Re: Wallace Nolen  
DOB 2/10/1950

To whom it may concern,

This gentleman is under my care for colon cancer and is receiving IV chemotherapy every 2 weeks for 2 days at a time. His diarrhea is severe and is worsened while he is on this treatment making it difficult for him to leave his house for extended time periods unless he plans on holding off eating food for a number of hours before departure. This in turn weakens him further, both mentally and physically.

He may not be able to attend hearings or appointments while he is receiving chemotherapy for the next 5 months.
