GLOBAL STAGE FOR INNOVATION

Tablet PCs Take CES Spotlight

By Joseph Palenchar
LAS VEGAS – With predictions of a booming market for tablet PCs in 2011, dozens of suppliers are rushing to enter the category or expand their selections during International CES this week. Companies entering the U.S. market at CES include e-reader supplier Aluratek, Coby, Cydle, Enspert, Lenovo, Naxa, Noah, Sungale, Toshiba, Vizio and iStation, which is showing a glasses-free 3D model. ViewSonic and Creative Labs, which announced products in late 2010, will show them for the first time; Lenovo will launch consumer and business tablets; and Augen and Digital Gadgets, which markets under the licensed Sylvania name, will also have new tablets on tap. **Go to page 4 to see what all the buzz is about.**

Seoul-based Enspert is bringing its Android 2.2-based Identity Tab to the U.S. with Wi-Fi and plans a 3G/Wi-Fi version.

iStation plans delivery of the Zood 3D tablet with polarized glass to display 3D images without glasses.

New TVs Get Smart, And Add Passive 3D Technology

By Greg Tarr
LAS VEGAS – Flat-panel TV enters yet another phase at International CES 2011 as more manufacturers showcase offerings with 3D TV and connected Internet streaming capabilities. In fact, among the hottest trends at the show is the development of “smart TVs” with much the same functionality as apps-powered smartphones, including the ability to stream video, music and photo content from “the clouds” of literally hundreds of online content suppliers. Meanwhile, the second year of the new 3D TV era gets a little more complicated this week as multiple manufacturers begin to introduce additional technology options to get around some of the issues of cost, comfort and style associated with 3D active-shutter glasses.

LG's LW5600 series 3D edge-lit LED TVs are among three lines of Cinema 3D sets using passive 3D glasses (below).

Look for entry 3D lines from LG, Toshiba, Vizio and others using “passive” polarized glasses like those used in movie theaters to add yet another dimension to the home entertainment space. **Coverage begins on page 6 and 92**

RETAILING	82
VIDEO	92
DIGITAL IMAGING	100

Toshiba Sets Course, Bows Diverse Line

By Greg Tarr & Doug Olenick
LAS VEGAS – Toshiba is using CES to debut 3D TVs in three formats – glasses free, active shutter and passive glasses – and enter the tablet PC market. Top execs tell TWICE how the recently unified CE and PC operations will now go to market. (PAGE 10)

Herrington Outlines Sharp's A/V Strategies

By Greg Tarr
LAS VEGAS – John Herrington, Sharp Electronics Marketing Company of America president, discusses his company's plans for 2011, and TWICE outlines the company's CES audio and video introductions. (PAGE 12)

Casio's Uniquely Designed TRYX Debuts

By Greg Tarr
LAS VEGAS – Casio proves you can teach an old category new tricks with the Tryx (pronounced the same way), a digicam with an unusual twistable LCD screen design. Toshi Iguuchi, senior GM of Casio digital imaging, explains the concept. (PAGE 18)

HoMedics Adds House Of Marley Headphones

By Lisa Johnston
LAS VEGAS – HoMedics has joined forces with the House of Marley to bring its first headphones to market, a line branded with legendary musician Bob Marley. (SEE PAGE 134)

Big awards come in small packages.

Congratulations to our client Xi3 Corporation* for winning an innovations award in the computer hardware category for the 2011 International CES trade show.
