:t: RE: AIPLA definition of "minimal complexity"

spreadsheet shows the relationship between application generation (initial application through a tenth+ continuation/CIP)
ether the application has 10 or fewer total claims or has more than 10 total claims.

t: FW: AIPLA definition of "minimal complexity"

3ob,
    Can you provide us with data on the number/percent of continuations applicable to --
a) "simple" applications, referenced by AIPLA as those applications having "10 page specification, 10 claims"; and
b) applications that would NOT be affected by the claims requirements (i.e., < 15/75)
    If your answers are percentages, please specify the denominator (e.g., percent of all filings, percent of
ontinuations).
Thanks!

ohn

ubject: AIPLA definition of "minimal complexity"

i the survey question that asks attorneys what their typical charge is for an original, non-provisional utility patent application
ir an invention of minimal complexity, AIPLA provides clarification of minimal complexity as follows: "(e.g., 10 page
pecification, 10 claims)"
