Subject: RE: Eolas - eBay Source Code Production

Andrew,

Your bald assertion that "eBay has produced HTML and JavaScript from each of the websites identified on your April 26, 2011 letter and in Eolas' infringement contentions" fails to address the issues detailed in my April 26 correspondence. Prior to Eolas' most recent source code review Eolas sent eBay correspondence on March 30 outlining the code it expected to see. Eolas' onsite reviewers thereafter attempted to work with you to locate the requested code on the source code computer on April 18-21. Finally, I have pinpointed the requested code with screenshots and filenames in my April 26 correspondence. In response to each of these communications, eBay has simply restated that its has already produced the code Eolas seeks.

If we can't see the code you claim is present and you cannot point us to it we simply do not think it is there and cannot confirm your claims of an adequate production. If the requested code is present please simply tell us where it is (*e.g.*, by directory name). Otherwise, the parties are at an impasse.

Please provide the availability of your lead and local counsel to meet and confer in advance of Eolas bringing this matter before the Court. Given the impending deadline for expert reports your prompt attention to this matter is warranted.

Matt,

Your April 26, 2011 letter incorrectly states that we were unable to point your technical team to the code that "embeds Flash objects" for the accused websites and that such code was missing. In fact, we do not have an obligation to lead your technical team through the source code and we did not attempt to do so. As your letter recognizes that we have explained before, eBay has produced and/or made available code that implements the functionality eBay understands is accused of infringement, including the infrastructure code used for "embed[ing] Flash objects." Furthermore, eBay has produced HTML and JavaScript from each of the websites identified on your April 26, 2011 letter and in Eolas' infringement contentions. To the extent there is some additional code you believe you need, please let us know specifically what it is and we are of course available to discuss further.

Best,
Andrew

Weil
