```

1   Just think of a simple example, right?

2   If one of my kids came to me and they just -- I gave

3   them a cookie. They eat the cookie, and they said:

4   Dad, may I have another cookie, or may I have an

5   additional cookie? How do you think they would react if

6   I said: The additional cookie that you can have is the

7   one you just ate?

8   Does that make any sense to you? Right?

9   Additional is more. It's additional.

10   It's extra. It's something -- it's another. It's not

11   the same thing.

12   And what Wi-LAN would have you believe is

13   that you could take one code and call it two things.

14   That's not additional; it's not another;

15   it's not extra; it does not meet structure in the entire

16   purpose of these claims.

17   So now what I'd like to do is, I'd like

18   to explain, starting from the background, why does two

19   matter? Why is it this way?

20   And so let's start with what Airspan was

21   trying to do. They were trying to do a fixed access

22   system. That's what we see right over here. It's a

23   fixed system, okay?

24   If we see -- look into the document, we

25   can see right over here, it's for fixed end-users. It's
