

# Exhibit 8

What is claimed is:

1. A search system comprising:

a scanning system for searching for information relevant to a query associated with a first user in a plurality of users;

a feedback system for receiving information found to be relevant to the query by other users; and

a content-based filter system for combining the information from the feedback system with the information from the scanning system and for filtering the combined information for relevance to at least one of the query and the first user.

#### Summary

If all terms or phrases initially submitted by Defendants received proposed constructions:

- only 3 words out of the entire claim would not be construed (not including the preamble);
- 9 words or phrases would be construed at least two times;
- 5 words or phrases would be construed at least three times;
- 3 words or phrases would be construed at least four times; and
- 2 words or phrases would be construed five times.
