Summary

By creating a browser called Viola in the early 1990's, I developed one of the first graphical web browsers, and most notably the first implementation of applets. See www.viola.org.

Much of this work was done as part of my work at O'Reilly & Associates, which was a great place to observe and cultivate innovation, particularly internet and knowledge processing related technology.

Recently, I was involved as consultant and fact witness for Microsoft on the Eolas case. The embedded interactive prior art in the Viola browser is helping to overturn the Eolas verdict and patent.

I've also worked at Global Network Navigator (America Online), which was one of the earliest commercial websites, creating a web resource directory.

At Internet Archive / Alexa Internet, I gained some invaluable insights in the field of knowledge processing technology.

As an architect at PalmSource, my professional experience turned more towards the PDA and mobile space. This career path has lead me to my current position with ACCESS Inc, a maker of embedded web browsers and creator of i-mode. www.access-us-inc.com

My other interests: search technology, semantic web.

Specialties

Innovating and creating new products;
Web browser, mobile phone and PDA technology
