		 <p>The screenshot shows a webcast interface in a Mozilla Firefox browser. The main slide is titled "Sun Upgrade Advantage Program" and "Improved Datacenter Lifecycle Management" by Craig Churchill, Global Director of Installed Base Marketing at Sun Microsystems, Inc. A list of 11 segments is displayed on the right, with the first 10 segments highlighted in a red box. The video player controls at the bottom are also highlighted in a red box.</p> <p><b>SEGMENTS</b></p> <ol style="list-style-type: none"> <li>1. Introduction</li> <li>2. Why Should We Upgrade?</li> <li>3. What Are the Challenges?</li> <li>4. How Can Sun Help?</li> <li>5. Sun Upgrade Advantage Program</li> <li>6. Common Upgrade Scenarios</li> <li>7. Trade-in Calculator</li> <li>8. Do the Math - Step 1</li> <li>9. Do the Math - Step 2</li> <li>10. Get Going!</li> <li>11. Conclusion</li> </ol> <p><b>Source:</b> <a href="http://webcast-west.sun.com/interactive/09B01894_51/">http://webcast-west.sun.com/interactive/09B01894_51/</a></p>

2a	interactively controlling said controllable application on said client workstation via inter-process communications between said browser and said controllable application.	Users of Sun's websites, the websites themselves and/or the servers hosting those websites (and/or the combination thereof), operate in a hypermedia network environment that includes client workstations executing browsers. Sun's servers transmit a series of communications to client workstations in the distributed hypermedia network. Sun's servers format the communications so that there is interactive control of said controllable application on said client workstation via inter-process communications between said browser and said controllable application. In addition, Sun provides the infrastructure (e.g. servers, Sun's websites, etc.), in addition to instructions to users, and causes them to use Sun's websites in an infringing manner in its default and expected use.

		 <p>The top screenshot shows the rear panels of two Sun SPARC Enterprise servers: the T5140 and T5240. The ILOM Service Processor is highlighted with a red box on the T5240 server. The bottom screenshot shows the same servers, but the ILOM Service Processor is highlighted with a red box, and a video player is shown with the title "&gt; ILOM Service Processor" and a timestamp of "00:04 / 00:15". Below the video player, the text reads: "The ILOM service processor serial and 10/100 ethernet management ports (R6), provide management access to the server once power is plugged into the chassis."</p> <p><b>Source:</b> <a href="http://www.sun.com/servers/coolthreads/t5140/gallery/index.xml?p=1&amp;s=2">http://www.sun.com/servers/coolthreads/t5140/gallery/index.xml?p=1&amp;s=2</a></p>
