

EXHIBIT A

February 2, 2011 Revisions to Defendants' Proposal in the Joint Claim Construction and Prehearing Statement

<u>Claim Term(s)</u>	<u>Eolas' Proposal</u>	<u>Defendants' Proposal</u>
executable application	any computer program code, that is not the operating system or a utility, that is launched to enable an end-user to directly interact with data.	a compiled native binary program, designed to help users perform certain tasks, that remains discrete and separate from the browser application, and is not [part of an] the operating system, a utility, or a library [utility]
automatically [invoking / invoke] [the / said] executable application	automatically calling or activating the <u>executable application</u> .	in response to the browser parsing an embed text format, the executable application is launched to permit a user to interact with the object immediately, without any intervening activation of the object by the user
executable application is automatically invoked by the browser	<u>executable application</u> is automatically called or activated by the browser.	
text format	text that initiates processing.	a predefined set of tags or symbols that specify the formatting of a document [formatting]
embed text format	<u>text format</u> for embedding an <u>object</u> .	a tag [located at the place in the received document where] that specifies the [embedded] object to be embedded at the location of [will appear within] the tag [displayed document]
embed text format, located at a first location in said first distributed hypermedia document	<u>embed text format</u> located at a first location in the <u>first distributed hypermedia document</u> .	embed text format [tag] located at the place in the received document where the embedded object will appear within the displayed document

<u>Claim Term(s)</u>	<u>Eolas' Proposal</u>	<u>Defendants' Proposal</u>
embed text format [which] correspond[s/ing] to [a / said] first location in the document	<u>embed text format</u> which relates to a first location in the document.	embed text format [tag] located at the place in the received file where the embedded object will appear within the displayed document
object	text, images, sound files, video data, documents or other types of information that is presentable to a user of a computer system.	information [presentable] capable of being retrieved and presented to a user of a computer system, which is not a program and which does not include source code or byte code
specifies the location of at least a portion of [an / said] object	specifies the location of at least part of an <u>object</u> .	Specifies the location of at least a portion of [an / said] object. ¹
identify[ing] an embed text format	identifying an <u>embed text format</u> .	detecting an embed text format during parsing of a hypermedia document
an embed text format . . . is identified	an <u>embed text format</u> is identified.	
distributed application	an application that may be broken up and performed among two or more computers.	[an] application [in which] external to the browser, where application tasks that could be performed on a single computer are instead broken up and performed at the same time on both the client workstation and one or more [in parallel on two or more] computers that are remote to the client workstation

¹ Where “specifies” has its common meaning: “to name or state explicitly or in detail.” (See MERRIAM-WEBSTER’S COLLEGIATE DICTIONARY 9th Edition (1991)).

<u>Claim Term(s)</u>	<u>Eolas' Proposal</u>	<u>Defendants' Proposal</u>
client workstation	a computer system connected to a network that serves the role of an information requester	a desktop or desktside computer with an operating system and hardware designed for technical or scientific applications that provides higher performance than a personal computer
network server	a computer system that serves the role of an information provider	a computer running software that is capable of executing applications responsive to requests from a client workstation, and that processes commands from a client workstation to locate and retrieve documents or files from storage
[first] hypermedia document	a document that allows a user to click on images, sound icons, video icons, etc., that link to other objects of various media types, such as additional graphics, sound video, text, or hypermedia or hypertext documents	a document received by the browser that includes [hyper]links (specified by the hypertext format) to graphics, sound, video or other media
[first] distributed hypermedia document	<u>[first] hypermedia document</u> that allows a user to access a remote data object over a network.	
file containing information to enable a browser application to display [, on] [said/the] [client workstation,] at least [a / said] portion of [a / said] distributed hypermedia document	the file contains information to allow the browser application to display at least part of a <u>distributed hypermedia document</u> .	a document [file containing information] received by the browser that includes [hyper] links (specified by the hypertext format) to graphics, sound, video or other media
