development, etc, please drop me a note. Based mostly on network connectivity, I'll select one (maybe two) offer(s) for each different platform.” On information and belief, David Martin’s response to Pei Wei included the following statements: “I am willing to discuss providing accounts on SGI IRIX 5.x, Solaris 2.x, Alpha OSF/1. Please let me know what you require in terms of disk space, compiler, utilities, etc...”

77. On information and belief, by May 20, 1994 — several months before the application for the ‘906 patent was filed — Doyle and the University knew about Pei Wei’s ViolaWWW browser.

78. On information and belief, Doyle and/or the University did not disclose this information to Krueger or Charles J. Kulas (“Kulas”), the patent prosecutor that filed the ‘906 patent application, prior to the filing of the application that lead to the ‘906 patent.

79. On information and belief, Doyle and the University, as Doyle’s employer, learned even more about the ViolaWWW browser before the application for the ‘906 patent was filed.

80. On information and belief, on August 30, 1994, at approximately 11:15 p.m. California time, Doyle posted a “Press Release” to the publicly-accessible VRML e-mail distribution list that included the following statements:

Researchers at the U. of California have created software for embedding interactive program objects within hypermedia documents. Previously, object linking and embedding (OLE) has been employed on single machines or local area networks using MS Windows -TM-. This UC software is the first instance where program objects have been embedded in documents over an open and distributed hypermedia environment such as the World Wide Web on the Internet.

81. On information and belief, on August 31, 1994, at approximately 6:52 p.m. California time, Pei Wei posted a response on the publicly-accessible VRML e-mail distribution

list that included the following statements: “I don’t think this is the first case of program objects embedded in docs and transported over the WWW. ViolaWWW has had this capabilities for months and months now.”

82. On information and belief, Pei Wei’s response included a link to an FTP site where anyone “interested in learning more about how violaWWW does this embedded objects thing can get a paper on it.”

83. On information and belief, the paper cited by Pei Wei was entitled “A Brief Overview of the VIOLA Engine, and its Applications” (“August 1994 Viola Paper”).

84. On information and belief, the paper cited by Pei Wei was dated August 16, 1994 — over two months before the application for the ‘906 patent was filed.

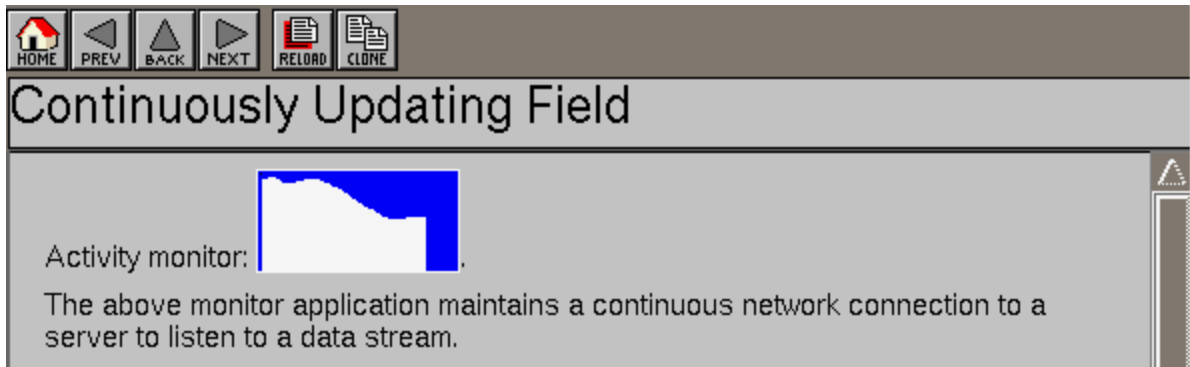

85. On information and belief, the paper cited by Pei Wei included the following statements and graphics:

Embedding mini applications

Viola's language and toolkit allows ViolaWWW to render documents with embedded viola objects. Although the viola language is not part of the World Wide Web standard (yet?), having this capability provides a powerful extension mechanism to the basic HTML.

For example, if the HTML's input-forms do not do exactly what you want, you have the option to build a mini customized input-form application. And it could have special scripts to check for the validity of the entered data before even making a connection to the server.

Or, if your document needs to show data that is continuously updated, you could build a small application such as this which display the CPU load of a machine. Note that only the graph field is continuously updated, but not the rest of the document.

Other possible applications include front-ends to the stock market quotes, new wire updates, tele-video style service, etc.

Here's another example of a mini interactive application that is embedded into a HTML document. It's a chess board in which the chess pieces are actually active and movable. And, illegal moves can be checked and denied straight off by the intelligence of the scripts in the application. Given more work, this chess board application can front-end a chess server, connected to it using the socket facility in viola.

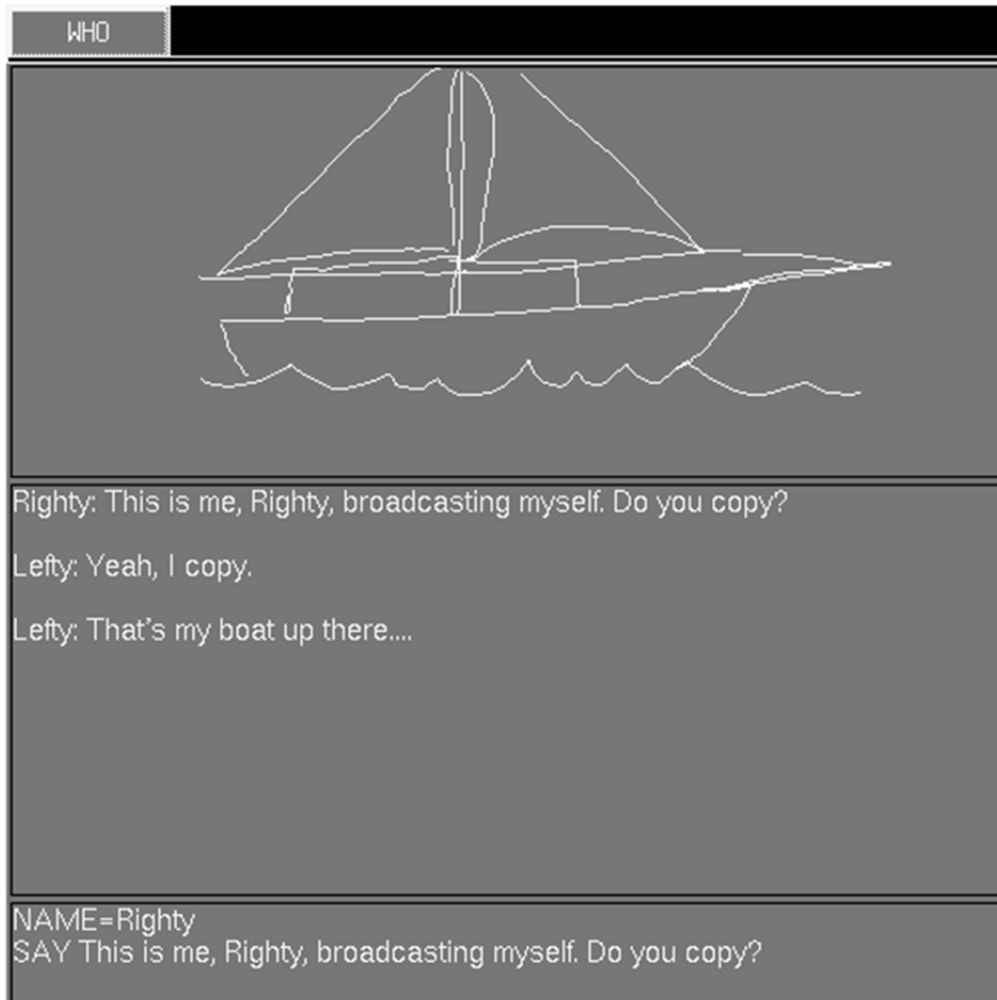

A Chess Board

This is a demo a viola "application" (the chess board) being retrieved via HTTP, instantiated, and plugged into this HTML document.

What follows is a screendump of a demo of an embedded viola application that lets readers of this HTML page communicate by typing or drawing. Like the chess board application above, this chat application can stand-alone (and have nothing to do with the World Wide Web), or be embedded into a HTML document.

By the way, to make this possible, a multi-threaded/persistent server was written to act as a message relay (and to handle HTTP as well).

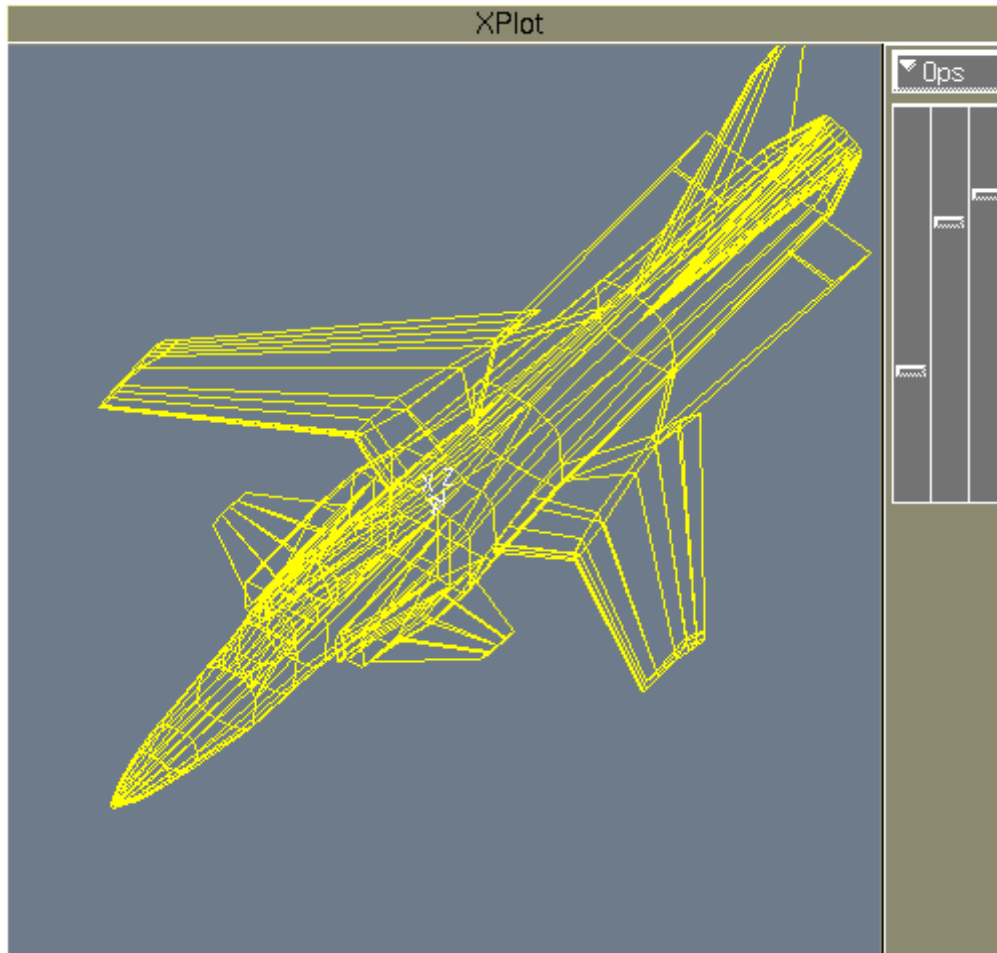

This next mini application front-ends a graphing process (on the same machine as the viola process). An important thing to note is that, like all the other document-embeddable mini applications shown, no special modification to the viola engine is required for ViolaWWW to support them. All the bindings are done via the viola language, provided that the necessary primitives are available in the interpreter, of course.

Put it another way, because of the scripting capability, the ViolaWWW browser has become very flexible, and can take on many new features dynamically. C-code patches and re-compilation of the browser can frequently be avoided.

This attribute can be very important for several reasons. It keeps the size of the core software small, yet can grow dynamically as less frequently used features are occasionally used, or as new accessories/components are added.

Such new accessories can be as simple as little applets that accompany documents, or conceivably as complicated as a news or mail reader. An analogy is how Emacs's programming environment allows that text editor to become much more than just a text editor.

Not only can mini applications be embedded inside of documents, they can even be plugged into the ViolaWWW's "toolbar".

The following picture shows a "bookmark tool" that acts as a mini table of contents for the page. In this case, the bookmark is linked to the document (by using the <LINK> tag of HTML 3.0), and the bookmark will appear and disappear with the document.

One can imagine many plug-in accessories/applets/tools possible with this facility. Like, a self guiding slideshow tool. Or, document set specific navigational tools/icons that are not pasted onto the page so that the navigational icons don't scroll away from view. Etc.

86. On information and belief, “Doyle downloaded and read the paper.” 399 F.3d 1325, 1330 (Fed. Cir. 2005).

87. On information and belief, on August 31, 1994, at approximately 9:06 p.m. California time, Doyle responded to Pei Wei’s statement at approximately 6:52 p.m. that “I don’t think this is the first case of program objects embedded in docs and transported over the WWW. ViolaWWW has had this capabilities for months and months now.” Doyle responded by asking Pei Wei, “How many months and months? We demonstrated our technology in 1993.”

88. On information and belief, on August 31, 1994, at approximately 11:16 p.m. California time, Pei Wei responded to the message that Doyle had sent at approximately 9:06 p.m. Pei Wei’s response included the following statements:

Definitely by May 8, 1993 we had demonstrated that plotting demo (the very one shown in the viola paper) to visitors from a certain computer manufacturer... This demo was memorable because someone and I at ORA had lost sleep the night before the meeting, in order to cook up that particular plotting demo :) We had to show something cool.

That demo wasn't very hard to do because by that time the basic capability was already in place for violaWWW to fetch viola objects over HTTP (or whatever) and plug them into documents. Of course, our wire-frame plotting demo isn't anywhere as

comprehensive as yours. But, the point was that there was a way to embed programmable & interactive objects into HTML documents.

89. On information and belief, when Pei Wei referred to the “plotting demo (the very one shown in the viola paper),” he was referring to the plot of the fighter jet shown above in the window titled “XPlot.”

90. On information and belief, when Pei Wei referred to a demonstration “by May 8, 1993” to “visitors from a certain computer manufacturer,” he was referring to a demonstration of the plotting demo to Karl Jacob and James Kempf from Sun Microsystems on May 7, 1993. This demonstration took place in Northern California. There was no limitation, restriction or obligation of secrecy on Karl Jacob or James Kempf.

91. The Federal Circuit has held that “Wei’s May 7, 1993 demonstration to two Sun Microsystems employees without confidentiality agreements was a public use under [35 U.S.C. § 102(b)].” 399 F.3d 1325, 1335 (Fed. Cir. 2005).

92. On information and belief, on August 31, 1994, at approximately 11:13 p.m. California time, Doyle responded again to the message that Pei Wei had sent at approximately 6:52 p.m.

93. On information and belief, Doyle’s response was sent after Doyle had read Pei Wei’s August 1994 Viola paper.

94. On information and belief, Doyle’s response included the following statements: “Pei is mistaken on two counts, as I describe below As Pei’s paper on Viola states, that package did not support what it calls ‘embeddable program objects’ until 1994. . . . Furthermore, Viola merely implements an internal scripting language”

95. On information and belief, on August 31, 1994, at approximately 11:36 p.m. California time, Doyle responded to the message that Pei Wei had sent at approximately 11:16 p.m. Doyle’s response included the following statements: “Out of curiosity, did you publicly demonstrate this or publish any results before 1994?”

96. On information and belief, on September 1, 1994, at approximately 12:08 a.m. California time, Pei Wei responded to the message that Doyle had sent at approximately 11:13 p.m.

97. On information and belief, Pei Wei's message at approximately 12:08 a.m. was also responsive to the message that Doyle had sent at approximately 11:36 p.m.

98. On information and belief, Pei Wei's message to Doyle at 12:08 a.m. included the following statements:

Well. Viola's model was *demonstrated* in 1993, *released* freely in 1994. . . . And, as for the plotting demo, it actually is really just a front-end that fires up a back-end plotting program (and the point is that that back-end could very well be running on a remote super computer instead of the localhost). For that demo, there is a simple protocol such that the front-end app could pass an X window ID to the back-end, and the back-end draws the graphics directly onto the window violaWWW has opened for it.

99. On information and belief, Doyle deleted from his computer his emails with Pei Wei on August 31 and September 1, 1994, and the copy of the August 1994 Viola paper that he had downloaded and read. Doyle kept on his computer other emails from that timeframe, however.

100. On information and belief, Doyle, as Director of the University's Center for Knowledge Management, was living in Northern California on August 31, 1994, when he exchanged messages with Pei Wei about the ViolaWWW browser.

101. On information and belief, Pei Wei was living in Northern California on August 31, 1994, when he exchanged messages with Doyle about the ViolaWWW browser.

102. On information and belief, there was no limitation, restriction or obligation of secrecy on the recipients of Pei Wei's messages on August 31 and September 1, 1994, about the ViolaWWW browser.

103. On information and belief, there was no limitation, restriction or obligation of secrecy on the readers of Pei Wei's August 1994 Viola paper.

104. On October 17, 1994, the application for the '906 patent was filed. Doyle and Martin were among those named as inventors.

105. The application for the '906 patent discloses the Mosaic browser and the Cello browser, but not the ViolaWWW browser.

106. The application for the '906 patent included an information disclosure statement that identified several pieces of prior art, but not the ViolaWWW browser. Indeed, although known by the University and Doyle, the information disclosure statement wholly failed to mention any work of Pei Wei, the Viola WWW browser, the prior publication demonstrations of the ViolaWWW browser, or Doyle's knowledge that Pei Wei was the prior inventor of the invention claimed by the application for the '906 patent. Again, rather than candidly providing full disclosure, the University and Doyle failed to disclose the work of the University's own student in order to advance their own financial interests in attempting to obtain a patent.

107. On November 22, 1994, Doyle signed a declaration under penalty of perjury that included the following statements: "I believe I am . . . an original, first and joint inventor . . . of the subject matter which is claimed and for which a patent is sought . . . the specification of which . . . was filed on October 17, 1994 as Application Serial No. 08/324,443. . . . I acknowledge the duty to disclose information which is material to the examination of this application in accordance with Title 37, Code of Federal Regulations, Section 1.56."

108. On information and belief, no disclosure about the ViolaWWW browser was ever provided to the Patent Office during prosecution of application number 08/324,443, which matured into the '906 patent.

109. On information and belief, Doyle was reminded about Pei Wei and the ViolaWWW browser in 1995, during prosecution of the '906 patent, but still no disclosure about the ViolaWWW browser was provided to the Patent Office.

110. On information and belief, on August 21, 1995, at approximately 11:42 a.m. California time, Doyle posted a “Press Release” to the publicly-accessible WWW-talk e-mail distribution list. Doyle’s post included the following statements: “Eolas Technologies Inc. announced today that it has completed a licensing agreement with the University of California for the exclusive rights to a pending patent covering the use of embedded program objects, or ‘applets,’ within World Wide Web documents.”

111. On information and belief, on August 21, 1995, at approximately 12:54 p.m. California time, Pei Wei responded on the publicly-accessible WWW-talk e-mail distribution list to Doyle’s “Press Release.” Pei Wei’s response included the following statements: “[F]or the record, I just want to point out that the ‘technology which enabled Web documents to contain fully-interactive “inline” program objects’ was existing in ViolaWWW and was *released* to the public, and in full source code form, even back in 1993... Actual conceptualization and existence occurred before ‘93.”

112. On information and belief, on August 21, 1995, at approximately 1:14 p.m. California time, Doyle responded to the message Pei Wei had sent at approximately 12:54 p.m. Doyle’s response included the following statements: “We’ve had this discussion before (last September, remember?). You admitted then that you did NOT release or publish anything like this before the Eolas demonstrations.”

113. On information and belief, on August 21, 1995, at approximately 4:09 p.m. California time, Pei Wei responded to the message that Doyle had sent at approximately 1:14 p.m. Pei Wei’s response included the following statements:

Please carefully re-read my letter to you... I said Viola was demonstrated in smaller settings, but before your demo. The applets stuff was demo’ed to whomever wanted to see it and had visited our office at O’Reilly & Associates (where I worked at the time).

This is what I wrote on the VRML list:

....

- > Definitely by May 8, 1993 we had demonstrated that plotting demo
- > (the very one shown in the viola paper) to visitors from a certain
- > computer manufacturer... This demo was memorable because someone and I
- > at ORA had lost sleep the night before the meeting, in order to cook up
- > that particular plotting demo :) We had to show something cool.

That date (May 93), at least, predates your demo if I'm not mistaken. Then around August 93, it was shown to a bunch of attendees at the first Web Conference in Cambridge. . . .

....

If you're talking about interactive apps *specifically* on the web, ie applets in-lined into HTML documents etc., and with bi-directional communications, then look at ViolaWWW as it existed around late '92 early '93.

114. On information and belief, when Pei Wei referred to the “plotting demo (the very one shown in the viola paper),” he was referring to the plot of the fighter jet shown above in the window titled “XPlot.”

115. On information and belief, when Pei Wei referred to a demonstration “by May 8, 1993,” he was referring to the demonstration of the plotting demo to two Sun Microsystems employees that the Federal Circuit has held “was a public use under [35 U.S.C. § 102(b)].” 399 F.3d 1325, 1335 (Fed. Cir. 2005).

116. On information and belief, when Pei Wei referred to the “first Web Conference in Cambridge” “around August 1993,” he was referring to the “World-Wide Web Wizards Workshop” held in Cambridge, Massachusetts on July 28–30, 1993.

117. On information and belief, people attending the Wizards workshop included Tim Berners-Lee, Marc Andreessen, Eric Bina, Dale Dougherty, Scott Silvey, and Pei Wei.

118. On information and belief, Tim Berners-Lee and Dale Dougherty were the organizers of the Wizards workshop.

119. On information and belief, Dale Dougherty worked at O'Reilly & Associates in Northern California.

120. On information and belief, in 1992, Dale Dougherty learned about Viola and recruited Pei Wei to join O'Reilly & Associates. Pei Wei's job at O'Reilly & Associates was to continue developing the ViolaWWW browser.

121. On information and belief, Scott Silvey worked with Pei Wei at O'Reilly & Associates in Northern California.

122. On information and belief, when Pei Wei wrote "This demo was memorable because someone and I at ORA had lost sleep the night before the meeting, in order to cook up that particular plotting demo," the other person he was referring to was Scott Silvey.

123. On information and belief, Tim Berners-Lee is the person generally attributed to be the inventor of the World Wide Web.

124. On information and belief, Marc Andreessen and Eric Bina were the authors of Mosaic, a popular browser for the World Wide Web created at the National Center for Supercomputing Applications (NCSA) at the University of Illinois at Urbana-Champaign.

125. On information and belief, Marc Andreessen and Eric Bina went on to found Netscape, the manufacturer of another popular browser for the World Wide Web.

126. On information and belief, Pei Wei and Scott Silvey demonstrated the ViolaWWW browser and its ability to automatically invoke interactive objects embedded within a webpage using the "VOBJF" tag to at least Marc Andreessen and Tim Berners-Lee at the Wizards workshop in Cambridge, Massachusetts in July 1993 — over one year before the application for the '906 patent was filed.

127. On information and belief, there was no limitation, restriction or obligation of secrecy on anyone at the Wizards workshop.

128. On information and belief, Pei Wei's demonstration at the Wizards workshop of the ViolaWWW browser and its ability to automatically invoke interactive objects embedded within a webpage using the "VOBJF" tag was a public use under 35 U.S.C. § 102(b).

129. On information and belief, despite Pei Wei's communications to Doyle repeatedly providing evidence that the ViolaWWW browser was material prior art under 35 U.S.C. § 102(b), Doyle never disclosed the ViolaWWW browser to the Patent Office during prosecution of application number 08/324,443, which matured into the '906 patent.

130. Indeed, Chris McRae, a University employee for the Center for Knowledge Management at the San Francisco campus attended the Wizards workshop in July 1993. After the workshop, McRae returned to the University and told the University's Assistant Director, David Martin, about the ViolaWWW browser and its capabilities. Although the University's management knew of the ViolaWWW browser, still it failed to advise the PTO of the ViolaWWW browser, the public demonstrations, or the prior Pei Wei inventorship of the invention claimed by the application for the '906 patent.

131. On information and belief, Doyle instead deleted from his computer his emails with Pei Wei on August 21, 1995. Doyle kept on his computer other emails from that timeframe, however.

132. On information and belief, in 1998, during prosecution of the '906 patent, Doyle collected additional information about the ViolaWWW browser, but he still did not disclose any information about the ViolaWWW browser to the Patent Office, as explained in more detail below.

133. On information and belief, during prosecution of the '906 patent, Doyle maintained a folder called "Viola stuff."

134. On information and belief, the "Viola stuff" folder included a printout of Pei Wei's message to Doyle on August 31, 1994, at approximately 6:52 p.m. California time, in which Pei Wei told Doyle, "I don't think this is the first case of program objects embedded in docs and transported over the WWW. ViolaWWW has had this capabilities for months and months now."

135. On information and belief, the "Viola stuff" folder included a printout of Doyle's message to Pei Wei on August 31, 1994, at approximately 11:36 p.m. California time, in which

Doyle asked Pei Wei, “Out of curiosity, did you publicly demonstrate this or publish any results before 1994?”

136. On information and belief, the “Viola stuff” folder included a printout from the URL <<http://www.w3.org/History/1994/WWW/WorkingNotes/>>. This webpage has a heading for the “WWWizardsWorkshop” “Cambridge, Mass, July 1993” and includes links to “Announcement,” “Agenda,” and “Photos of attendees.”

137. On information and belief, “WWWizardsWorkshop” refers to the World-Wide Web Wizards Workshop held in Cambridge, Massachusetts on July 28–30, 1993, that Pei Wei attended.

138. On information and belief, the “Announcement” link links to a webpage at <http://www.w3.org/History/1994/WWW/WorkingNotes/1993_Workshop/Announcement.html> that states that “Interactive objects” would be discussed at the Wizards workshop.

139. On information and belief, the “Agenda” link links to a webpage at <http://www.w3.org/History/1994/WWW/WorkingNotes/1993_Workshop/Agenda.html> that states that “Interactive objects” was on the agenda for discussion at the Wizards workshop.

140. On information and belief, the webpages for the Wizards workshop corroborate Pei Wei’s statement to Doyle on August 21, 1995, that the plotting demo described in the August 1994 Viola paper was “shown to a bunch of attendees at the first Web Conference in Cambridge” “around August 93” — over one year before the application for the ‘906 patent was filed.

141. On information and belief, the “Viola stuff” folder included a printout of a webpage with a link to the source code for viola-2.1.2, archived on September 2, 1993 — over one year before the application for the ‘906 patent was filed.

142. On information and belief, the “Viola stuff” folder included a printout of a webpage with the “README” file for viola-2.1.2. The date at the top of the “README” file is July 27, 1992. The “README” file includes instructions for building the binary code for the “viola” program, and instructions for running the ViolaWWW browser. The “README” file states at the bottom:

Comments and questions:

Please send WWW specific bugs to www-bugs@info.cern.ch,
general comments to www-talk@info.cern.ch, and anything to
wei@xcf.Berkeley.EDU.

Pei Y. Wei
wei@xcf.berkeley.edu

143. On information and belief, the “Viola stuff” folder included a printout of a message that Pei Wei had sent to the publicly-accessible WWW-talk e-mail distribution list on January 28, 1994, that included the following statements: “Right now, the ViolaWWW that is under development can embed viola objects/applications inside of HTML documents.”

144. On information and belief, the “Viola stuff” folder included a printout of a message that Pei Wei had sent to the publicly-accessible WWW-talk e-mail distribution list on February 25, 1994, that included the following statements:

The new ViolaWWW is now available for ftp'ing. It's beta and feedback is very welcomed. The README file follows...

```
=====
ViolaWWW, Version 3.0 Beta                               Feb 23 1994
=====
```

ViolaWWW is an extensible World Wide Web hypermedia browser for XWindows.

....

Notable features in the new ViolaWWW

....

* Embeddable in-document and in-toolbar programmable viola objects. A document can embed mini viola applications (ie: a chess board), or can cause mini apps to be placed in the toolbar.

....

Availability

Source and binary can be found in <ftp://ora.com/pub/www/viola>.
Sparc binary is supplied.

....

Pei Y. Wei (wei@ora.com)
O'Reilly & Associates, Inc.

145. The "Viola stuff" folder included a printout from the URL
<<http://xcf.berkeley.edu/ht/projects/viola/>>. The printout included the following statements:

ViolaWWW, Version 3.1 Beta

Mar 23 1994

=====

ViolaWWW is an extensible World Wide Web hypermedia
browser for XWindows.

....

Notable features in the new ViolaWWW

....

* Embeddable in-document and in-toolbar programmable viola
objects. A document can embed mini viola applications (ie: a
chess board), or can cause mini apps to be placed in the toolbar.

....

Availability

Sparc binary is supplied.

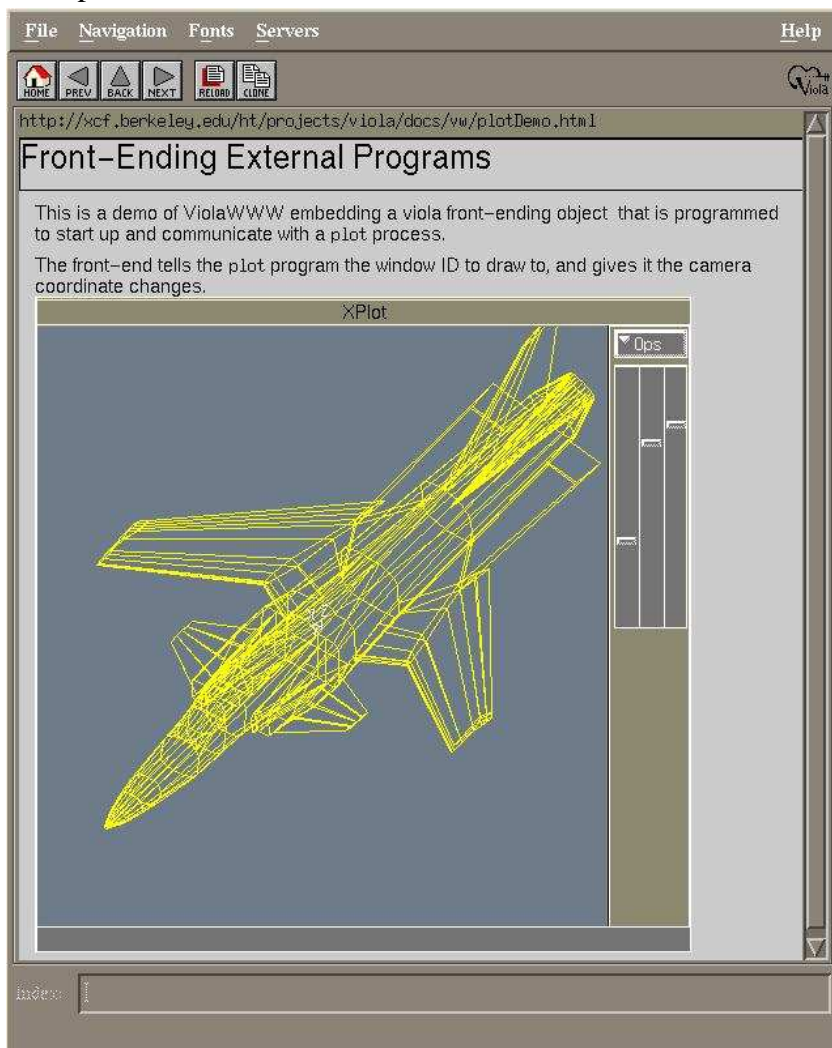

....

Pei Y. Wei (wei@ora.com)
O'Reilly & Associates, Inc.

146. On information and belief, the “Viola stuff” folder included a printout from the URL <<http://xcf.berkeley.edu/ht/projects/viola/docs/viola/>>. One of the files listed in the printout is named “plotDemo.html”.

147. On information and belief, the “Viola stuff” folder included a printout from the URL <<http://xcf.berkeley.edu/ht/projects/viola/docs/objs/>>. One of the files listed in the printout is named “plot.v”.

148. On information and belief, the following is a screenshot of the ViolaWWW browser after parsing the file plotDemo.html:

149. On information and belief, the files plotDemo.html and plot.v include code for the plotting demo described in the August 1994 Viola paper.

150. On information and belief, the file plotDemo.html specifies the location of the file plot.v, which in turn specifies the location of a separate executable application named vplot.

151. On information and belief, Pei Wei had told Doyle on August 31, 1994 how the plotting demo worked: “[A]s for the plotting demo, it actually is really just a front-end that fires up a back-end plotting program (and the point is that that back-end could very well be running on a remote super computer instead of the localhost). For that demo, there is a simple protocol such that the front-end app could pass an X window ID to the back-end, and the back-end draws the graphics directly onto the window violaWWW has opened for it.”

152. On information and belief, Pei Wei had told Doyle on August 31, 1994, and again on August 21, 1995 that the plotting demo described in the August 1994 Viola paper was the “very one” demonstrated “to visitors from a certain computer manufacturer” by May 8, 1993.

153. On information and belief, when Pei Wei referred to a demonstration “by May 8, 1993,” he was referring to the demonstration of the plotting demo to two Sun Microsystems employees that the Federal Circuit has held “was a public use under [35 U.S.C. § 102(b)].” 399 F.3d 1325, 1335 (Fed. Cir. 2005).

154. On information and belief, during prosecution of the ‘906 patent, Doyle knew about Pei Wei’s demonstration of the plotting demo that the Federal Circuit has held was a “public use” under 35 U.S.C. § 102(b); Doyle knew how the plotting demo worked; and Doyle had access to the code for that plotting demo.

155. On information and belief, during prosecution of the ‘906 patent, Doyle printed webpages containing information about a talk that Pei Wei gave at Stanford University in Northern California in September 1994.

156. On information and belief, the webpages that Doyle printed included the following statements and graphic:

WWW Browsers: Extensibility Issues

Pei Wei, O’Reilly & Associates

Stanford Computer Forum WWW Workshop - September 20-21, 1994

....

Extensibility in WWW Browsers

The WorldWideWeb is a powerful medium which has many applications beyond just publishing static documents. It is certainly an interface to the space of “documents.” But already, with established features such as input-forms and server-side scripting, we see that the web is also increasingly becoming an interface to the space of what is traditionally called “applications.”

....

In this talk I’ll describe a few possible approaches for a browser to gain more flexibility, and to briefly describe one particular approach as implemented by a system known as ViolaWWW.

....

Possible Ways to Extend Browsers

We already do “extend” browsers with things like “external viewers.” But there’s not a very good integration with the browser. Ideally those external viewers should be rendering in-place inside the document, and be working together with the browser, be tightly integrated with the browser and other parts...

....

Work at O’Reilly & Associates: VIOLA-WWW

....

This is the Viola system that is being developed at O’Reilly and Associates. This system has the following interesting characteristics:

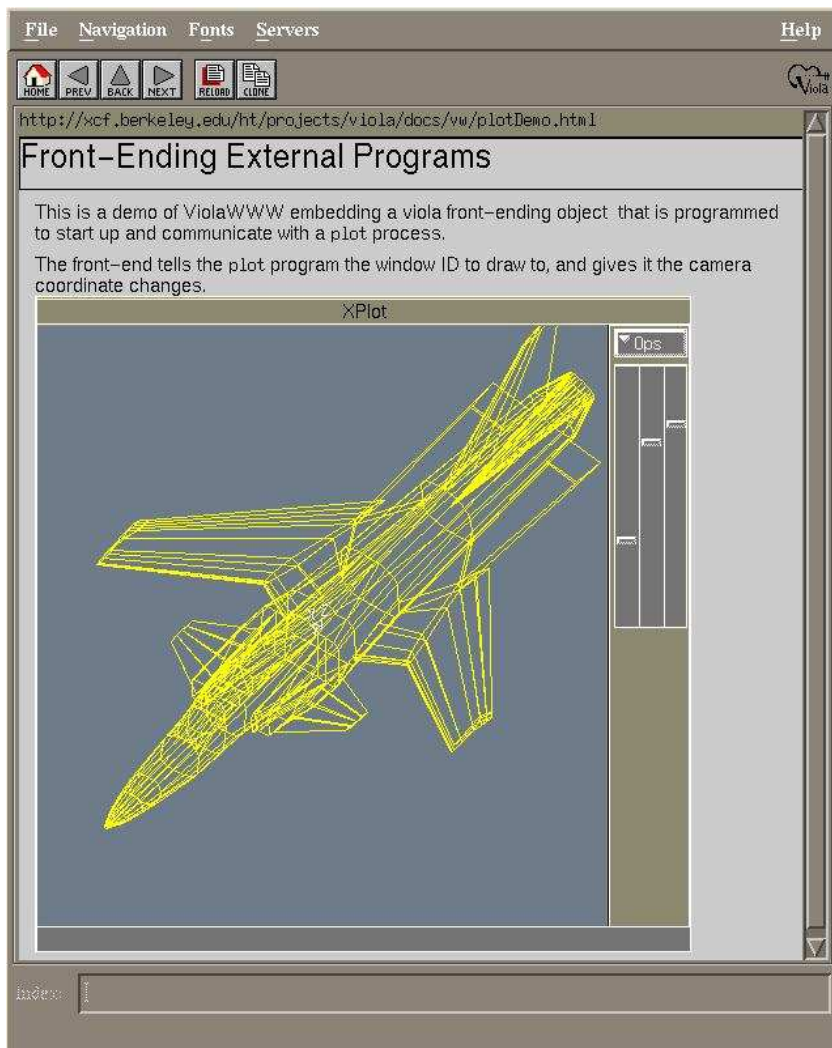

....

Three, program objects can be embedded into documents and the toolbar. . . .

....

The next example is a front-end application to a backend. And the back-end is what actually does the computation and the drawing.

.....

157. On information and belief, there was no limitation, restriction or obligation of secrecy on anyone attending the talk that Pei Wei gave at Stanford University in September 1994.

158. On information and belief, the plotting demo described in the talk at Stanford University in September 1994 is the same plotting demo described in the August 1994 Viola paper.

159. On information and belief, Pei Wei had told Doyle on August 31, 1994, and again on August 21, 1995 that the plotting demo described in the August 1994 Viola paper was the “very one” demonstrated “to visitors from a certain computer manufacturer” by May 8, 1993.

160. On information and belief, when Pei Wei referred to a demonstration “by May 8, 1993,” he was referring to the demonstration of the plotting demo to two Sun Microsystems employees that the Federal Circuit has held “was a public use under [35 U.S.C. § 102(b)].” 399 F.3d 1325, 1335 (Fed. Cir. 2005).

161. On information and belief, during prosecution of the ‘906 patent, Doyle was repeatedly confronted with evidence that the ViolaWWW browser was material prior art under 35 U.S.C. § 102(b), yet Doyle never disclosed the ViolaWWW browser to the Patent Office during prosecution of application number 08/324,443, which matured into the ‘906 patent.

162. On information and belief, the ViolaWWW browser, including the August 1994 Viola paper, was disclosed to Krueger in August of 1998, after the Notice of Allowance for the ‘906 patent issued but before the ‘906 patent issued, when he received a fax containing a number of references regarding the ViolaWWW browser.

163. On information and belief, the fax sent to Krueger in August of 1998 was to allow him to analyze whether the ViolaWWW browser, including the August 1994 Viola paper, should be submitted to the Patent Office.

164. On information and belief, Krueger was aware of Pei Wei’s May 1993 demonstration of the ViolaWWW browser to Sun Microsystems employees without a confidentiality agreement.

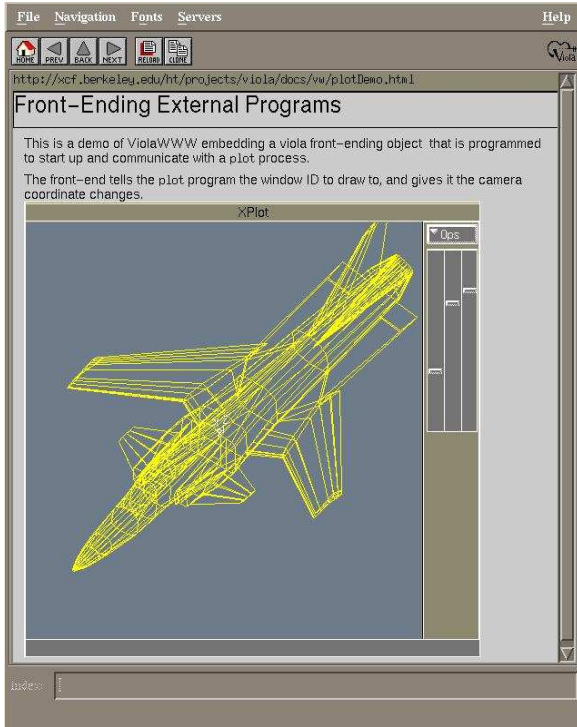

165. On information and belief, Krueger considered Pei Wei’s statements regarding the May 1993 demonstration of the ViolaWWW browser to Sun Microsystems employees when he analyzed whether to disclose the ViolaWWW browser to the Patent Office.

166. On information and belief, Krueger had no reason to disbelieve Pei Wei’s statements regarding the May 1993 demonstration of the ViolaWWW browser to Sun Microsystems employees.

167. On information and belief, Krueger made the determination, prior to the issuance of the ‘906 patent, to not disclose to the PTO the information he received regarding the ViolaWWW browser.

168. On information and belief, the ViolaWWW browser was material to the patentability of the claimed inventions in the '906 patent.

169. On information and belief, there is a remarkable similarity between the ViolaWWW browser and the preferred embodiment of the '906 patent:

ViolaWWW

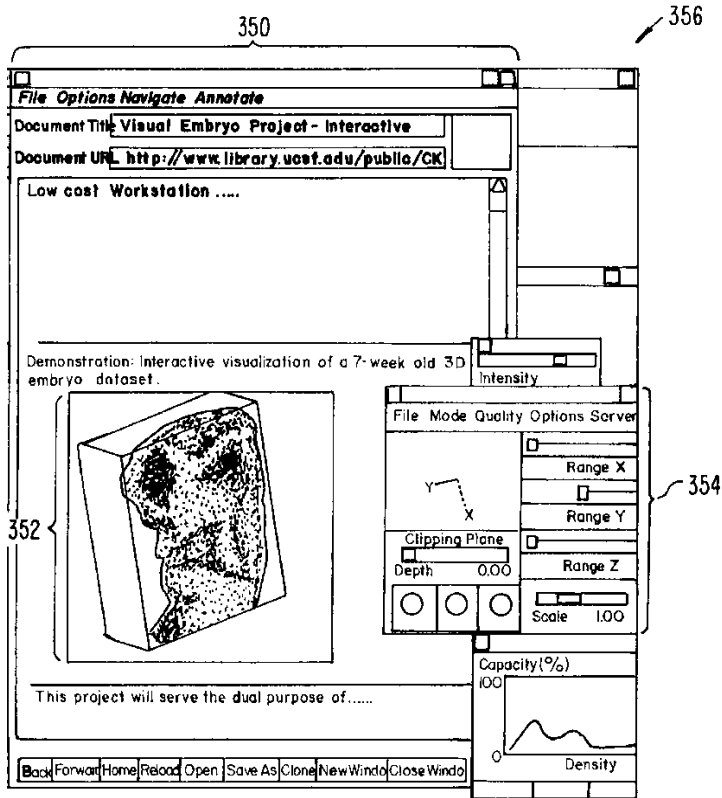

Fig. 9 of U.S. Patent No. 5,838,906

Both the ViolaWWW browser (on the left) and the preferred embodiment of the '906 patent (on the right) enabled a user to interact with a 3-dimensional image embedded in the middle of a webpage. In the ViolaWWW screenshot above, there are three slide controls to the right of the embedded image that move up and down; these rotate the embedded image on the X, Y, and Z axes. Similarly, in the preferred embodiment of the '906 patent shown above, box 354 has three slide controls to the right of the embedded image that rotate the image on the X, Y, and Z axes. Thus, ViolaWWW, like the '906 patent, teaches a browser capable of displaying embedded interactive objects.

170. The Manual of Patent Examining Procedure in force at the time the application for the '906 patent was filed included the following statements:

Materiality is defined in 37 CFR 1.56(b) and discussed herein at MPEP § 2001.05. In addition to prior art such as patents and publications, 37 CFR 1.56 includes, for example, information on **possible prior public uses**, sales, offers to sell, derived knowledge, **prior invention by another**, inventorship conflicts, and the like. [emphasis in bold added]

171. The Manual of Patent Examining Procedure in force today contains similar language:

Materiality is defined in 37 CFR 1.56(b) and discussed herein at MPEP § 2001.05. In addition to prior art such as patents and publications, 37 CFR 1.56 includes, for example, information on >enablement,< **possible prior public uses**, sales, offers to sell, derived knowledge, **prior invention by another**, inventorship conflicts, and the like. >“Materiality is not limited to prior art but embraces *any* information that a reasonable examiner would be substantially likely to consider important in deciding whether to allow an application to issue as a patent.” *Bristol-Myers Squibb Co. v. Rhone-Poulenc Rorer, Inc.*, 326 F.3d 1226, 1234, 66 USPQ2d 1481, 1486 (Fed. Cir. 2003) (emphasis in original) (finding article which was not prior art to be material to enablement issue).< [emphasis in bold added]

172. The Federal Circuit has confirmed that the ViolaWWW browser was material to the patentability of the claimed inventions in the '906 patent.

173. The Federal Circuit held that a reasonable jury could find at least claims 1 and 6 of the '906 patent anticipated by the ViolaWWW browser under 35 U.S.C. § 102(a), (b), and/or (g). *See* 399 F.3d 1325, 1329, 1332–35 (Fed. Cir. 2005).

174. The Federal Circuit held that “Wei’s May 7, 1993 demonstration to two Sun Microsystems employees without confidentiality agreements was a public use under [35 U.S.C. § 102(b)].” 399 F.3d 1325, 1335 (Fed. Cir. 2005).

175. The Federal Circuit held that a reasonable jury could find at least claims 1 and 6 of the '906 patent obvious in light of the ViolaWWW browser. *See* 399 F.3d 1325, 1335 (Fed. Cir. 2005).

176. The Federal Circuit held that a district court could find that Doyle had committed inequitable conduct by failing to disclose the ViolaWWW browser to the Patent Office. *See* 399 F.3d 1325, 1336 (Fed. Cir. 2005).

177. On information and belief, Krueger was aware that the Federal Circuit confirmed that the ViolaWWW browser was material to the patentability of the claimed invention in the '906 patent, but he still did not discuss the ViolaWWW browser further with Doyle.

178. On information and belief, even after Krueger was aware that the Federal Circuit confirmed that the ViolaWWW browser was material to the patentability of the claimed invention in the '906 patent he did not disclose any additional information to help the Patent Office consider ViolaWWW browser.

179. The Patent Office has also confirmed that the ViolaWWW browser was material to the patentability of the claimed inventions in the '906 patent.

180. On or about July 30, 2007, during the 2005 reexamination of the '906 patent, the Patent Office rejected all claims of the '906 patent as being anticipated by DX95, which includes a copy of the text found in Pei Wei’s August 1994 Viola paper.

181. On information and belief, Pei Wei had told Doyle on August 31, 1994, about the August 1994 Viola paper and Doyle had downloaded and read that paper the same day, yet

Doyle never disclosed the Viola paper to the Patent Office during the original examination of the '906 patent.

182. On information and belief, the fact that Doyle may have conceived of the inventions claimed in the '906 patent before August 16, 1994, does not render the August 1994 Viola paper immaterial, because the Viola paper describes features of the ViolaWWW browser that existed before the invention date for the '906 patent and/or over one year before the application for the '906 patent was filed.

183. On information and belief, the plotting demo described in the August 1994 Viola paper was part of the ViolaWWW browser software that was demonstrated to Sun Microsystems on May 7, 1993 — over one year before the application for the '906 patent was filed.

184. On information and belief, none of the claimed inventions in the '906 patent was conceived before August 1993.

185. On information and belief, the ViolaWWW browser software that was described in the August 1994 Viola paper and demonstrated to Sun Microsystems on May 7, 1993, also corroborates anticipation of the claimed inventions in the '906 patent under 35 U.S.C. § 102(g).

186. Neither reexamination of the '906 patent considered whether the claimed inventions were anticipated by “Wei’s May 7, 1993 demonstration to two Sun Microsystems employees without confidentiality agreements” which the Federal Circuit has held was a “public use under [35 U.S.C. § 102(b)].” 399 F.3d 1325, 1335 (Fed. Cir. 2005).

187. In an *ex parte* reexamination, “[r]ejections will not be based on matters other than patents or printed publications, such as public use.” *See* Manual of Patent Examining Procedure (MPEP) § 2258(I).

188. On information and belief, Krueger knew that the Patent Office could not consider public use art during an *ex parte* reexamination.

189. The Patent Office had the authority during the original examination of the '906 patent to issue a rejection based on the “public use” provision of 35 U.S.C. § 102(b), but Doyle and Krueger never disclosed to the Patent Office during that examination the evidence they had

in their possession that the ViolaWWW browser was in “public use” more than one year before the application for the ‘906 patent was filed.

190. On information and belief, the Patent Office would not have allowed the claims of the ‘906 patent if Doyle, the University, or Krueger had not engaged in inequitable conduct and instead had fulfilled their duty of candor and good faith in dealing with the Patent Office.

191. During prosecution of application number 08/324,443, which matured into the ‘906 patent, Doyle, the University, and Krueger withheld extensive evidence about the ViolaWWW browser.

192. On information and belief, Doyle and the University failed to disclose the following material information: the message from Raggett about the ViolaWWW browser and embedded objects; the communications with Pei Wei in 1994 about the ViolaWWW browser and the embedded interactive plotting demo that was in public use in May 1993; the August 1994 Viola paper describing the ViolaWWW browser and the embedded interactive plotting demo that was in public use in May 1993; the communications with Pei Wei in 1995 about the ViolaWWW browser and the embedded interactive plotting demo that was in public use in May 1993 and again at the Wizards conference in July 1993; the contents of the “Viola stuff” folder that Doyle maintained, which included information about the Wizards conference in July 1993 and links to the ViolaWWW browser software, including source code for the embedded interactive plotting demo that was in public use in May 1993; and Pei Wei’s talk at Stanford in September 1994 about the embedded interactive plotting demo that was in public use in May 1993.

193. On information and belief, Krueger failed to disclose a number of material references regarding the ViolaWWW browser including at least the August 1994 Viola paper, Doyle’s communications with Pei Wei in 1994 about the ViolaWWW browser and the embedded interactive plotting demo that was in public use in May 1993; the Viola paper describing the ViolaWWW browser and the embedded interactive plotting demo that was in public use in May 1993; and the contents of the “Viola stuff” folder that Doyle maintained and was faxed to Krueger in August of 1998, which included information about the Wizards

conference in July 1993 and links to the ViolaWWW browser software, including source code for the embedded interactive plotting demo that was in public use in May 1993.

194. On information and belief, the University failed to disclose the following material information: ViolaWWW code written on computers in the XCF lab and posted to the University's FTP sites, the message between David Martin and Pei Wei in May 1994 about ViolaWWW, the ViolaWWW browser including at least the August 1994 Viola paper the prior public demonstrations of the ViolaWWW browser; and the emails asserting that Pei Wei was the prior inventor of the invention claimed by the application for the '906 patent.

195. On information and belief, Doyle, the University, and Krueger withheld information about the ViolaWWW browser with the specific intent to deceive the Patent Office.

196. On information and belief, Doyle had a financial interest in the patentability of the claimed inventions in the '906 patent.

197. On information and belief, the ViolaWWW browser threatened the patentability of the claimed inventions in the '906 patent, and thus threatened Doyle's financial interests.

198. On information and belief, Doyle was personally involved in the prosecution of application number 08/324,443, which matured into the '906 patent.

199. For example, Doyle signed a declaration on or about November 22, 1994, stating that he was an inventor and acknowledging his duty of candor and good faith in dealing with the Patent Office.

200. On or about January 2, 1997, Doyle signed a declaration that was submitted to the Patent Office in an effort to establish an earlier date of invention for the claims of the '906 patent application.

201. On or about February 24, 1997, Doyle and Krueger participated in an examiner interview in an effort to secure allowance of the claims of the '906 patent application.

202. On or about May 27, 1997, Doyle signed a 28-page declaration (including an appendix) that was submitted to the Patent Office in an effort to establish himself as an "expert"

in the subject matter of the claimed invention and to overcome various obviousness rejections to the claims of the '906 patent application.

203. On or about October 29, 1997, Doyle signed another declaration that was submitted to the Patent Office in an effort to establish an earlier date of invention for the claims of the '906 patent application.

204. On or about November 6, 1997, Doyle and Krueger participated in another examiner interview in an effort to secure allowance of the claims of the '906 patent application.

205. On information and belief, the Krueger lacked a technical degree in computer science or electrical engineering, and thus he relied on Doyle to understand and describe the subject matter of the claimed invention and the prior art.

206. On information and belief, Doyle personally reviewed and approved papers submitted to the Patent Office during prosecution of the '906 patent.

207. Despite Doyle's and Krueger's extensive personal involvement in the prosecution of application number 08/324,443, which matured into the '906 patent, Doyle and Krueger never disclosed the ViolaWWW browser to the Patent Office during that prosecution.

208. The circumstances of Krueger's and Doyle's actions demonstrate an intent to deceive the Patent Office.

209. On information and belief, during prosecution of the '906 patent, Doyle and Krueger made arguments for patentability that could not have been made if they had disclosed the ViolaWWW browser to the Patent Office.

210. On or about May 6, 1996, the Patent Office rejected several claims as being anticipated by the University of Southern California's "Mercury Project."

211. On or about August 6, 1996, a response to this rejection was submitted to the Patent Office.

212. On information and belief, Doyle personally reviewed and approved the response submitted to the Patent Office on or about August 6, 1996.

213. The response submitted on or about August 6, 1996, included the following statements:

The claimed combination is fundamentally different from the Mercury Project. In the claimed combination, the external object and executable object are embedded by reference in the HTML document and the object is displayed and processed within the same window where a portion of the original document is displayed. In the Mercury Project information is passed back to the server and a new document is generated and displayed. There is no display and processing the external object within the window in which a portion of the original document is displayed.

214. If Doyle, the University, or Krueger had disclosed the ViolaWWW prior art to the Patent Office, it would not have been possible to distinguish the claims of the '906 patent over the prior art on the basis that the prior art failed to disclose "display[ing] and processing the external object within the window in which a portion of the original document is displayed."

215. On or about March 26, 1997, the Patent Office rejected several claims as being obvious in light of "Khoyi et al. US Patent 5,206,951" in combination with other prior art.

216. On or about June 2, 1997, a response to this rejection was submitted to the Patent Office.

217. Doyle and Krueger personally reviewed and approved the response submitted to the Patent Office on or about June 2, 1997.

218. The response submitted on or about June 2, 1997, included the following statements:

[T]here is no suggestion in Khoyi of modifying Mosaic so that an external application . . . is invoked to display and interactively process the object within the document window while the document is displayed by Mosaic in the same window.

219. On information and belief, if Doyle, the University, or Krueger had disclosed the ViolaWWW prior art to the Patent Office, it would not have been possible to distinguish the

claims of the '906 patent over the prior art on the basis that the prior art failed to disclose “an external application [that] is invoked to display and interactively process the object within the document window while the document is displayed by [the browser] in the same window.”

220. On or about August 25, 1997, the Patent Office rejected several claims as being obvious in light of “Koppolu et al. US Patent 5,581,686” in combination with other prior art.

221. On or about December 23, 1997, a response to this rejection was submitted to the Patent Office.

222. On information and belief, Doyle and Krueger personally reviewed and approved the response submitted to the Patent Office on or about December 23 1997.

223. The response submitted on or about December 23, 1997, included the following statements:

[T]here is no disclosure or suggestion in Mosaic or Koppolu of automatically invoking an external application when an embed text format is parsed. Each of those references require user input, specifically clicking with a mouse pointer, to activate external applications to allow display and interaction with an external object.

224. On information and belief, if Doyle, the University, or Krueger had disclosed the ViolaWWW prior art to the Patent Office, it would not have been possible to distinguish the claims of the '906 patent on the basis that the prior art failed to disclose “automatically invoking an external application when an embed text format is parsed.”

225. On information and belief, Doyle's and Krueger's repeated use of arguments that could not have been made if Doyle or Krueger had disclosed the ViolaWWW prior art demonstrates an intent to deceive the Patent Office.

226. On information and belief, Doyle's intent to deceive the Patent Office is also demonstrated by comparing what he told an audience of web developers on or about March 27, 1995, to what he told the Patent Office on or about May 27, 1997.

227. On information and belief, on or about March 27, 1995, Doyle responded to a post on the publicly-accessible WWW-talk e-mail distribution list in which another author had written, under the heading “HotJava is here! And it *rocks*,” “It’s the most exciting thing to happen to the Web since viola.” On information and belief, Doyle’s response included the following statements:

If you take a close look at Java, you’ll realize that it bears a close similarity to Viola, since the “applets” must be coded from a predefined language, downloaded and locally interpreted.

228. On information and belief, on or about May 27, 1997, Doyle signed a declaration that was submitted to the Patent Office. Doyle’s declaration included the following statements:

The three exemplary products which incorporate the features of the claimed invention include Netscape Navigator 2.0 (or newer versions), Java, from Sun Microsystems, and ActiveX, from Microsoft. . . . [T]he success of these products is directly attributable to the claimed features of the invention.

. . . .

A good indicator that Sun Microsystems felt that enabling interactivity in Web pages was the key feature of Java is given in the first chapter of “Hooked on Java,” which was written by members of the original Java development team. They say, “With applets written in the Java programming language, Web users can design Web pages that include animation, graphics, games, and other special effects. **Most important, Java applets can make Web pages highly interactive.**”

This statement shows that the developers of Java felt that the most important feature of the Java technology was the ability of Java to allow an embed text format (the applet tag) within a Web document to be parsed by a Web browser to automatically invoke an external executable application to execute on the client workstation in order to display an external object and enable interactive processing of that object within a display window created at the applet tag’s location within the hypermedia document being displayed in the browser-controlled window. The book’s authors further emphasize the novelty and nonobviousness

of this technology when they say, “Quite simply, Java-powered pages are Web pages that have Java applets embedded in them. They are also the Web pages with the coolest special effects around Remember, **you need a Java-compatible Web browser such as HotJava to view and hear these pages and to interact with them; otherwise, all you'll access is static Web pages** minus the special effects.”

....

The above citations, as well as the additional details given in Appendix A, provide ample evidence of the commercial success of products incorporating features of the claimed invention, as well as evidence of the widespread acclaim that these products have garnered for the technical innovations which the features of the claimed invention allowed them to provide. They further show that the successes of these products was a direct result of the features of the claimed invention, which they incorporated *through implementation of an embed text format that is parsed by a Web browser to automatically invoke an external executable application to execute on the client workstation in order to display an external object and enable interactive processing of that object within a display window created at the embed text format's location within the hypermedia document being displayed in the browser-controlled window.*

229. The declaration Doyle signed on or about May 27, 1997, made no mention of Viola or the ViolaWWW browser.

230. On information and belief, Doyle's and Krueger's disclosure of Java for purposes of commercial success, but not the ViolaWWW browser which Doyle knew was prior art that existed over one year before the application for the '906 patent was filed, demonstrates an intent to deceive the Patent Office, especially given Doyle's belief that Viola was similar to Java and that Java embodied the claimed invention.

231. Between 1999 and 2003, a third party disputed the validity of the '906 patent.

232. On information and belief, Doyle personally guided Eolas through the litigation concerning the validity of the '906 patent.

233. On information and belief, throughout the litigation, the third party asserted that the plotting demo involving the ViolaWWW browser anticipated the asserted claims of the '906 patent.

234. On information and belief, the plotting demo relied on by the third party to prove anticipation of the asserted claims of the '906 patent was the same plotting demo that Pei Wei had repeatedly described to Doyle, and which the Federal Circuit has held was a "public use" on May 7, 1993, 399 F.3d 1325, 1335 (Fed. Cir. 2005), and which Doyle himself came across from his own research into Viola.

235. On information and belief, in its contentions that the plotting demo involving the ViolaWWW browser anticipated the asserted claims of the '906 patent, the third party specifically identified the VOBJF tag, the plot.v file, and the vplot executable application.

236. On information and belief, on or about December 14, 2001, the third party served an expert report by Dr. John P.J. Kelly, that included the following statements:

When ViolaWWW encountered the tag <VOBJF>/usr/work/viola/apps/plot.v</VOBJF>, an embed text format specifying the location of an object, it looked in the specified path for at least part of the object, parsed the path, and automatically loaded the object into the program. The file (plot.v) also contained type information associated with the object, such as the name and location of an external executable application, vplot, that also was automatically invoked to enable display of and user interaction with the object at a location within a display area within the document being displayed in the browser-controlled window corresponding to the location of the embed text format in the document. Subsequently, when the user interacted with the object, ViolaWWW sent messages to vplot based on the user input and received output from vplot, thus updating the display of the object.

237. On information and belief, at a trial in 2003 concerning the validity of the '906 patent, Dr. Kelly testified that the plotting demo involving the ViolaWWW browser anticipated the asserted claims of the '906 patent, and he specifically identified the VOBJF tag, the plot.v file, and the vplot executable application for purposes of his anticipation analysis.

238. On information and belief, Pei Wei also testified at the trial in 2003 about the ViolaWWW browser and the plotting demo.

239. On information and belief, at the trial, exhibit DX34 included source code for the ViolaWWW browser dated May 12, 1993.

240. On information and belief, at the trial, exhibit DX37 included source code for the ViolaWWW browser dated May 27, 1993.

241. On information and belief, DX34 contains the code for the plotting demo that Pei Wei demonstrated to Sun Microsystems on May 7, 1993, in Northern California.

242. On information and belief, DX37 contains code for a plotting demo similar to the plotting demo in DX34.

243. On information and belief, on May 31, 1993, Pei Wei posted DX37 on a publicly-accessible Internet site and notified an engineer at Sun Microsystems that DX37 was available for downloading.

244. On information and belief, under 35 U.S.C. § 102(b), DX37 was a “printed publication” over one year before the application for the ‘906 patent was filed.

245. On information and belief, Dr. Kelly testified that the plotting demo in DX34 and DX37 anticipates the asserted claims of the ‘906 patent. Dr. Kelly specifically identified the VOBJF tag, the plot.v file, and the vplot executable application for purposes of his anticipation analysis of DX37.

246. The Federal Circuit has held that Dr. Kelly’s testimony would allow a reasonable jury to conclude that DX37 anticipates at least claims 1 and 6 of the ‘906 patent. *See* 399 F.3d 1325, 1335 (Fed. Cir. 2005).

247. On information and belief, neither Dr. Kelly nor the third party ever relied on anything other than the plotting demo involving plot.v and vplot to prove anticipation by the ViolaWWW browser.

248. On information and belief, Dr. Kelly never discussed clock.v during the trial in July and August 2003.

249. On information and belief, Doyle attended the trial involving the third party held in July and August 2003.

250. On information and belief, by the end of the trial in August 2003, Doyle knew about and understood the third party's contention that the plotting demo involving the ViolaWWW browser in DX37 anticipated the asserted claims of the '906 patent.

251. On information and belief, by the end of the trial in August 2003, Doyle and the University knew about and understood Pei Wei's testimony that on May 31, 1993 — over one year before the application for the '906 patent was filed — he posted DX37 on a publicly-accessible Internet site and notified an engineer at Sun Microsystems that DX37 was available for downloading.

252. On or about October 30, 2003, the Director of the Patent Office initiated a reexamination of the '906 patent. The control number for this reexamination was 90/006,831.

253. On information and belief, during the 2003 reexamination, Doyle, the University, and Krueger withheld information about the ViolaWWW browser with the specific intent to deceive the Patent Office.

254. On information and belief, Doyle and the University had a financial interest in the patentability of the claimed inventions in the '906 patent.

255. On information and belief, the ViolaWWW browser threatened the patentability of the claimed inventions in the '906 patent, and thus threatened Doyle's financial interests.

256. On information and belief, Doyle and Krueger were personally involved in the 2003 reexamination of the '906 patent.

257. On information and belief, on or about April 27, 2004, Doyle and Krueger participated in an examiner interview in an effort to confirm the patentability of the claims of the '906 patent application. On information and belief, Doyle gave the examiner a presentation supported by approximately 22 slides prepared by Doyle and Krueger, none of which discussed DX37 or the ViolaWWW browser. On information and belief, neither Doyle nor Krueger mentioned the ViolaWWW browser during the interview.

258. On or about May 6, 2004, Doyle signed a declaration that was submitted to the Patent Office in an effort to confirm the patentability of the claims of the '906 patent application. This declaration made no mention of DX37 or the ViolaWWW browser.

259. On information and belief, on or about August 18, 2005, Doyle and Kreuger participated in an examiner interview in an effort to confirm the patentability of the claims of the '906 patent application. On information and belief, Doyle gave the examiner a presentation supported by approximately 36 slides, none of which discussed DX37 or the ViolaWWW browser.

260. On information and belief, during the 2003 reexamination, Doyle and Krueger submitted selected information from the litigation with the third party concerning the validity of the '906 patent, but they withheld information that would have identified for the examiner the key features of the prior art ViolaWWW browser and how they matched up to the asserted claims of the '906 patent. On information and belief, this proved critical during the 2003 reexamination because when the examiner decided to look at the source code for the ViolaWWW browser, he missed the key points.

261. On information and belief, on or about December 30, 2003, Doyle and Krueger submitted to the Patent Office a CD containing two compressed zip files, one for the "DX34" version of the ViolaWWW source code dated May 12, 1993, and the other for the "DX37" version of the ViolaWWW source code dated May 27, 1993.

262. On information and belief, the compressed zip file for DX34 that Doyle and Krueger submitted to the Patent Office was named viola930512.tar.gz.zip. When unzipped, it contained 1,027 files in 35 folders consisting of 8 total megabytes in size.

263. On information and belief, the compressed zip file for DX37 that Doyle and Krueger submitted to the Patent Office was named violaTOGO.tar.Z.zip. When unzipped, it contained 1,030 files in 34 folders consisting of 7.7 total megabytes in size.

264. On information and belief, DX34 and DX37 contained source code for the ViolaWWW browser.

265. Source code cannot be executed by a computer. Source code must be compiled into binary code before it can be executed by a computer.

266. On information and belief, without the compiled binary code, and without a suitable computer capable of executing that binary code (such as a Sun SPARCstation from the early 1990s), the Patent Office had no practical way to see the ViolaWWW browser in operation.

267. On information and belief, given the voluminous nature of the contents of DX34 and DX37, and the practical inability of the Patent Office to run the ViolaWWW browser on a computer, it was especially important for Doyle and Krueger to be candid with the Patent Office about the contents of DX34 and DX37 so that the Patent Office could focus on the relevant files.

268. On information and belief, Doyle and Krueger were not candid and instead withheld material information that would have assisted the Patent Office in understanding the contents of DX34 and DX37.

269. On information and belief, Doyle and Krueger did not disclose the full contents of DX34 and DX37 in their entirety to the Patent Office during the first reexamination of the '906 patent.

270. On information and belief, the full contents of DX34 and DX37 were not submitted in their entirety until the Invention Disclosure Statement filed on November 1, 2006.

271. On information and belief, during the 2003 reexamination, neither Doyle or Krueger disclosed to the Patent Office the trial testimony of Pei Wei, who testified about the plotting demo in DX34 and DX37; did not disclose the trial testimony of Dr. Kelly, who testified that the plotting demo in DX34 and DX37 anticipated the asserted claims of the '906 patent; and did not disclose that Dr. Kelly specifically identified the VOBJF tag, the plot.v file, and the vplot executable application for purposes of his anticipation analysis.

272. On March 2, 2005 — while the 2003 reexamination was still pending — the Federal Circuit held that Dr. Kelly's testimony would allow a reasonable jury to conclude that DX37 anticipates at least claims 1 and 6 of the '906 patent. 399 F.3d 1325, 1335 (Fed. Cir. 2005).

273. Even after the Federal Circuit's decision, however, Doyle and Krueger still did not disclose Dr. Kelly's testimony to the Patent Office during the 2003 reexamination, nor did they disclose to the Patent Office that Dr. Kelly's anticipation analysis relied upon the VOBJF tag, the plot.v file, and the vplot executable application.

274. On or about September 27, 2005, the examiner issued a statement for reasons of patentability in which the examiner confirmed the patentability of claims 1–10 of the '906 patent.

275. On information and belief, the examiner's statement never discussed the plotting demo that Dr. Kelly had testified anticipated the asserted claims of the '906 patent.

276. On information and belief, when the examiner considered DX37, the examiner did not know where to look or what to look for. There were too many files in DX37 for the examiner to read himself. Thus the examiner was forced to resort to running text searches across all the files in DX37 in the hope of stumbling across relevant information.

277. The examiner used the "dtSearch" program to index and text search all DX37 files that contained textual content. See <http://www.dtsearch.com/>.

278. It is unclear what words the examiner searched for or how he came up with his search terms.

279. On information and belief, Doyle knew precisely what to look for, but he never told the examiner. On information and belief, for example, if Doyle or Krueger had told the examiner to look for plot.v, the examiner's text searches would have quickly found the plotting demo that Dr. Kelly had testified anticipated the asserted claims of the '906 patent.

280. On information and belief, the examiner's text searches did not lead him to the plotting demo, but instead led him to a clock application that used the file clock.v.

281. On information and belief, the file clock.v is a script file that displays the image of a clock. On information and belief, the clock application does not involve any separate executable application. On information and belief, it just involves a webpage and the clock.v script file.

282. The examiner reasoned that a script file like clock.v does not satisfy the “executable application” requirement of the claims of the ‘906 patent, and thus the examiner concluded that DX37 does not anticipate the asserted claims of the ‘906 patent.

283. On information and belief, the ViolaWWW source code teaches two ways of creating interactive webpages using embedded applications. On information and belief, one way is by using a simple script file, such as clock.v. On information and belief, all that is required is a webpage (such as violaApps.html) and the script file (such as clock.v). On information and belief, no binary executable application is involved. On information and belief, the other way taught by the ViolaWWW source code does use a binary executable application (such as vplot) in addition to a webpage and a file that contains the object (such as plot.v). On information and belief, the examiner did not consider this second way during the 2003 reexamination; he only considered the first way, and thus erroneously confirmed the patentability of the asserted claims of the ‘906 patent.

284. The examiner’s reasons for patentability included the following statements:

The Viola system uses “C-like” Viola scripts that must be INTERPRETED by the browser and then TRANSLATED or CONVERTED into binary native executable machine code that can be understood by the CPU. Alternately, the Viola script is precompiled into intermediate byte-code form and the byte-code is interpreted (i.e., translated) into binary native executable machine code at runtime. This extra step of translation results in an unavoidable performance penalty, as interpreted applications run much slower than compiled native binary executable applications.

Accordingly, the “C-like” Viola scripts (or corresponding byte-code representations) are not “executable applications”

285. On information and belief, the examiner’s reasoning overlooked the fact that the plotting demo in DX37 does use a separate executable application: vplot.

286. On information and belief, Doyle and Krueger knew that the plotting demo used a separate executable application, but Doyle and Krueger did not bring this fact to the examiner's attention and instead allowed the examiner to confirm the patentability of the claims of the '906 patent on the basis of an incomplete understanding of DX37.

287. On information and belief, Doyle and Krueger knew that the plotting demo used a separate executable application for at least the following reasons:

a. On information and belief, the August 1994 Viola paper, which states "This next mini application front-ends a graphing process (on the same machine as the viola process)" and which shows the plot of a fighter jet in a window titled "XPlot."

b. On information and belief, Pei Wei's message to Doyle on September 1, 1994, which included the following statements: "[A]s for the plotting demo, it actually is really just a front-end that fires up a back-end plotting program (and the point is that that back-end could very well be running on a remote super computer instead of the localhost). For that demo, there is a simple protocol such that the front-end app could pass an X window ID to the back-end, and the back-end draws the graphics directly onto the window violaWWW has opened for it."

c. On information and belief, the source code listed in the "Viola stuff" file included the file plotDemo.html, which states, "This is a demo of ViolaWWW embedding a viola front-ending object that is programmed to start up and communicate with a plot process. The front-end tells the plot program the window ID to draw to, and gives it the camera coordinate changes." When the file plotDemo.html is parsed, it shows the plot of a fighter jet in a window titled "XPlot."

d. On information and belief, Pei Wei's presentation at Stanford in September 1994, which included the following statements: "The next example is a front-end application to a backend. And the back-end is what actually does the computation and the drawing." On information and belief, included with the presentation was a screenshot of the ViolaWWW browser after parsing the file plotDemo.html. The screenshot shows the plot of a fighter jet in a window titled "XPlot." The text in the webpage states, "This is a demo of ViolaWWW embedding a viola front-ending object that is programmed to start up and communicate with a plot process. The front-end tells the plot program the window ID to draw to, and gives it the camera coordinate changes."

e. On information and belief, the trial testimony of Pei Wei.

f. On information and belief, the expert opinion of Dr. Kelly.

288. On information and belief, Doyle's, the University's, and Krueger's failure to tell the examiner about the vplot and plot.v files, and failure to disclose documents from the litigation that identified how Dr. Kelly matched up the plotting demo in DX37 with the claims of the '906 patent, both alone and in combination with Doyle's and Krueger's prior failure to disclose the ViolaWWW browser during the original prosecution of the '906 patent, constituted a knowing and intentional violation of their duty of candor and good faith in dealing with the Patent Office.

289. On information and belief, the Patent Office would not have confirmed the patentability of the claims of the '906 patent that were the subject of the 2003 reexamination if Doyle and Krueger had not engaged in inequitable conduct and instead had fulfilled their duty of candor and good faith in dealing with the Patent Office.

290. On or about December 22, 2005, a third party filed a request to reexamine the '906 patent.

291. On or about February 9, 2006, the Patent Office granted the request to reexamine the '906 patent. The control number for this reexamination was 90/007,858.

292. On information and belief, Doyle had a financial interest in the patentability of the claimed inventions in the '906 patent.

293. On information and belief, the ViolaWWW browser threatened the patentability of the claimed inventions in the '906 patent, and thus threatened Doyle's financial interests.

294. On information and belief, Doyle and Krueger were personally involved in the 2005 reexamination of the '906 patent.

295. For example, on or about September 6, 2007, Doyle and Krueger participated in an examiner interview in an effort to confirm the patentability of the claims of the '906 patent application.

296. On or about October 1, 2007, Doyle submitted a declaration to the Patent Office in an effort to establish an earlier date of invention for the claims of the '906 patent application.

297. On or about May 9, 2008, Doyle and Krueger participated in another examiner interview in an effort to confirm the patentability of the claims of the '906 patent application.

298. On or about June 3, 2008, Doyle and Krueger participated in another examiner interview in an effort to confirm the patentability of the claims of the '906 patent application.

299. On information and belief, Doyle's and Krueger's inequitable conduct during the 2003 reexamination infected the 2005 reexamination.

300. On information and belief, although Doyle and Krueger disclosed material information about the ViolaWWW browser to the Patent Office during the 2005 reexamination, by that time it was too late.

301. On information and belief, Doyle and Krueger disclosed the August 1994 Viola paper to the Patent Office on or about August 21, 2006.

302. On information and belief, this was the first time Doyle and Krueger had disclosed the August 1994 Viola paper to the Patent Office.

303. On information and belief, Doyle knew about the Viola paper no later than August 31, 1994, but Doyle waited over 10 years — and two prosecutions of the ‘906 patent — to disclose that paper to the Patent Office.

304. On information and belief, Krueger knew about the August 1994 Viola paper no later than August of 1998, but waited 8 years – and two prosecutions of the ‘906 patent – to disclose that paper to the Patent Office.

305. On information and belief, shortly after Doyle and Krueger disclosed the August 1994 Viola paper to the Patent Office during the 2005 reexamination, the Patent Office rejected all claims of the ‘906 patent.

306. On information and belief, in particular, on or about July 30, 2007, the Patent Office rejected all claims of the ‘906 patent as being anticipated by DX95, which includes a copy of the text found in Pei Wei’s August 1994 Viola paper.

307. On information and belief, the rejection based on the August 1994 Viola confirms that the ViolaWWW browser was material prior art.

308. Doyle and Krueger did not respond to the merits of the rejection based on the August 1994 Viola paper, however. Instead Doyle filed a declaration asserting that his date of invention was before August 16, 1994.

309. In response to Doyle’s declaration, the examiner withdrew the rejection based on the August 1994 Viola paper.

310. On information and belief, the 2005 examiner could have entered a new rejection based on DX37, which was a printed publication before the alleged conception of the inventions claimed in the ‘906 patent, but the 2005 examiner did not independently examine DX37 because the 2003 examiner had already concluded that DX37 did not invalidate the asserted claims of the ‘906 patent.

311. On information and belief, the conclusions about DX37 reached in the 2003 reexamination were erroneous due to Doyle’s, the University’s, and Krueger’s inequitable conduct during that reexamination.

312. Thus, Doyle's, the University's, and Krueger's inequitable conduct during the 2003 reexamination infected the 2005 reexamination.

313. During the original prosecution of the '906 patent, Doyle submitted a declaration to the Patent Office containing false and misleading statements in an effort to obtain allowance of the claims.

314. Specifically, on or about June 2, 1997, Doyle submitted to the Patent Office a sworn declaration executed on or about May 27, 1997, for the purpose of overcoming the examiner's rejection on March 26, 1997.

315. On page 12 of the declaration, Doyle asserted that his claimed invention would not have been obvious over the cited prior art in view of "secondary considerations, including, in part, commercial success of products incorporating features of the claimed invention and industry recognition of the innovative nature of these products."

316. In support of his assertion, Doyle declared to the Patent Office that Sun Microsystems and Netscape had incorporated his invention into their Java software and Navigator Web browser, respectively. He stated: "Approximately 12 to 18 months after the applicants initially demonstrated the first Web plug-in and applet technology to the founders of Netscape and engineers employed by Sun Microsystems in November and December of 1993, as described in reference #4 from Appendix A (Dr. Dobb's Journal, 2/96), both Netscape and Sun released software products that incorporated features of the claimed invention"

317. On information and belief, this statement was false. On information and belief, neither Doyle nor any of the other named inventors of the '906 patent demonstrated Web plug-in technology to any of the founders of Netscape in November or December of 1993.

318. On information and belief, when Doyle made these statements under oath, he also did not know whether any engineer employed by Sun Microsystems ever saw any of his demonstrations in November or December of 1993.

319. On information and belief, Doyle made these same false assertions in slides that he prepared and presented to the examiner in a personal interview on or about February 24, 1997.

On information and belief, on a slide entitled “Relevant History of DHOE” (Doyle’s name for his invention), Doyle included as a bullet point: “1993 Demos to Sun & Netscape’s Founders.”

320. On information and belief, Doyle’s false statements in his declaration were material to the patentability of the pending claims. These statements purported to provide evidence of copying by others and thus objective evidence of nonobviousness, a factor to be considered in determining whether an alleged invention is patentable over the prior art. On information and belief, without these false assertions, Doyle had no support for his argument that Netscape and Sun copied his alleged invention or that his technology was responsible for their commercial success.

321. On information and belief, by making these false statements under oath to the Patent Office, Doyle intended to mislead the Patent Office to believe that responsible persons at Netscape and Sun saw his alleged invention, appreciated its supposed merits, and therefore incorporated it into the Navigator browser and Java. On information and belief, moreover, by making these false statements, Doyle was trying to convince the Patent Office that the Netscape and Sun products succeeded because they incorporated his alleged invention.

322. On information and belief, Doyle’s submission of false statements under oath in his declaration to the Patent Office constituted a knowing and intentional violation of his duty of candor and good faith in dealing with the Patent Office.

323. Because Doyle, the University, and Krueger committed inequitable conduct during prosecution reexamination of the ‘906 patent (reexamination application number 90/006,831), every claim of the ‘906 patent is unenforceable in its entirety. The inequitable conduct also renders unenforceable all claims that issue as a result of any reissue and reexamination proceedings, including claims that issued from the reexaminations of the ‘906 patent (reexamination application numbers 90/006,831 and 90/007,858).

324. The ‘985 patent is likewise unenforceable in its entirety due to Doyle’s, the University’s, and Krueger’s inequitable conduct during the prosecution of the application that the

issued as the '906 patent and Doyle's and Krueger's inequitable conduct during the first reexamination of the '906 patent (reexamination application number 90/006,831).

325. Doyle's, the University's, and Krueger's inequitable conduct during prosecution of the application that issued as the '906 patent relates, both immediately and necessarily, to the claims of the '985 patent.

326. Doyle's, the University's, and Krueger's inequitable conduct during the first reexamination of the '906 patent (reexamination application number 90/006,831) relates, both immediately and necessarily, to the claims of the '985 patent.

327. The '985 patent issued from an application that was a continuation application of a continuation application of the application that issued as the '906 patent, and the '985 patent claims priority to the '906 patent. The '906 patent and the '985 patent share the same specification.

328. On July 20, 2004, the PTO determined that the claims pending in the application that issued as the '985 patent were identical in scope to or were obvious variations of the then-issued claims of the '906 patent, which were confirmed in the first reexamination of the '906 patent (reexamination application number 90/006,831) on June 6, 2006. Accordingly, the PTO rejected the pending claims under the doctrines of statutory double-patenting and obviousness-type double-patenting.

329. On March 11, 2005, to overcome the double-patenting rejections, the owner of the '985 patent cancelled one pending claim and filed a terminal disclaimer for the remaining claims. It was not argued that the pending claims were patentably distinct from the then-issued claims of the '906 patent.

330. A judicial determination of the respective rights of the parties with respect to the unenforceability of the claims of the '906 and '985 patents is now necessary and appropriate under 28 U.S.C. § 2201.

ELEVENTH DEFENSE

331. To the extent that Plaintiff's claims are based on acts performed by the Microsoft Explorer browser or a user's use thereof, there can be no direct, and, therefore, no indirect infringement due to Microsoft's purported license to the '906 Patent and/or to the '985 Patent.

TWELFTH DEFENSE

332. Plaintiff's claims are barred in whole or in part by the equitable doctrines of laches and/or unclean hands.

THIRTEENTH DEFENSE

333. To the extent Eolas seeks damages for alleged infringement more than six years prior to filing of this action, the relief sought by Eolas is barred by 35 U.S.C. § 286, 287 and 288.

FOURTEENTH DEFENSE

334. Eolas' claims are improper to the extent that Eolas seeks asserted infringement of claims that are subject to the intervening rights of JCP.

FIFTEENTH DEFENSE

335. Eolas' claims against JCP are barred to the extent that Eolas lacks standing to sue for infringement of the '906 patent or the '985 patent.

SIXTEENTH DEFENSE

336. Eolas' claims against JCP are barred by the doctrine of patent exhaustion to the extent Eolas has already relinquished its rights to the '906 patent or the '985 patent.

SEVENTEENTH DEFENSE

337. Eolas' claims against JCP are barred to the extent that JCP is a third-party beneficiary to a license/agreement granting rights to the '906 patent or the '985 patent.

EIGHTEENTH DEFENSE

338. Eolas' claims against JCP are barred by the doctrine of equitable estoppels.

COUNTERCLAIMS

339. JCP incorporates its responses as set forth above as though fully set forth herein.

340. JCP has not directly or indirectly infringed, contributed to or induced infringement of any valid or enforceable claim of the '906 Patent or the '985 Patent, and has not otherwise committed any acts in violation of 35 U.S.C. §271.

341. The '906 Patent and the '985 Patent, and every claim thereof, are invalid for failing to meet the conditions for patentability as set forth in 35 U.S.C. §§100, 101, 102, 103 and 112.

342. An actual controversy exists between JCP and Plaintiff concerning the alleged infringement and validity of the '906 Patent and the '985 Patent by virtue of Plaintiff's Complaint herein.

343. JCP is entitled to judgment from this Court that no claim of either of the '906 Patent or the '985 Patent has been infringed by JCP, and that all claims are invalid.

344. The '906 patent and the '985 patent are unenforceable due to inequitable conduct as alleged above, which are incorporated hereby reference.

345. This is an exceptional case entitling JCP to an award of its attorney's fees incurred in connection with this action pursuant to 35 U.S.C. §285.

346. JCP continues to investigate this matter and reserves the right to amend its Answer and/or Counterclaims to assert any additional defenses or counterclaims that come to light upon further investigation and discovery.

PRAYER FOR RELIEF

WHEREFORE, JCP prays that:

347. the Court dismiss the Complaint against JCP with prejudice;
348. the Court declare that JCP has not and does not infringe the '906 Patent or the '985 Patent;
349. the Court declare that the '906 Patent and the '985 Patent are invalid;
350. the Court declare that Eolas is not entitled to any remedy or relief whatsoever against JCP;
351. the Court award JCP its costs, together with reasonable attorneys' fees and all of its expenses for this suit because this is an exceptional case under 35 U.S.C. §285; and
352. the Court award JCP such other relief as this Court may deem just and proper at law or in equity.

Dated: January 17, 2012
